The CMS tracker performance in Run3

Monday 17 July 2023 17:38 (1 minute)

The innermost tracking system of the CMS experiment consists of two tracking devices, the Silicon Pixel and Silicon Strip detectors. The tracker was specifically designed to very accurately determine the trajectory of charged particles or tracks.

In this talk, the preliminary performance of the tracker detectors during the Run 3 operation will be summarized, with particular emphasis on the expected changes in detector performance with increasing irradiation.

Primary author: WULANSATITI, Muti (Florida State University (US))

Presenter: WULANSATITI, Muti (Florida State University (US))

Session Classification: Reception and poster presentation

Track Classification: Detectors and facilities
