

## Update from the HEPiX IPv6 working group

*Tuesday 26 April 2022 16:00 (25 minutes)*

During the last 6 months the HEPiX IPv6 working group has continued to encourage the deployment of dual-stack IPv4/IPv6 services. We also recommend dual-stack clients (worker nodes etc). Many data transfers are happening today over IPv6 but it is still true that many are not! This talk will present our recent activities including our investigations for the reasons behind ongoing use of IPv4 as well as planning for the move to an IPv6-only core WLCG.

### Desired slot length

20 minutes

### Speaker release

Yes
