

TRD DQM

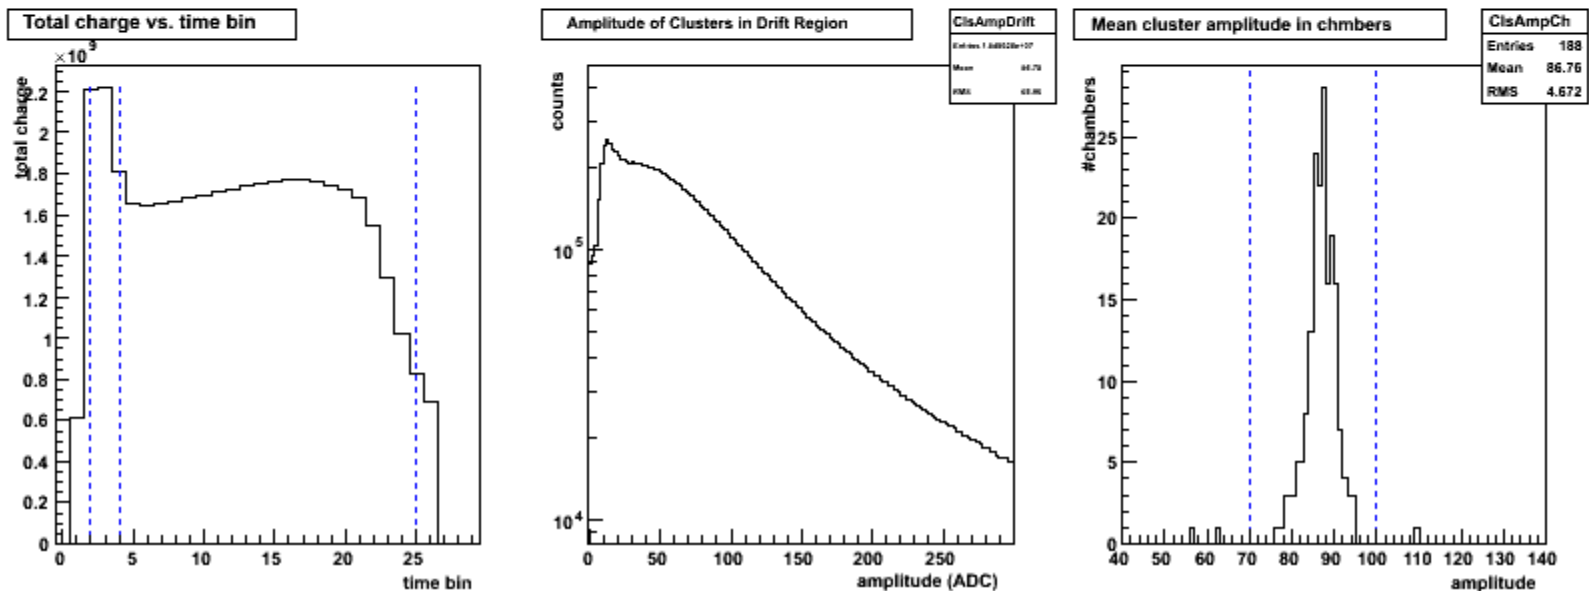

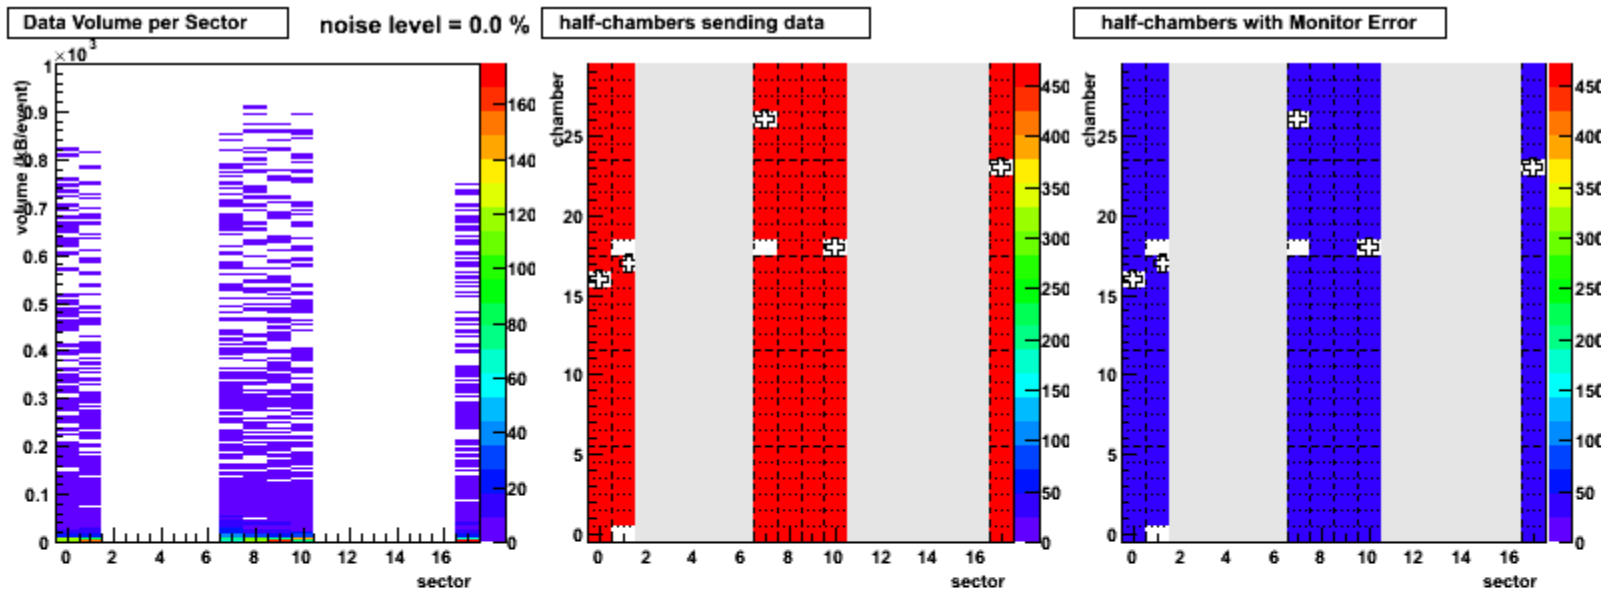

Christoph Blume

Offline Week, November, 2010

Recent Updates

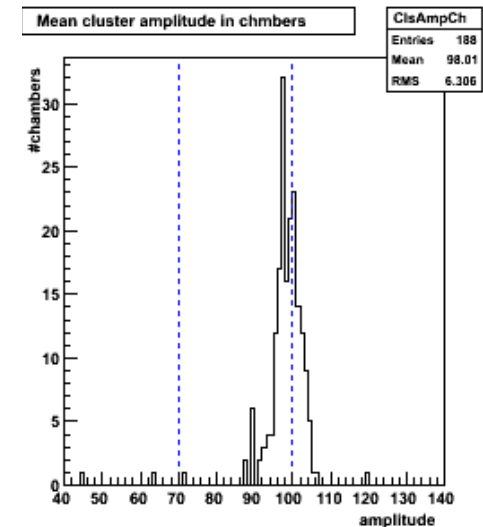

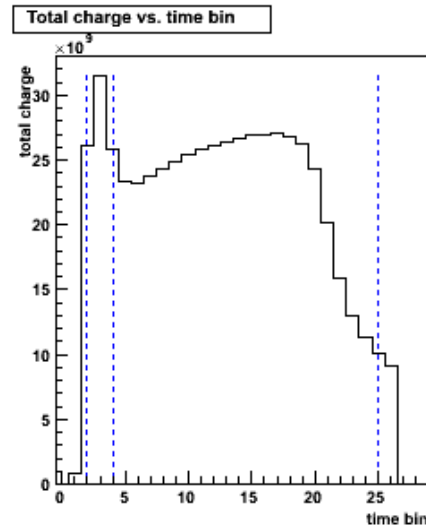

- Finally using generic GUI
- Adapt scales of histograms (data volume per sector) for HI
- Fixed differences between logbook and online
- Frequent update of Twiki page for DQM shifter
- Good and frequent feed back from DQM shifters

DQM Plots (Pb+Pb)

Thresholds, etc.

- Threshold lines
 - Depend on Vdrift
 - Very fast Vdrift at beginning of HI period
 - Back to normal after a few days
→ no changes needed

- Need to implement a threshold for Monitor Errors plot
 - Normally supposed to be empty
 - Depending on trigger scheme we now expect errors on different levels

Markers

- Non operational chambers
 - 4 permanently switched off
 - Right now: 3 additional chambers off, due to LV problem
- Should be marked for shifter
 - Right now rel. long response time
 - Hard wired in agent
 - Need something faster here
