Correlating *W***-Boson Mass Shift** with Muon g - 2**Anomaly in the 2HDM**

Tuesday 7 June 2022 16:30 (15 minutes)

In this talk, I shall describe how the recent high precision measurement of the W-boson mass by the CDF collaboration and the muon (g-2) anomaly are correlated in the context of the two Higgs doublet model. The charged and neutral scalars of the model cannot be heavier than about 600 GeV for a simultaneous explanation of the two anomalies. The entire parameter space of the model can be tested at the LHC by a combination of same sign dimuon signals in $pp \rightarrow (\mu^+ \mu^+ jj + \not \!\!E_T)$ and $pp \rightarrow (\mu^+ \mu^- \tau^+ \tau^- + X)$ signals.
