

# Proposal Mk. II

- Modify PD2P trigger based on dataset age
  - See below for one possible way to do this
- Do not allow a T2 to get datasets which are larger than 5% of its DATADISK
- Use length of subscription queue as negative weight for T2s
  - Subscriptions, files, TB ... ? TBD
- Reduce rebrokering time to 12 hours
- Need job waiting time clearly monitored as key metric for performance

Dataset Age	Threshold
< 1 week	1
1 week - 1 month	2
1 month - 3 months	3
3 months - 9 months	5
> 9 months	10
