Request: 10 shifts to complete beam time

• • • Beta-decay observables

$$dW \sim dW_0 \left(1 + a \frac{\mathbf{p} \cdot \mathbf{q}}{E_e E_\nu} + b \frac{\gamma m_e}{E_e} \right)$$

phase-space
factor

*beta-neutrino
angular correlation
coefficient*

Fierz
interference
term

Pure Fermi transitions

SM: Vector current

- Preferred emission angle: $\theta = 0^\circ$
 - Maximum recoil energy

Correlation Parameters

$$a_F = 1$$

$$b_F = 0$$

• • • **Beta-decay observables**

$$dW \sim dW_0 \left(1 + a \frac{\mathbf{p} \cdot \mathbf{q}}{E_e E_\nu} + b \frac{\gamma m_e}{E_e} \right)$$

Sensitivity to NP

$$\tilde{a} = \frac{a}{1 + \alpha b}$$

phase-space factor

beta-neutrino angular correlation coefficient

Fierz interference term

Pure Fermi transitions

SM: Vector current

- Preferred emission angle: $\theta = 0^\circ$
 - Maximum recoil energy

NP: Scalar current

- Preferred emission angle: $\theta = 180^\circ$
 - Minimum recoil energy

Correlation Parameters

$$a_F \cong 1 - \frac{|C_S|^2 + |C'_S|^2}{|C_V|^2}$$

$$b_F \cong \pm \text{Re} \left(\frac{C_S + C'_S}{C_V} \right)$$

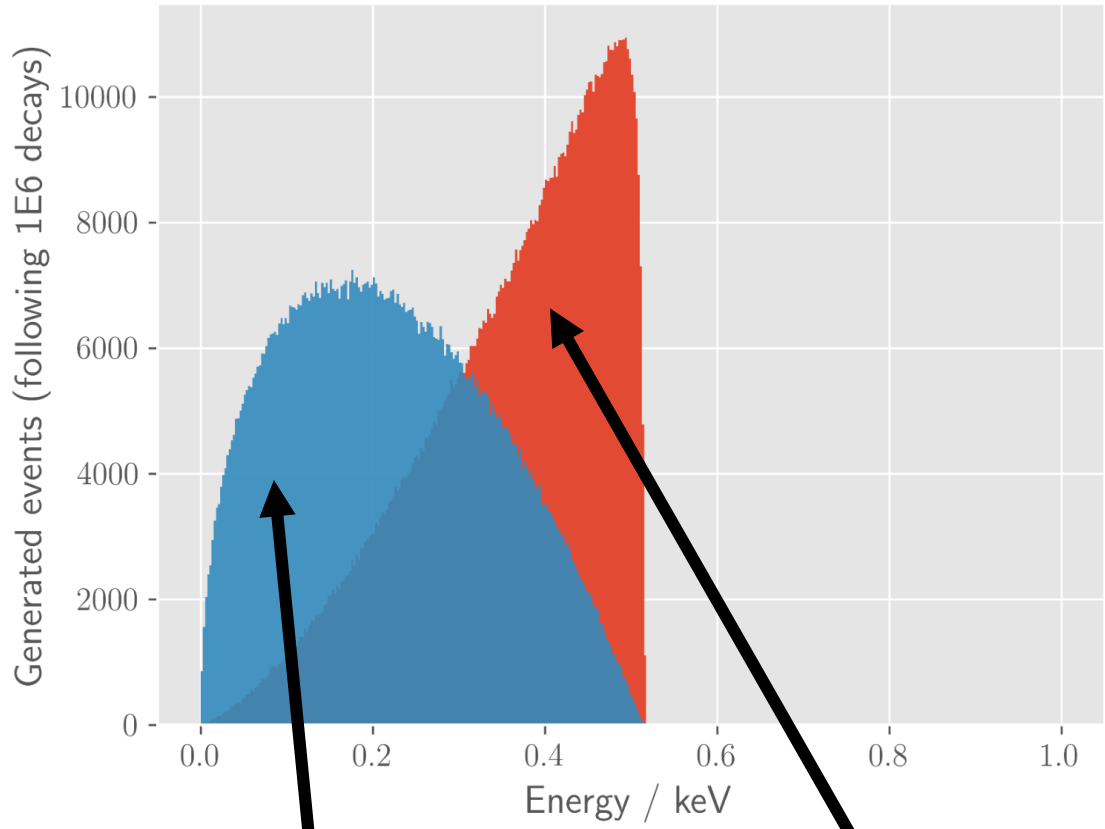

● ● ● Recoil determination for $^{32}\text{Ar} \rightarrow ^{32}\text{Cl}$

➤ ^{32}Ar decays by β -decay to ^{32}Cl

➤ Recoil energy ~ hundreds eV

Recoil Spectrum

● ● ● Kinematic broadening: $^{32}\text{Ar} \rightarrow ^{32}\text{S} \rightarrow ^{31}\text{S} + p$

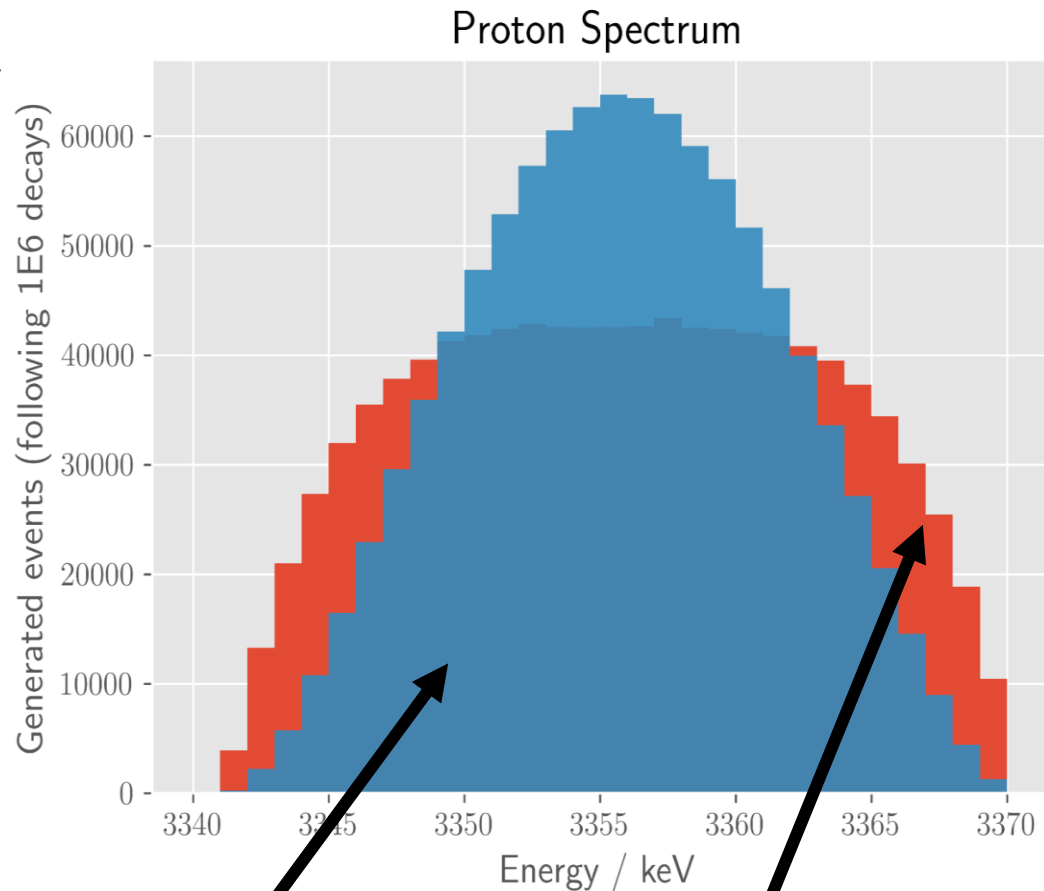

➤ ^{32}Ar decays by β -decay to ^{32}Cl which subsequently decays by proton emission to ^{31}S

➤ Recoil energy ~ **hundreds eV**

➤ Protons energies ~ **several MeV**

➤ The energy of the emitted protons is subject to kinematic shift due to the recoiling daughter nucleus

Proof of Principle:
detection setup
in 4T magnet

Beta detector
+
SiPM

proton
detectors
planes

Catcher

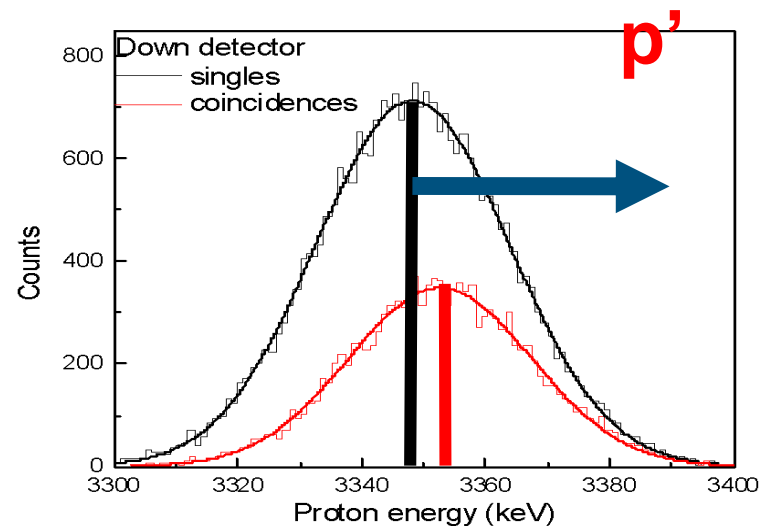

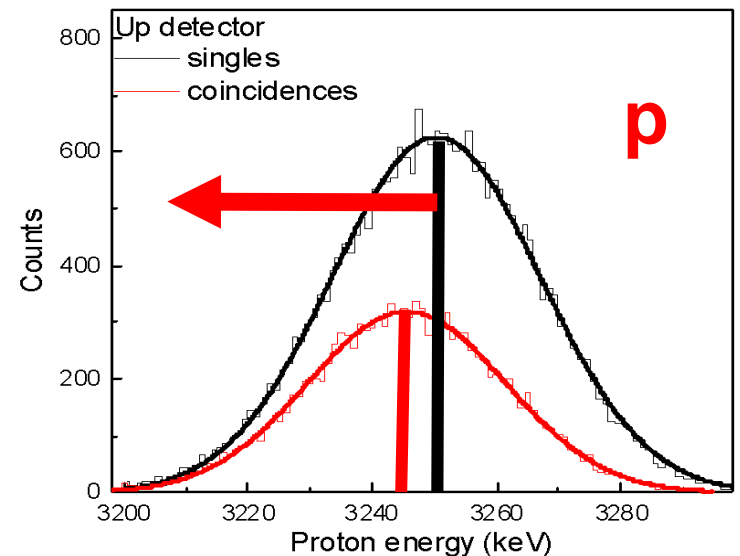

^{32}Ar

Upper detectors

Lower detectors

● ● ● WISArD 2018: $^{32}\text{Ar} \rightarrow ^{32}\text{S} \rightarrow ^{31}\text{S} + \text{p}$

Weighted average energy shifts

$$\Delta E = |\bar{E}_{coinc} - \bar{E}_{single}|$$

$$\Delta E_F = 4.49(3) \text{ keV}$$

$$\Delta E_{GT} = 3.05(9) \text{ keV}$$

Monte Carlo simulations

MeanDeltaE (E_down-E_up)

Extracted modified correlation β - u

$$\tilde{a}_F = 1.007(32)_{stat}(25)_{syst}$$

$$\tilde{a}_{GT} = -0.222(86)_{stat}(16)_{syst}$$

Test: October 2021, 10 shifts

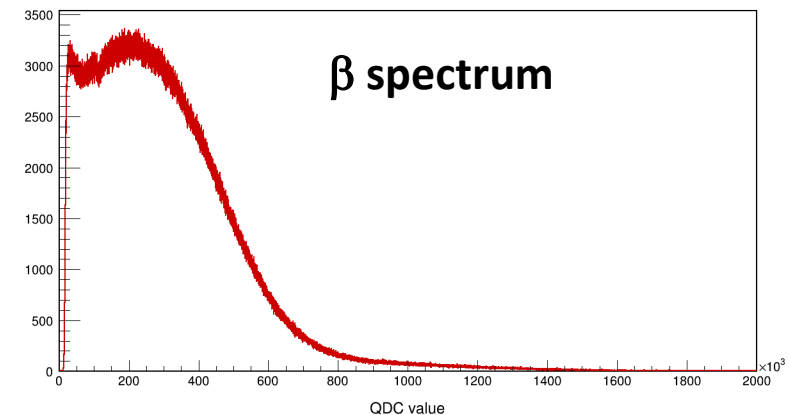

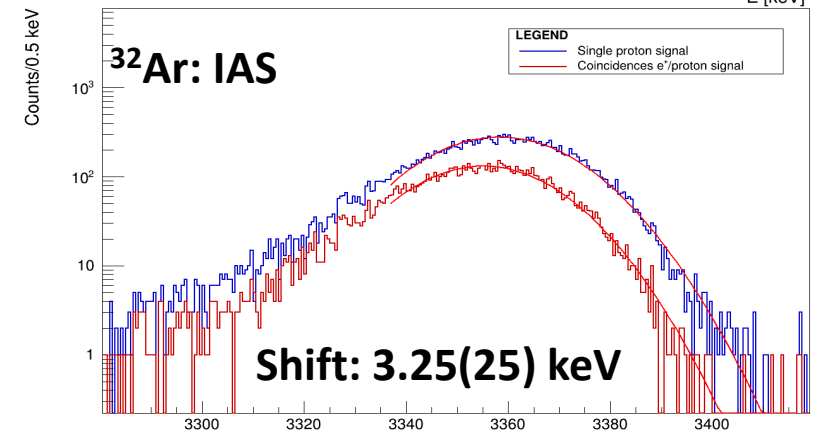

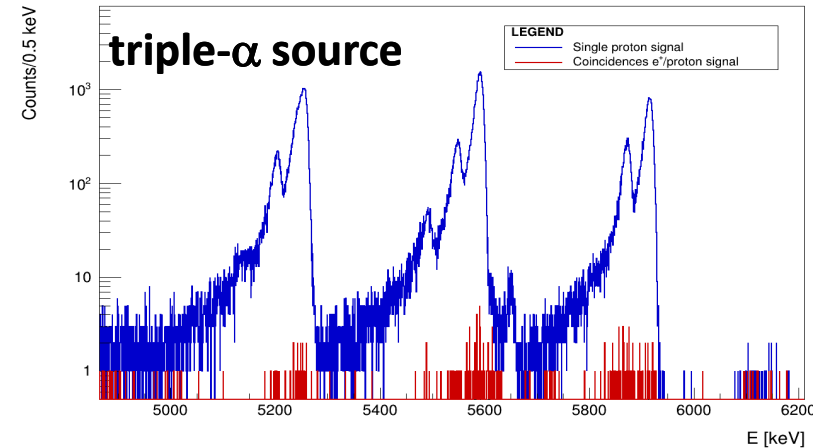

New detection setup:

new silicon preamps

**new beta detector
+
9 SiPM + preamps**

new silicon strip proton detectors

new MCP beam position detector

All equipment worked more or less... still upgrades

● ● ● Weak-interaction exclusion plots

10/2018: Proof-of-principle for WISArD

11/2020: INTC accepts proposal with 24 shifts

10/2021: WISArD test with 10 shifts

02/2022: Request of 10 shifts to complete beam time
