# Search For Dark Matter at the CMS Experiment

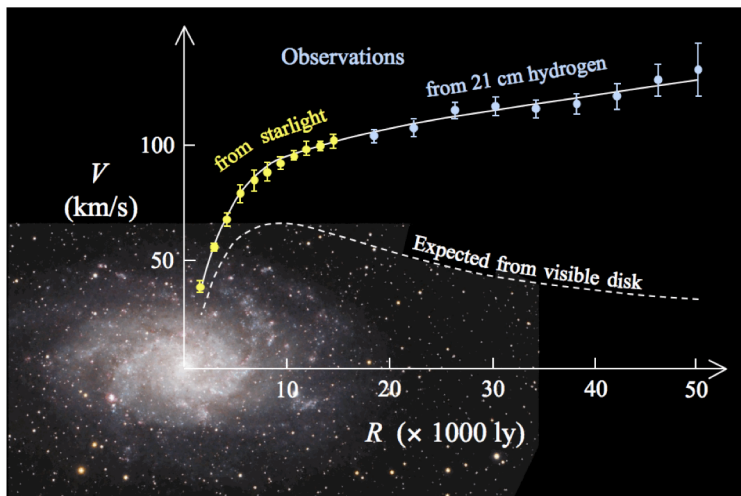

PEDRO MERCADANTE - UFABC

SPRACE

“We propose to build a general purpose detector designed to run at the highest luminosity at the LHC. The CMS (Compact Muon Solenoid) detector has been optimized for the search of the SM Higgs boson over a mass range from 90 GeV to 1 TeV, but it also allows detection of a wide range of possible signatures from alternative electro-weak symmetry breaking mechanisms.”

Abstract of the CMS Letter of Intent, submitted to the LHC Experiments Committee (LHCC) on 1 October 1992

# Dark Matter

**Galaxy Rotation Curves**

**Strong Gravitational Lensing**

**Cosmic Microwave Background**

**Bullet Cluster**

# Strategies to Search for Dark Matter

## Direct detection

- ❑ DM-nucleus scattering

## Indirect detection

- ❑ DM Annihilation products

## Collider production

- ❑ Production of DM at the lab (e.g. LHC)
  - Clear strategy for WIMP
  - Sensitive to a large DM mass range

# Modeling Dark Matter Production at the LHC

## Model-independent search

- Contact Interaction
  - Limited at LHC energies
- Simplified Models
  - DM: pair-produced Dirac fermion
  - Mediator: (vector or scalar), NWA
  - Minimal flavor violation
  - Parameters:
    - Coupling structure,  $M_{\text{med}}$ ,  $M_{\text{DM}}$ ,  $g_{\text{SM}}$ ,  $g_{\text{DM}}$

## Benchmark model search

- SUSY
- Inert Two-Higgs Doublets Model

# Monojet Channel

Search in monojet channel

- Most direct channel.
- Collaboration with Texas Tech

Run II Data

- Monojet Analysis
  - Journal of High Energy Physics 07, 014 (2017)
  - Phys. Rev. D 97, 092005 (2018)

# Alternative Signals

- Models with long-lived mediators
  - Disappearing Tracks signal
  - Reconstruction of a short track
- Models
  - SUSY with AMSB
  - Feebly Interacting Massive Particles (FIMPs)
- Collaboration with Ohio State University
  - SPRACE Team:
    - Phd Student: Breno Ozari
    - Master Student: Felipe Aguiar and João Boger
    - Professors: PM, Thiago Tomei, Andre Lessa (Theory)

CMS Experiment at LHC, CERN  
Data recorded: Wed Dec 31 19:00:00 1969 EST  
Run/Event: 1 / 39  
Lumi section: 20

# Disappearing Tracks Signal

## Signal Selection

- Missing  $E_T$
- Hard Jet
  - Need to model well the hard jet emission

## Short track

- Need to reconstruct the short track
- Need to estimate the background (mainly instrumental)

# Ongoing work

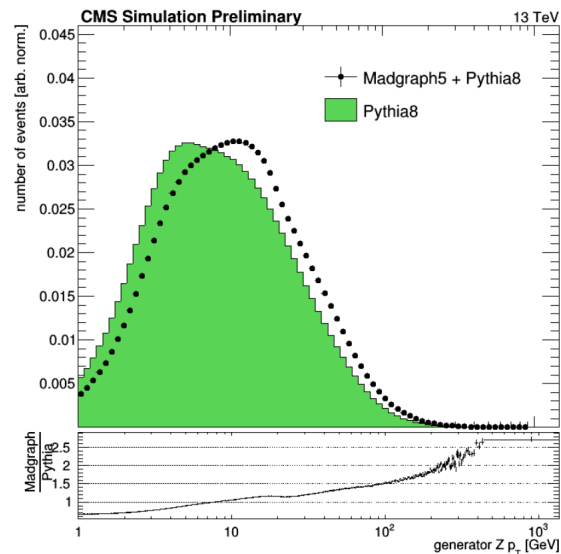

## Signal Simulation

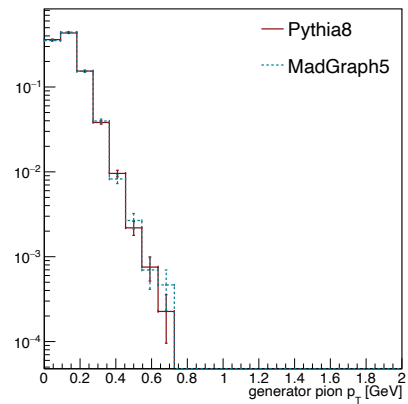

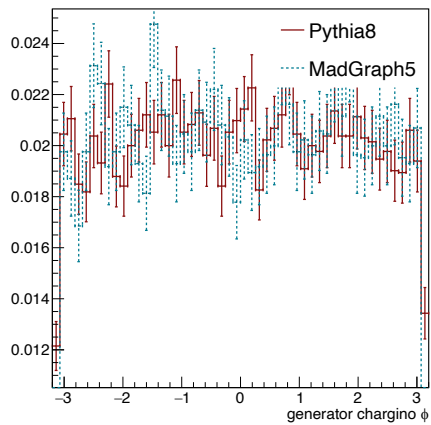

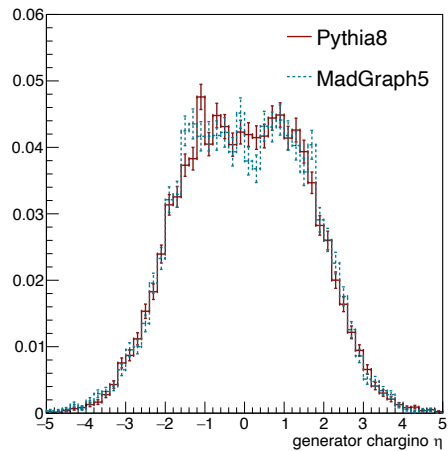

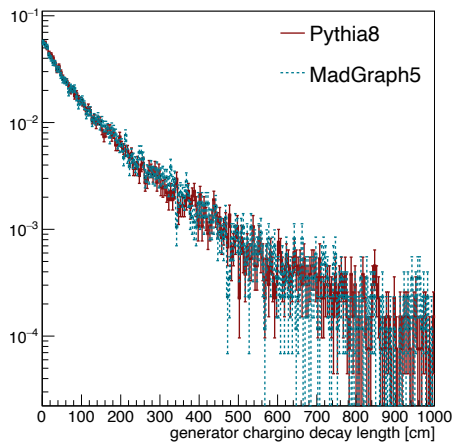

### ❑ Triggering Issues

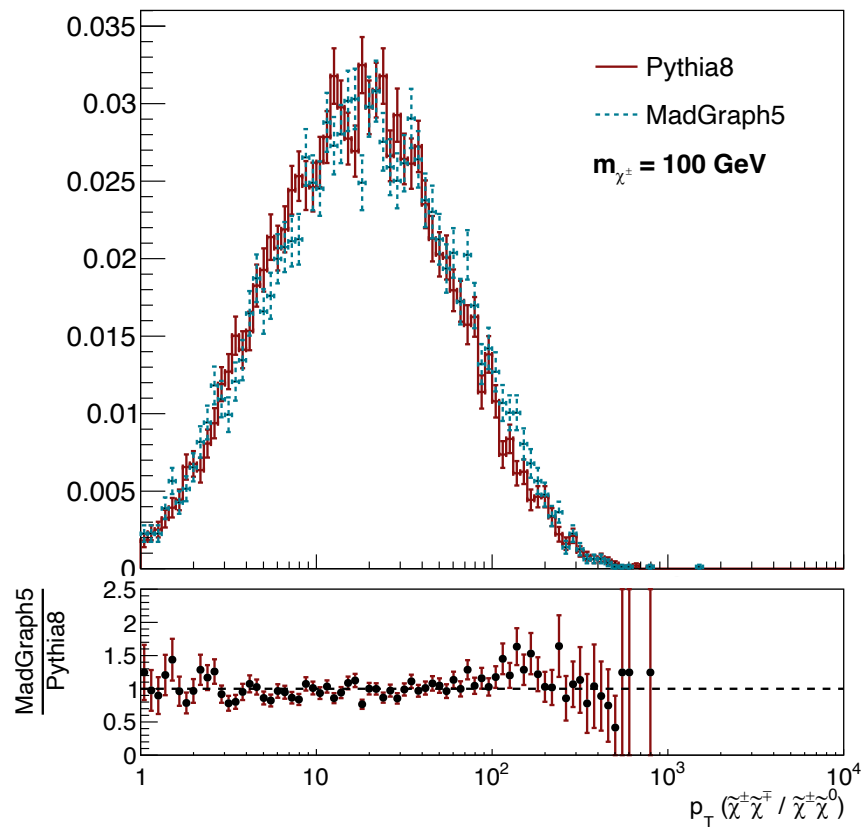

- Missing  $E_T$
- Hard Jets

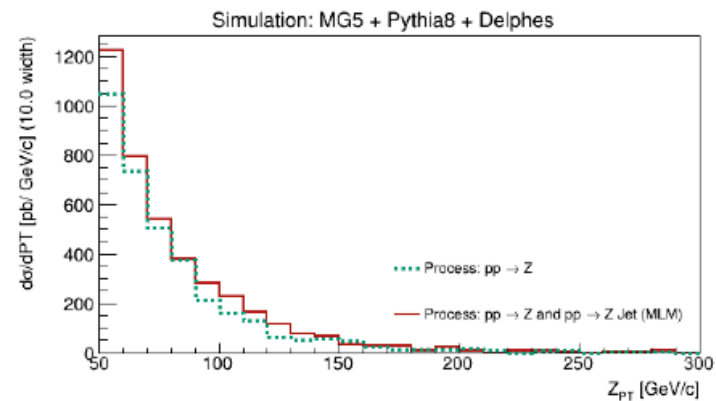

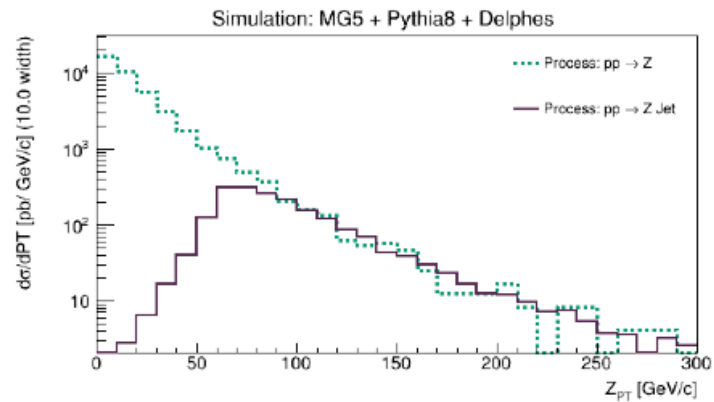

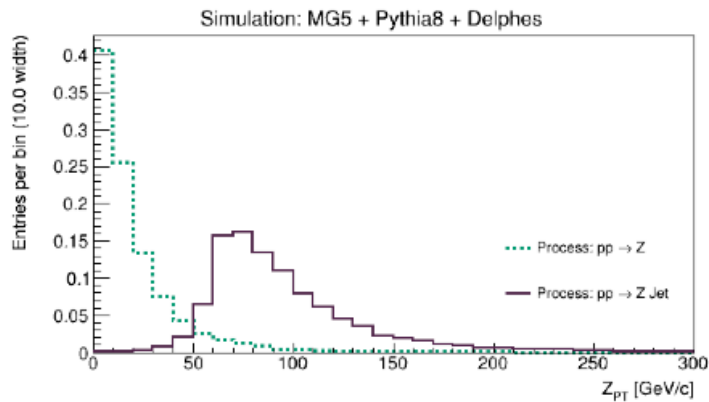

### ❑ Correct Missing $E_T$ profile:

- Using Madgraph + Pythia
- Extra Jet in the hard process
- Merging scheme

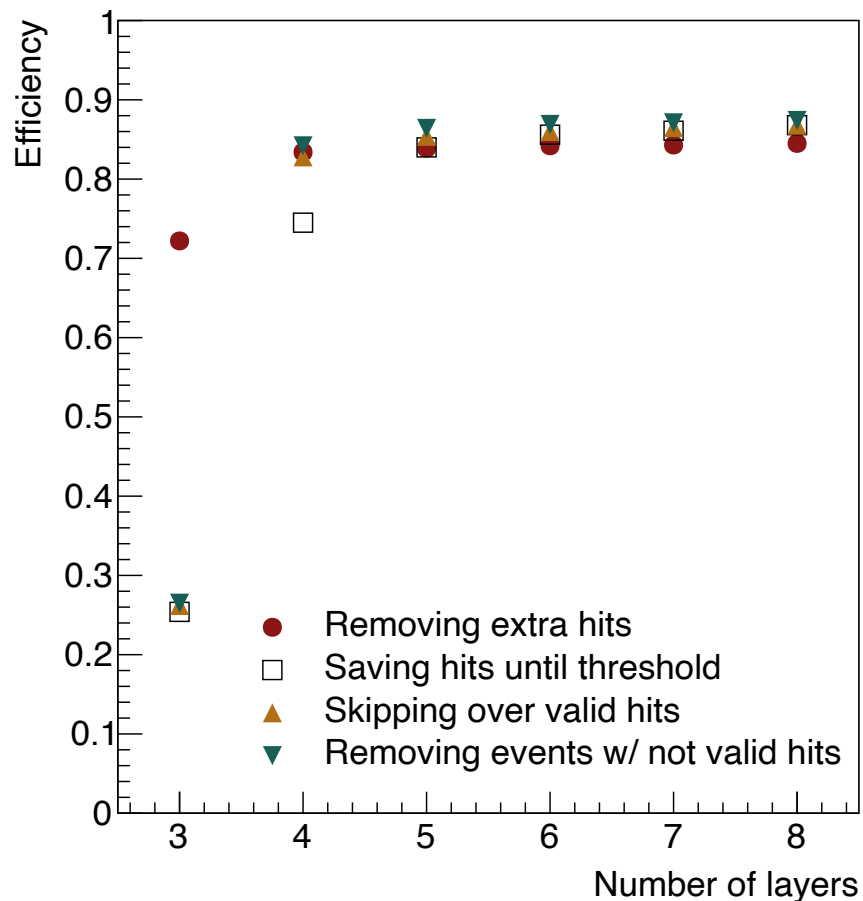

# Short Track Reconstruction

- Identification of short track
  - Missing Hits
  - Track reconstruction efficiency
  - Signal Simulation
- Background estimation
  - Instrumental bg
    - Muons or electrons with no calorimeter deposit
    - Fake tracks

# Prospect

## Ongoing

- Signal validation
- Trigger
  - Missing Et +jets
- Background estimation via Machine Learning
  - Fake track
  - Charged leptons

## New Channels and Students

- Phd: Julia Leite and Bruno Lopes
- Master: Cauê Sousa and Stephanie Dardengo
