

How to automatically test and validate your backup and recovery strategy

Ruben.Gaspar.Aparicio@cern.ch

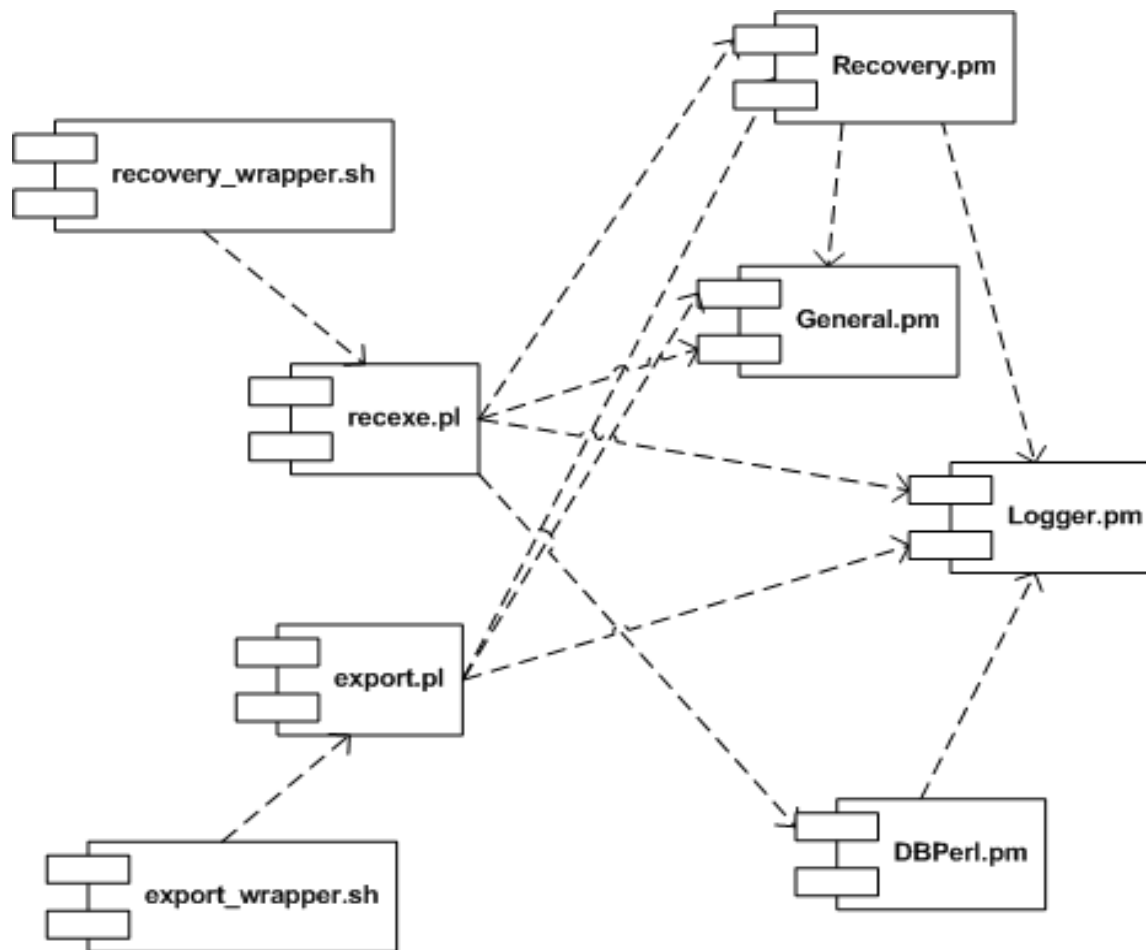

November 17th, 2010

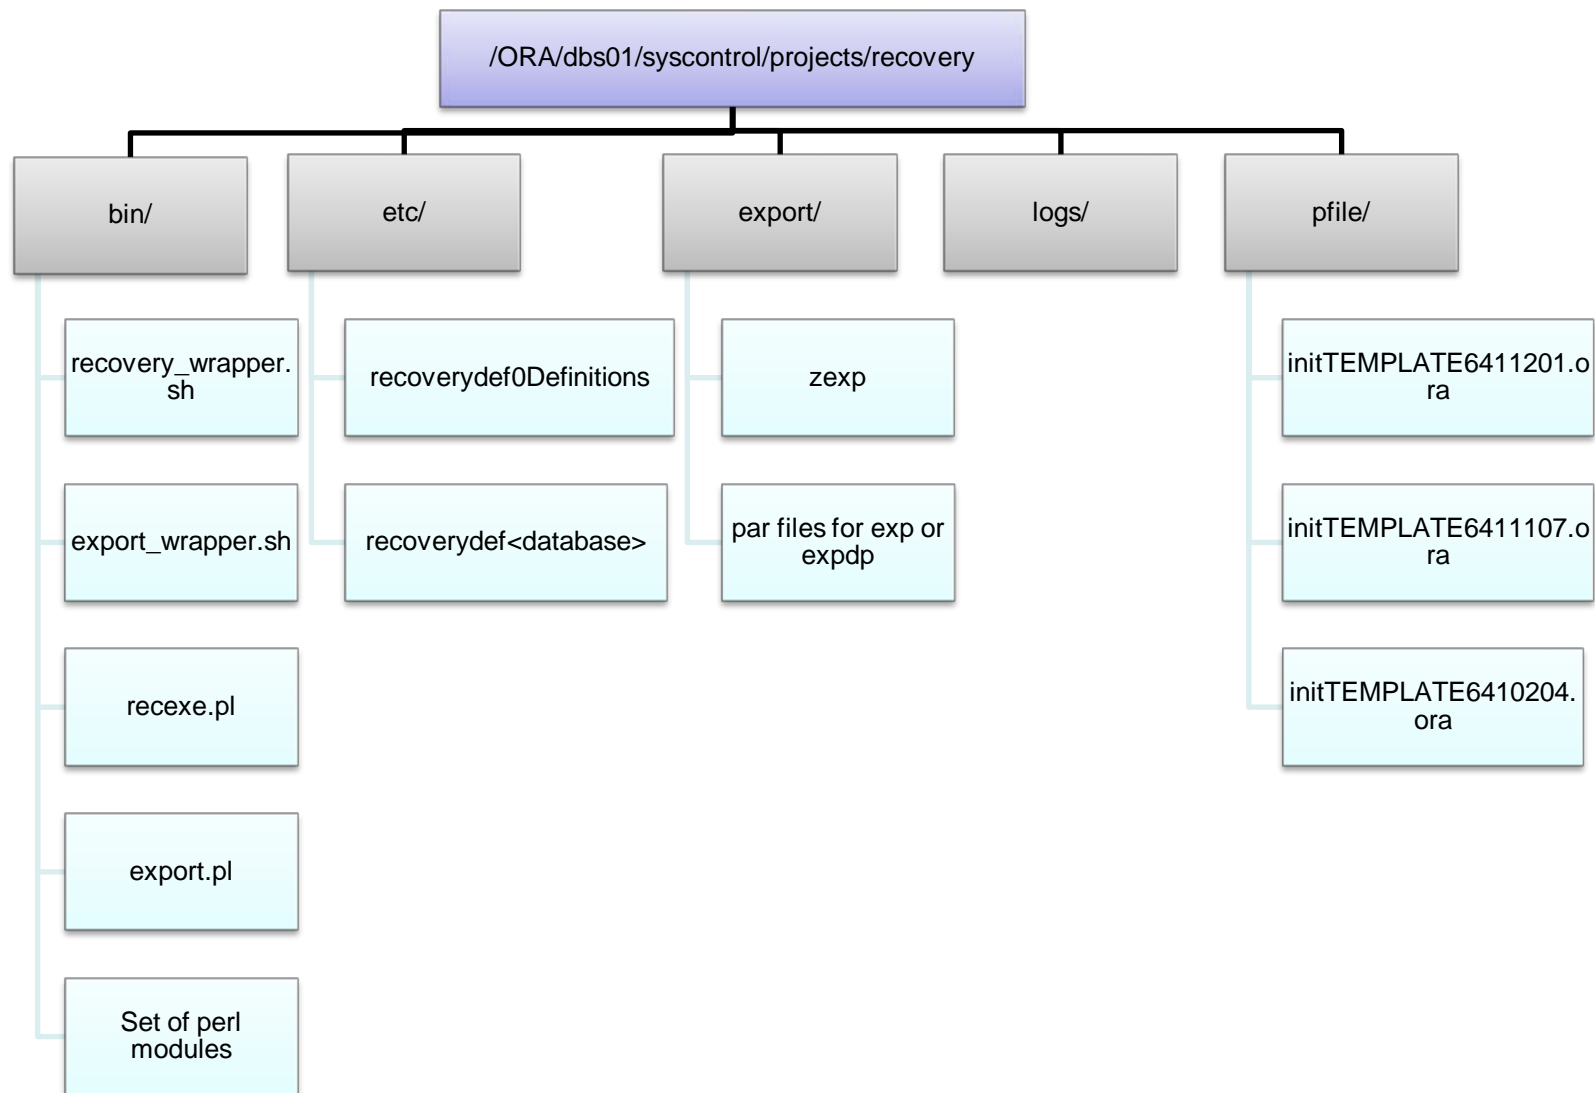

- Recovery platform principles
- Use Cases
- Conclusion

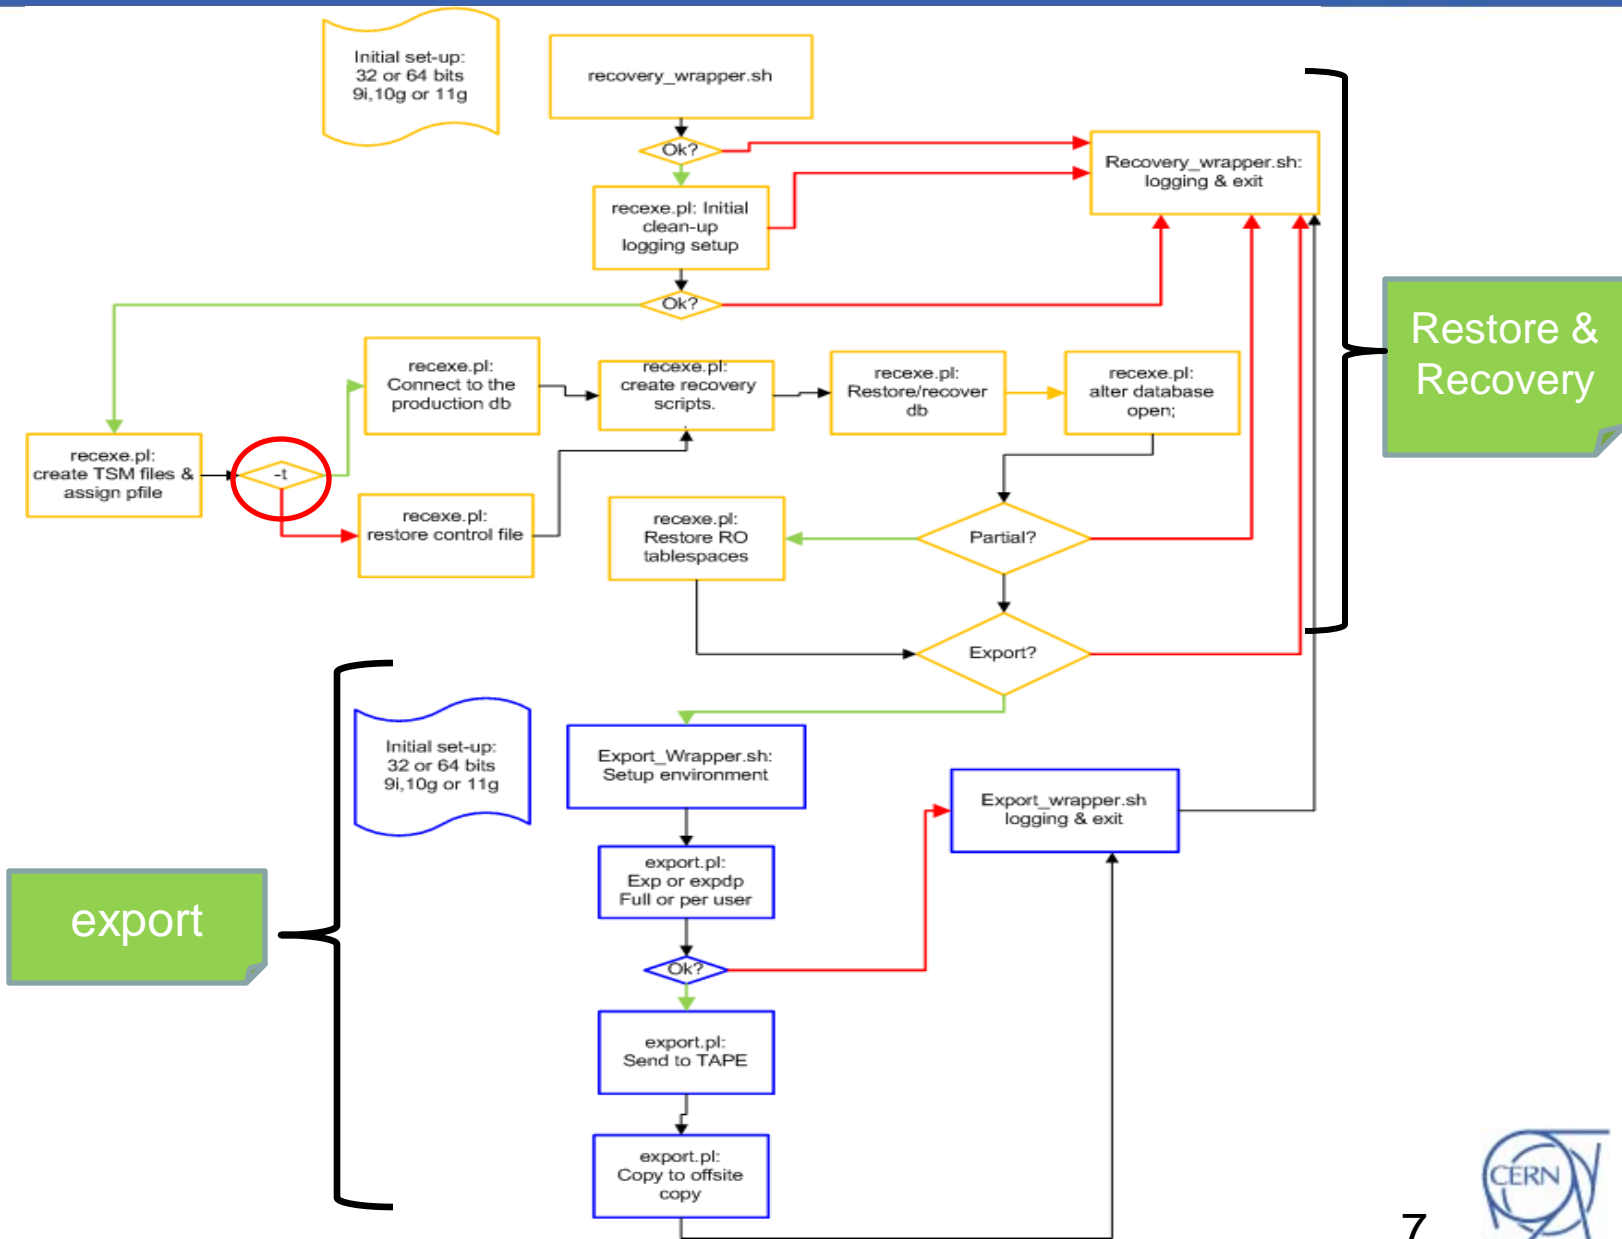

- **Validate** tape backupsets
- **Isolation**
 - no use of catalog: controlfile needs to have all backup information needed
 - capped tnsnames.ora
 - no user jobs must run
- **Automatic cleanup** except otherwise configured or an error arises.
- **Flexible** and easy to customize
- Take advantage of a restored database: **exports** can be configured -> further validation
- Spans several Oracle homes (**9i,10g,11g**) and OS: solaris & linux 32 & 64 bits.
- **Maximize** recovery server: several recoveries at the same time
- **Easy to deploy**: any server can be a recovery server

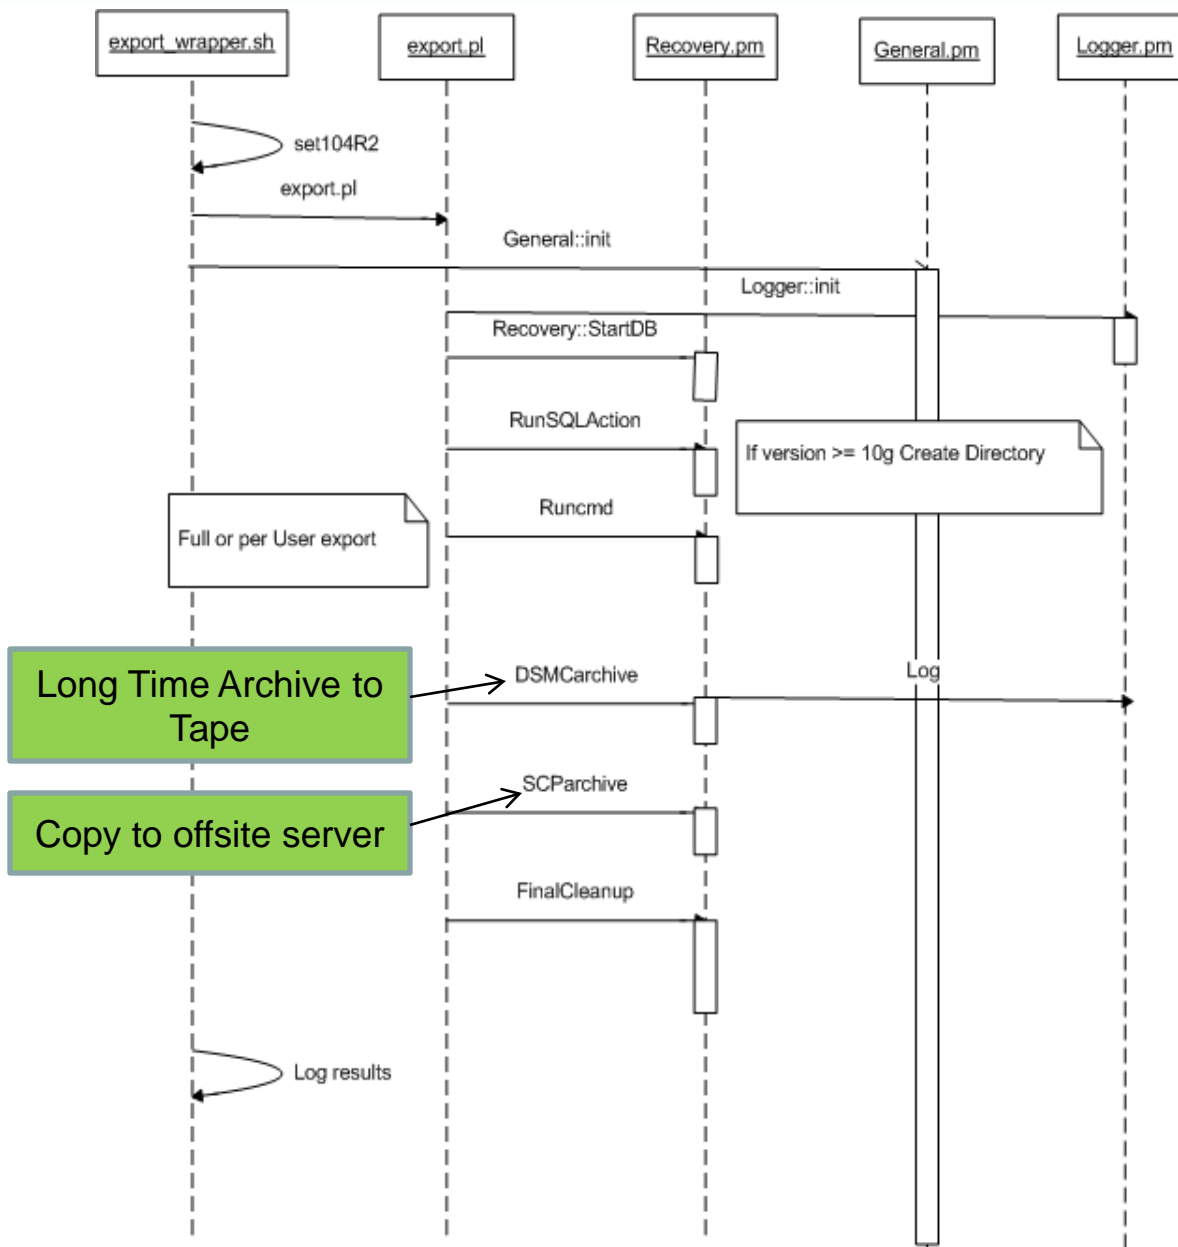

- Server with Linux (>RHE4) or Solaris (>8)
- Oracle database server target release(s) for single instance:
 - 9i: 32 & 64 bits
 - 10g
 - 11gR1 & 11gR2
- Perl (v5.8.5) & bash shell should be available
- TDP-Oracle libraries (v5.5.3)
- Enough storage to carry intended recoveries on **SAN** or **NAS**.

- Runs anywhere: ~2600 lines of Perl & Bash

```
oracle@recoveryserver> mkdir -p /ORA/dbs01/syscontrol/projects
```

```
--Install software
```

```
oracle@recoveryserver> cd /ORA/dbs01/syscontrol/projects
```

```
oracle@recoveryserver> unzip recoveryplatform.zip
```

```
--Mount NFS file system for recovery
```

```
oracle@recoveryserver> sudo mount -o hard,nointr,rsize=32768,wsiz=32768,tcp,actimeo=0,timeo=600 -t nfs NFSserver:/vol/bigstorage /ORA/dbs03/orada
```

```
--Copy/create password file to connect to target TSM server
```

```
oracle@recoveryserver> /opt/tivoli/tsm/client/oracle/bin64/TDPO.oradev10_ora
```

```
--In case not in expected location
```

```
oracle@recoveryserver> ln -s /bin/bash /usr/bin/bash
```

- Recoveries are carried out every week, for important db (cron job):

```
oracle@recoveryserver> crontab -l | grep devdb
0 6 * * 6 /ORA/dbs01/syscontrol/projects/recovery/bin/recovery_wrapper.sh -e devdb10
-f /ORA/dbs01/syscontrol/projects/recovery/etc/recoverydefD10 -s D10
```

- If recovery_wrapper.sh or similar not available:

```
--Launch your recovery
```

```
oracle@recoveryserver> cd /ORA/dbs01/syscontrol/projects/recovery/bin
```

```
oracle@recoveryserver> . ./set104gR2
```

```
oracle@recoveryserver> export ORACLE_SID=D10
```

```
oracle@recoveryserver> perl -w recexe.pl -config ../etc/recoverydefD10 -logfile test
```

```
--Launch your export
```

```
oracle@recoveryserver> perl -w export.pl -config ../etc/recoverydefD10 -logfile test_export
```

- All actions are logged by Logger.pm

```
-- Recovery & Export logs
```

```
[oracle@dbsrvd101 logs]$ ls -l /ORA/dbs01/syscontrol/projects/recovery/logs | grep devdb  
-rw-r--r--  1 oracle ci      280 Feb 13 15:42 devdb10_20100209-060001  
-rw-r--r--  1 oracle ci   10197 Feb 13 15:42 export_devdb10_20100209-102523
```

```
-- Export results
```

```
[oracle@dbsrvc112 export]$ ls -l /ORA/dbs03/oradata/DEVDB10/export  
total 61465132  
-rw-r-----  1 oracle ci 10276483026 Feb  8 21:10 exp_full_DEVDB10_20100208-185751.dmp.gz  
-rw-r--r--  1 oracle ci    3437034 Feb  8 21:10 exp_full_DEVDB10_20100208-185751.log
```

- Last successful recovery scripts are kept:
\$dirtobackup='/ORA/dbs03/oradata/BACKUP';
- E-mail notifications

```
# DBNAME
$dbtorec='DEVDB10';

##### Usually fix params
# Location for all datafiles, xdump, export directory.
# This will be deleted at next run
$filelocation="/ORA/dbs03/oradata/$dbtorec";

# 0 it's a full recovery, 1 it's a partial one. 0 it's default
$partial=1;

# It's either a number, the percentage of readonly tablespace to restore/recover, if > 60 all of them are treated or a list of tablespaces
# separated by a :
$readonlytbl=10;

# Partial TSPITR
$tblpitr='SYSTEM:SYSAUX:UNDO01:TOOLS:TEAMMATE:XMLDB';

# Clean-up at the end of recovery to free space.
# If export=1, it cleans up only at the end of export
$finalcleanup=1;

# set time for restore and recovery, in this case 3 hours later than the actual time, string format is also possible: '01/26/2010 17:44:11'
$timeinterval='3';

# To do ASM operations
$asminstance='+ASM1';
$asmoraclehome='/ORA/dbs01/oracle/product/10.2.0/rdbms';
# 1 export is needed 0 no action will be run.
$export=1;

# full or users
$exporttype='user';

# delimited by ',' users or 'all' for export of all users
$users='USERA,USERB,USERC';

# for 10 'expdp'
# for 9 '/ORA/dbs01/admindb/recovery/export/zexp'
$zexp='expdp';
# specific parameter files
$parfile10='/ORA/dbs01/syscontrol/projects/recovery/export/full10.par';
$parfile10peruser='/ORA/dbs01/syscontrol/projects/recovery/export/full10peruser.par';

# Do we archive on tape? set 0 to not to archive
$dsmcarchive=1;

# Archive schema used by TSM server by default ARCH365
$sarchiveschema='ARCH3650';

# SCP repository? set 0 to not to copy to offsite
$scprepository=1;
```

} ASM configuration

- Recover a table as it was on 16th Dec 2009 at 05:00am
- Do we have an export that could fit?

Archived Files

This page allows to retrieve what has been sent to tape from the recovery system since 21 December 2007. It may well happen that you are looking for some export sent before this date. In this case for a solaris db try `dsy-srv4` for a linux db try `dbsrvd101`

Recovery Catalog:

Start date: End date:

[Date format: YYYYMMDD] i.e. 1 January 2008: 20080101 starting always at midnight.

wcernp	Fri 29-JAN-2010 18:27:02	245492	dbsrvd101	tsm52	rmancat_prod10g@aisrnm_prod	662460014	ARCH3650	/ORA/dbs03/oradata/WCERNP/export/exp_full_WCERNP_20100129-170622.log

- Set PITR:

```
oracle@recoveryserver> vi /ORA/dbs01/syscontrol/projects/recovery/etc/recoverydefWCERNP
# set time for restore and recovery
$timeinterval='12/16/2009 05:00:00'
```

- Launch it:

```
/ORA/dbs01/syscontrol/projects/recovery/bin/recovery_wrapper.sh -e wcernp -f /ORA/dbs01/syscontrol/projects/recovery/etc/recoverydefWCERNP -s WCERNP1
```

- It will dispatch following scripts in order:

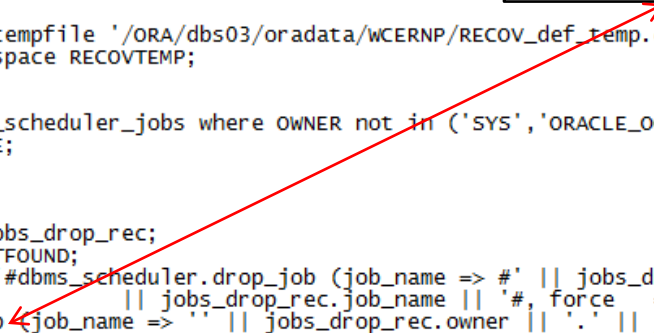

```
[oracle@recoveryserver WCERNP]$ cat contrl_restore.rcv
connect target /
set dbid=662460014;
startup nomount pfile=/ORA/dbs03/oradata/WCERNP/initWCERNP.ora;
run {
set controlfile autobackup format for device type 'sbt' to 'WCERNP_%F';
ALLOCATE CHANNEL c1 DEVICE TYPE sbt PARS 'ENV=(TDPO_OPTFILE=/opt/tivoli/tsm/client/oracle/bin64/tdpo_wcernp.opt)';
restore controlfile from autobackup until time 'to_date('12/17/2009 00:00:00','mm/dd/yyyy hh24:mi:ss)';
shutdown immediate;
}
exit;
```

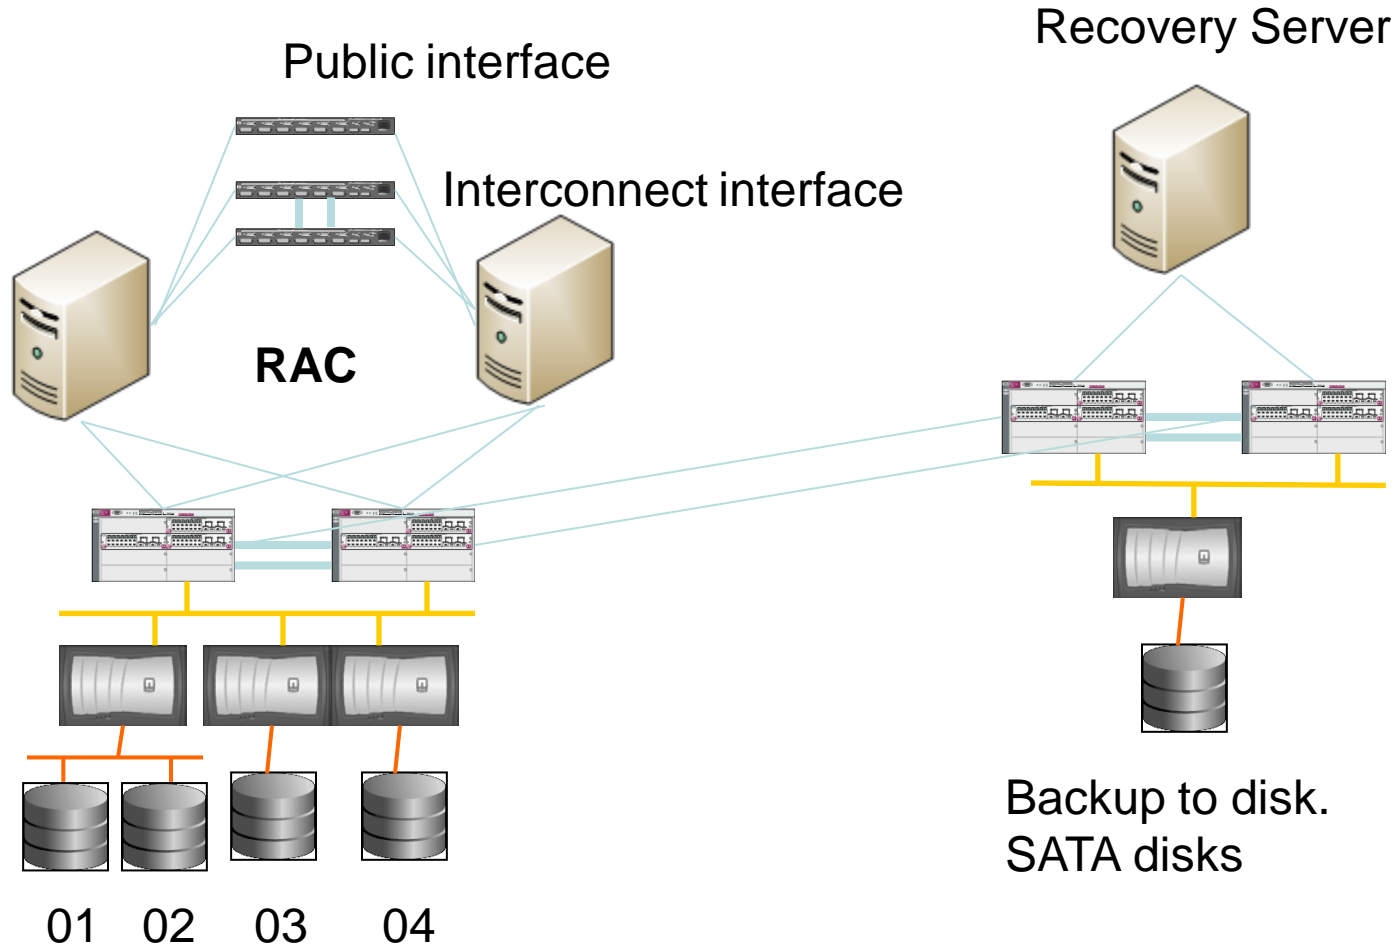

```
[oracle@recoveryserver WCERNP]$ cat db_restore.rcv
connect target /
startup mount pfile=/ORA/dbs03/oradata/WCERNP/initWCERNP.ora;
SET_PARALLEL_MEDIARESTORE OFF;
run {
ALLOCATE CHANNEL c1 DEVICE TYPE sbt PARS 'ENV=(TDPO_OPTFILE=/opt/tivoli/tsm/client/oracle/bin64/tdpo_wcernp.opt)';
set until time "to_date('12/16/2009 05:00:00','mm/dd/yyyy hh24:mi:ss)";
restore database check readonly;
switch datafile all;
recover database parallel, delete archivelog;
}
exit;
```

Metalink ID 433335.1

```
[oracle@recoveryserver WCERNP]$ cat db_start.sql
WHENEVER SQLERROR EXIT SQL.SQLCODE
set serveroutput on;
alter database open resetlogs;
create temporary tablespace RECOVTEMP tempfile '/ORA/dbs03/oradata/WCERNP/RECOV_def_temp.dbf' size 1000m;
alter database default temporary tablespace RECOVTEMP;
DECLARE
CURSOR jobs_drop IS
select owner,job_name from dba_scheduler_jobs where OWNER not in ('SYS','ORACLE_OCM') and enabled='TRUE';
jobs_drop_rec jobs_drop%ROWTYPE;
BEGIN
OPEN jobs_drop;
LOOP
FETCH jobs_drop INTO jobs_drop_rec;
EXIT WHEN jobs_drop%NOTFOUND;
dbms_output.put_line(q'#dbms_scheduler.drop_job (job_name => #' || jobs_drop_rec.owner || '##'
|| jobs_drop_rec.job_name || '#, force => TRUE)#');
dbms_scheduler.drop_job (job_name => '' || jobs_drop_rec.owner || '.' || jobs_drop_rec.job_name || ', force => TRUE);
END LOOP;
CLOSE jobs_drop;
EXCEPTION
when OTHERS
THEN
dbms_output.put_line(dbms_utility.format_error_backtrace);
dbms_output.put_line(dbms_utility.format_error_stack);
END;
/
shutdown immediate;
exit;
```

job_queue_processes is already 0

- Set-up

```
--Set point in time of your recovery, just a bit before the problem arises:
[oracle@recoveryserver etc]$ vi /ORA/dbs01/syscontrol/projects/recovery/etc/recoverydefAUDIT
# set time for restore and recovery, in this case 3 hours later than the actual time, string format is also possible: '01/26/2010 17:44:11'
$timeinterval='3';
```

Just create recovery scripts

```
--Generate scripts
[oracle@recoveryserver bin]$ . /ORA/dbs01/syscontrol/projects/recovery/bin/set11gR2
[oracle@recoveryserver bin]$ export ORACLE_SID=AUDITP
/ORA/dbs01/syscontrol/projects/recovery/bin/recovery_wrapper.sh -e db11g -f /ORA/dbs01/syscontrol/projects/recovery/etc/recoverydefAUDIT -s AUDITP -t
```

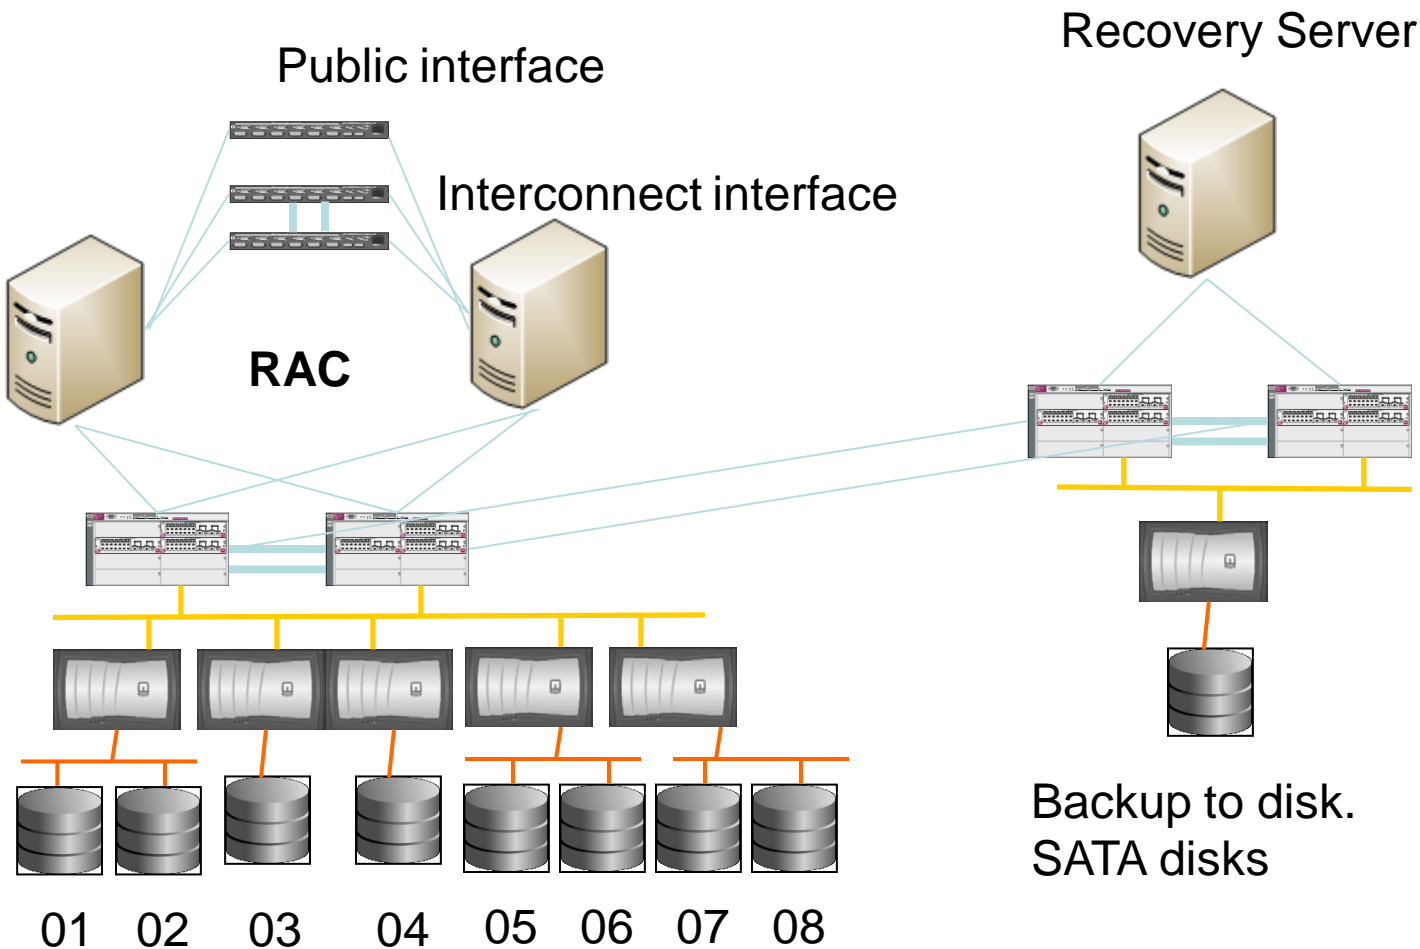

- Run restore/recover:

```
--Run
rman @contrl_restore.rcv
rman @db_restore.rcv
```

- Copy archived redo logs from production to recovery server if needed.
- Catalog recovered db on production and check it out!

```
--Catalog recovered database on production db:
catalog datafilecopy '/net/NFSSserver/vol/apps_recovery/AUDITP/datafile/o1_mf_auditsto_5j8ybrb4_.dbf' level=0;
catalog datafilecopy '/net/NFSSserver/vol/apps_recovery/AUDITP/datafile/o1_mf_sysaux_5j8ybrbn_.dbf' level=0;
catalog datafilecopy '/net/NFSSserver/vol/apps_recovery/AUDITP/datafile/o1_mf_system_5j906td0_.dbf' level=0;
catalog datafilecopy '/net/NFSSserver/vol/apps_recovery/AUDITP/datafile/o1_mf_undotbs1_5j906tcq_.dbf' level=0;
catalog datafilecopy '/net/NFSSserver/vol/apps_recovery/AUDITP/datafile/o1_mf_users_5j8ybrbz_.dbf' level=0;
...
```

```
--Check
RMAN> run {
2> set until time "to_date('11/13/2009 22:36:15','mm/dd/yyyy hh24:mi:ss)";
3> restore database preview;
4> }
```

- New scripts and templates introduced for VLDB backup
 - backup incremental level 0 ... check logical database `skip readonly` format...;
 - RO tablespaces are backed up every night
- Retention policy changed time window to redundancy
- Validation possibilities:
 - Full restore: time/resource cost
 - Partial restore:

```
# 0 it's a full recovery, 1 it's a partial one. 0 it's default  
$partial=1;
```

```
# It's either a number, the percentage of readonly tablespace to restore/recover, if > 60 all of them are treated or a list of tablespaces  
# seperated by a :  
$readonlytbl=10;
```

- Restore/recover the READ WRITE part of the database

```
recoveryserver$ cat db_restore.rcv
connect target /
SET PARALLELMEDIASTORE OFF;
run {
ALLOCATE CHANNEL c1 DEVICE TYPE sbt PARS 'BLKSIZE=1048576,ENV=(TDPO_OPTFILE=/opt/tivoli/tsm/client/oracle/bin64/tdpo_dbsrva206.opt)';
set until time "to date('03/04/2010 07:31:14','mm/dd/yyyy hh24:mi:ss)";
restore database;
switch datafile all;
sql 'alter database disable block change tracking';
recover database parallel, delete archivelog;
}
exit;
```

- Before open db offline RO tablespace datafiles

```
recoveryserver$ cat db_start.sql
...
alter database datafile '/ORA/dbs05/ACCLLOG/datafile/o1_mf_log_data_3xzrvvt9_.dbf' offline;
...
alter database open resetlogs;
....
```

- Once db open, restore selected RO tablespaces

```
connect target /
SET PARALLELMEDIASTORE OFF;
run {
ALLOCATE CHANNEL c1 DEVICE TYPE sbt PARS 'BLKSIZE=1048576,ENV=(TDPO_OPTFILE=/opt/tivoli/tsm/client/oracle/bin64/tdpo_dbsrva206.opt)';
sql 'alter tablespace LOG_TEST_DATA_20080313 OFFLINE';
...
restore tablespace LOG_TEST_DATA_20080313,LOG_DATA_20090324,...;
...
sql 'alter tablespace LOG_TEST_DATA_20080313 ONLINE';
...
}
shutdown immediate;
exit;
```

- If schema is self-contained
- Kind of tablespace PITR but much simpler
- \$tblpitr

```
#Set of tablespaces to restore/recover, split by :, in case of a partial database restore (Read write tablespaces PITR)
# Need to add following tablespaces compulsory:
#select distinct tablespace_name from dba_segments where owner in ('SYS','SYSTEM');
# Due to Oracle 9i: Full Export Fails with ORA-1403 (No Data Found) on Exporting Cluster Definitions [ID 255724.1]
# Add XDB tablespace if present: select default_tablespace from dba_users where username like '%XDB%';
# Add tablespace you want to restore/recover if selfcontained i.e. TEAMMATE
# Use of both $tblpitr and $partial not allowed in this release
$tblpitr='SYSTEM:SYSAUX:UNDO01:UNDO02:TOOLS:TEAMMATE:XMLDB';
```

- expdp didn't work in some cases:

```
ksedmp: internal or fatal error
ORA-07445: exception encountered: core dump [ksxpcini()+504] [SIGSEGV] [Address not mapped to object] [0x0000010Fc] [] []
Current SQL statement for this session:
BEGIN sys.kupc$que_int.create_queues(:1, :2, :3, :4); END;
```

```
ORA-7445 [ksxpcini] By Datapump From Activated Standby. OCI-22303: type "SYS"."KU$_STATUS1020" not found [ID 388041.1]
alter system set aq_tm_processes=1;
```

- db_restore.rcv

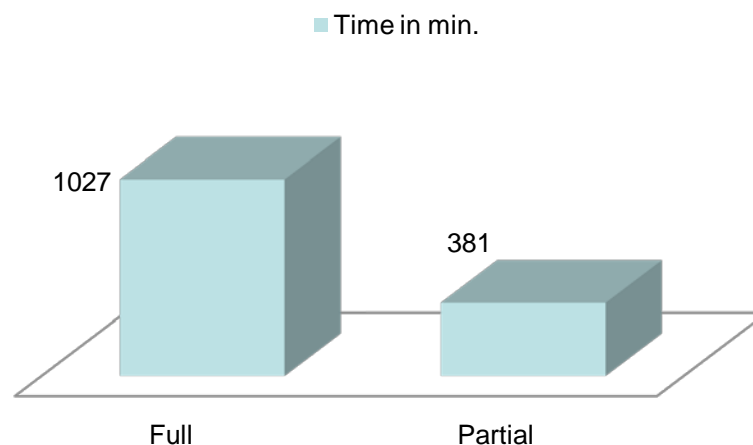

```
SET PARALLELRESTORE OFF;
run {
ALLOCATE CHANNEL c1 DEVICE TYPE sbt PARS 'BLKSIZE=1048576,ENV=(TDPO_OPTFILE=/opt/tivoli/tsm/client/oracle/bin64/tdpo_oradev10.opt)';
set until time "to_date('03/07/2010 08:29:55','mm/dd/yyyy hh24:mi:ss)";
restore database skip forever tablespace
'ACCELERATORS',
'ARSYS',
...
switch datafile all;
sql 'alter database disable block change tracking';
recover database skip forever tablespace
'ACCELERATORS',
'ARSYS',
...
'TSMMS_INDX', parallel delete archivelog;
}
exit;
```

- db_start.sql

```
WHENEVER SQLERROR EXIT SQL.SQLCODE
set serveroutput on;
alter database datafile '/ORA/dbs03/DEVDB10/datafile/o1_mf_ctx_5b1wc8ng_.dbf' offline;
alter database datafile '/ORA/dbs03/DEVDB10/datafile/o1_mf_accelera_5b1x0s1n_.dbf' offline;
...
alter database open resetlogs;
...
```

- Database in size:
 - Full: ~420Gb
 - Partial (recovering one schema): ~ 71Gb

Full vs Partial recovery

Partial recovery was **63%** faster than Full recovery

- More than 3000 recoveries performed so far
- Recovery platform shows useful to:
 - Can help to estimate real restore/recover time (SLA)
 - Validates **regularly** your tape backups
 - Helps to test your **backup strategy**
 - Helps to test your **recovery strategy**
- Helps in a number of use cases
 - i.e. recover from logical user errors
- Maximize your recovery infrastructure -> take consistent **exports**
- Total **isolation** from production
- **Easy installation**
- **Open source** project **SOURCE-FORGE** <http://sourceforge.net/projects/recoveryplat/>
 - It can be adapted to different tape vendor: netbackup, EMC network backup
 - Add new functionality

Thank You !
