

Filter Monitors and Noise in IP3

Annika Nordt for the BLM team

MPP meeting 21th of May 2010

8 monitors with:

C=47nF, R=150KOhm

(since startup Feb. 2010)

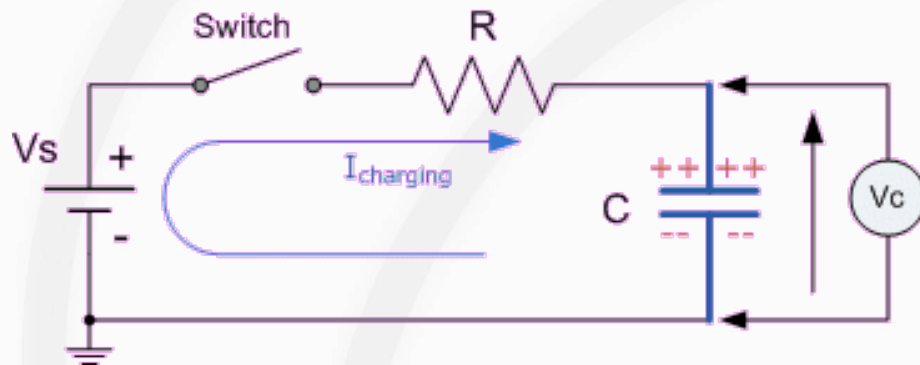

- Reason: allow for overinjection and test collimation regions (LHC-BLM-ECR-0004 and 0005)
- BLMEI.06R7.B2I10_TCP.A6R7.B2
- BLMEI.06R7.B2I10_TCHSV.6R7.B2
- BLMEI.06R3.B2E10_TCHSH.6R3.B2
- BLMEI.04R8.B2E20_TDI.4R8.B2
- BLMEI.06L3.B1I10_TCHSH.6L3.B1
- BLMEI.06L7.B1E10_TCHSV.6L7.B1
- BLMEI.06L7.B1E10_TCP.A6L7.B1
- BLMEI.04L2.B1E20_TDI.4L2.B1
- 2 TDI monitors with `is_connected_to_BIS=1`
- 6 monitors in collimation regions with `is_connected_to_BIS=0`

30 monitors with:

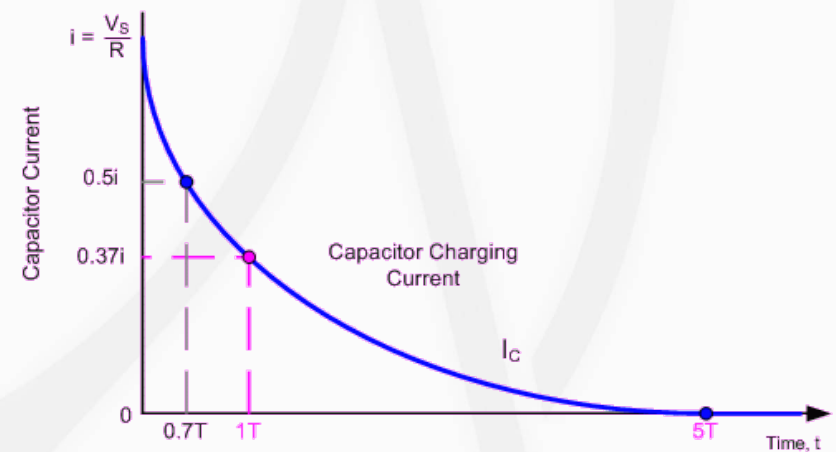

C=2.2nF, R=150KOhm

(since 28.4.2010)

- Reason: allow for high intensity injection (LHC-BLM-ECR-0003)
- BLMQI.08L2.B1E10/20/30_MQML
- BLMQI.07L2.B1E10/20/30_MQM
- BLMQI.06L2.B1E10/20/30_MQML
- BLMEI.06L2.B1E10/20/30_MSIB
- BLMEI.06L2.B1E10/20/30_MSIA
- BLMQI.08R8.B2E10/20/30_MQML
- BLMQI.07R8.B2E10/20/30_MQM
- BLMQI.06R8.B2E10/20/30_MQML
- BLMEI.06R8.B2E10/20/30_MSIB
- BLMEI.06R8.B2E10/20/30_MSIA
- Only external monitors in L2 and R8
- `is_connected_to_BIS=1` for all monitors

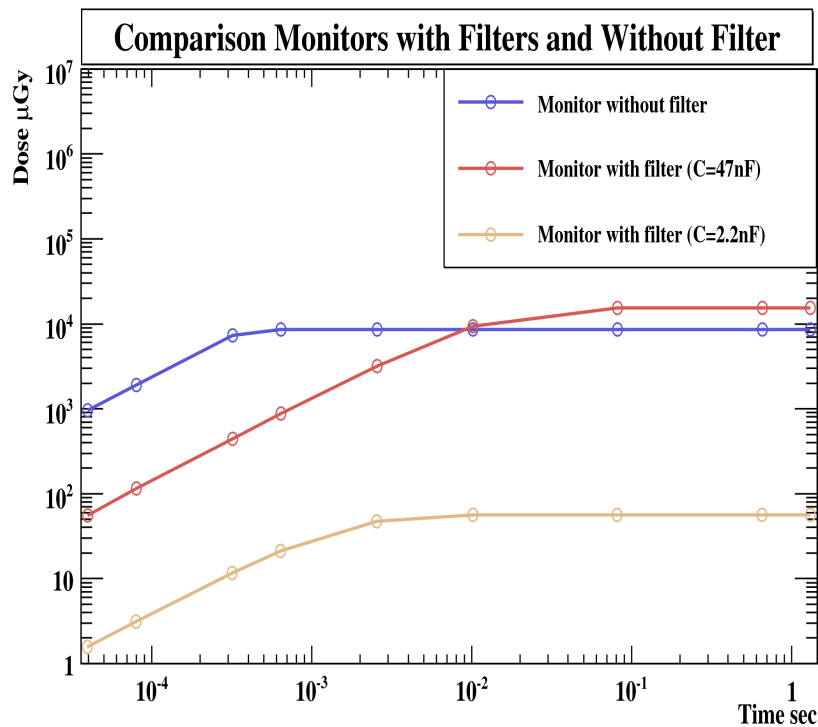

$$\tau = R \cdot C$$

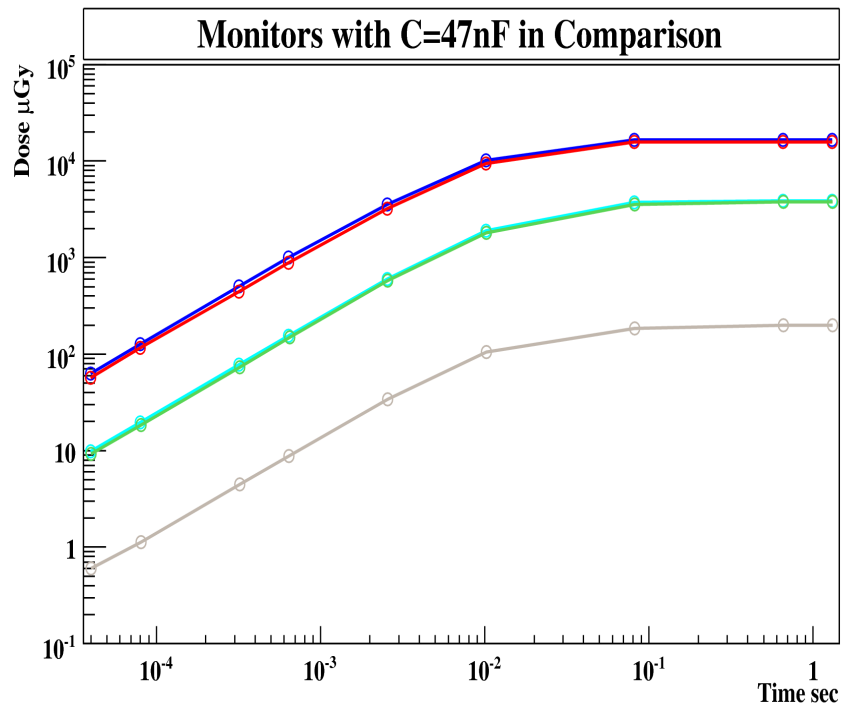

$$V_c = V(1 - e^{-t/RC})$$

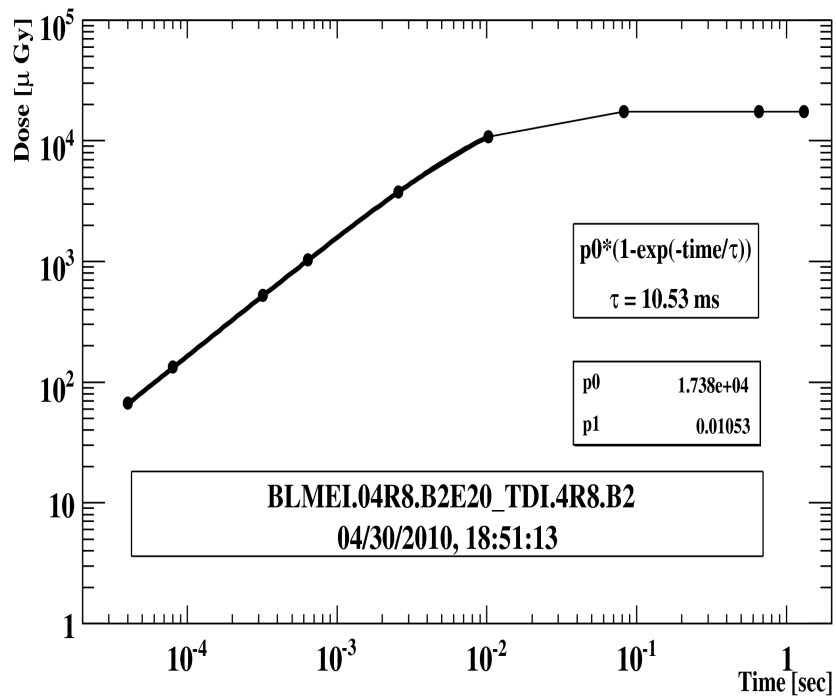

- RC time constant: time needed to charge the capacitor 63% of full charge; or to discharge to 37% of its initial voltage
- Theoretical values for installed filters:
 $t=7.0\text{ms}$ ($C=47\text{nF}$, $R=150\text{K}\Omega$)
 $t=0.3\text{ms}$ ($C=2.2\text{nF}$, $R=150\text{K}\Omega$)

Beam Loss Measurements with Filter Monitors

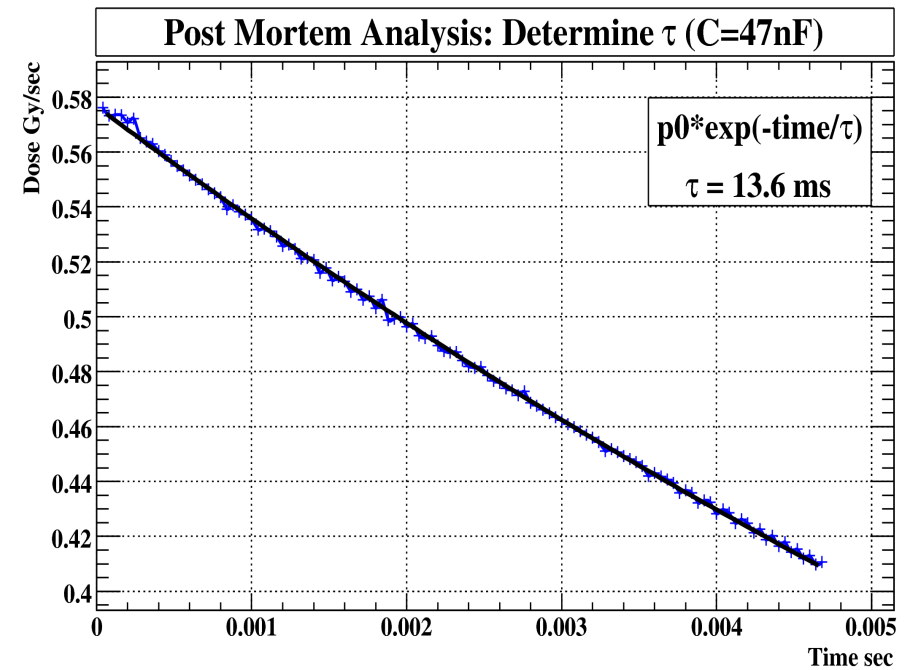

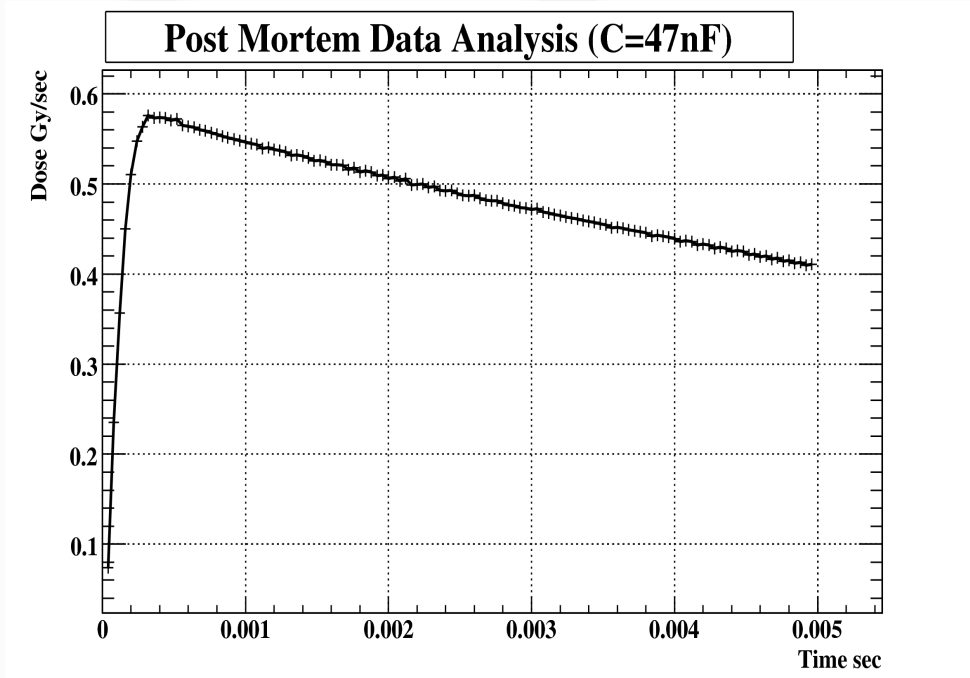

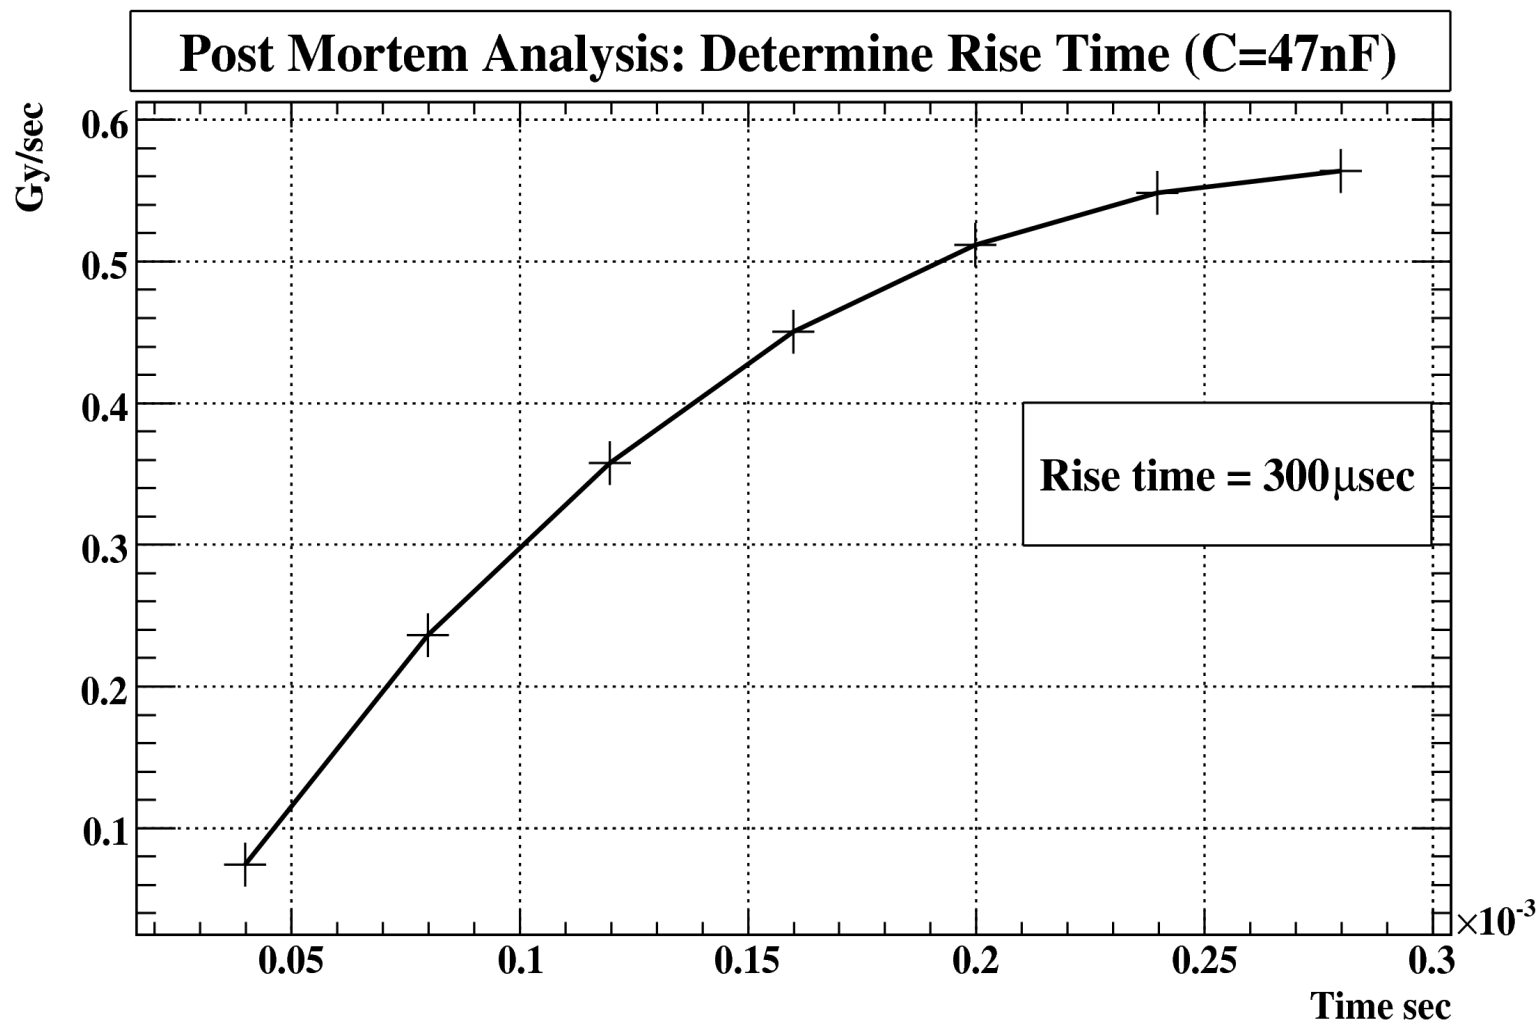

Use data from measurement DB

Use Post Mortem data

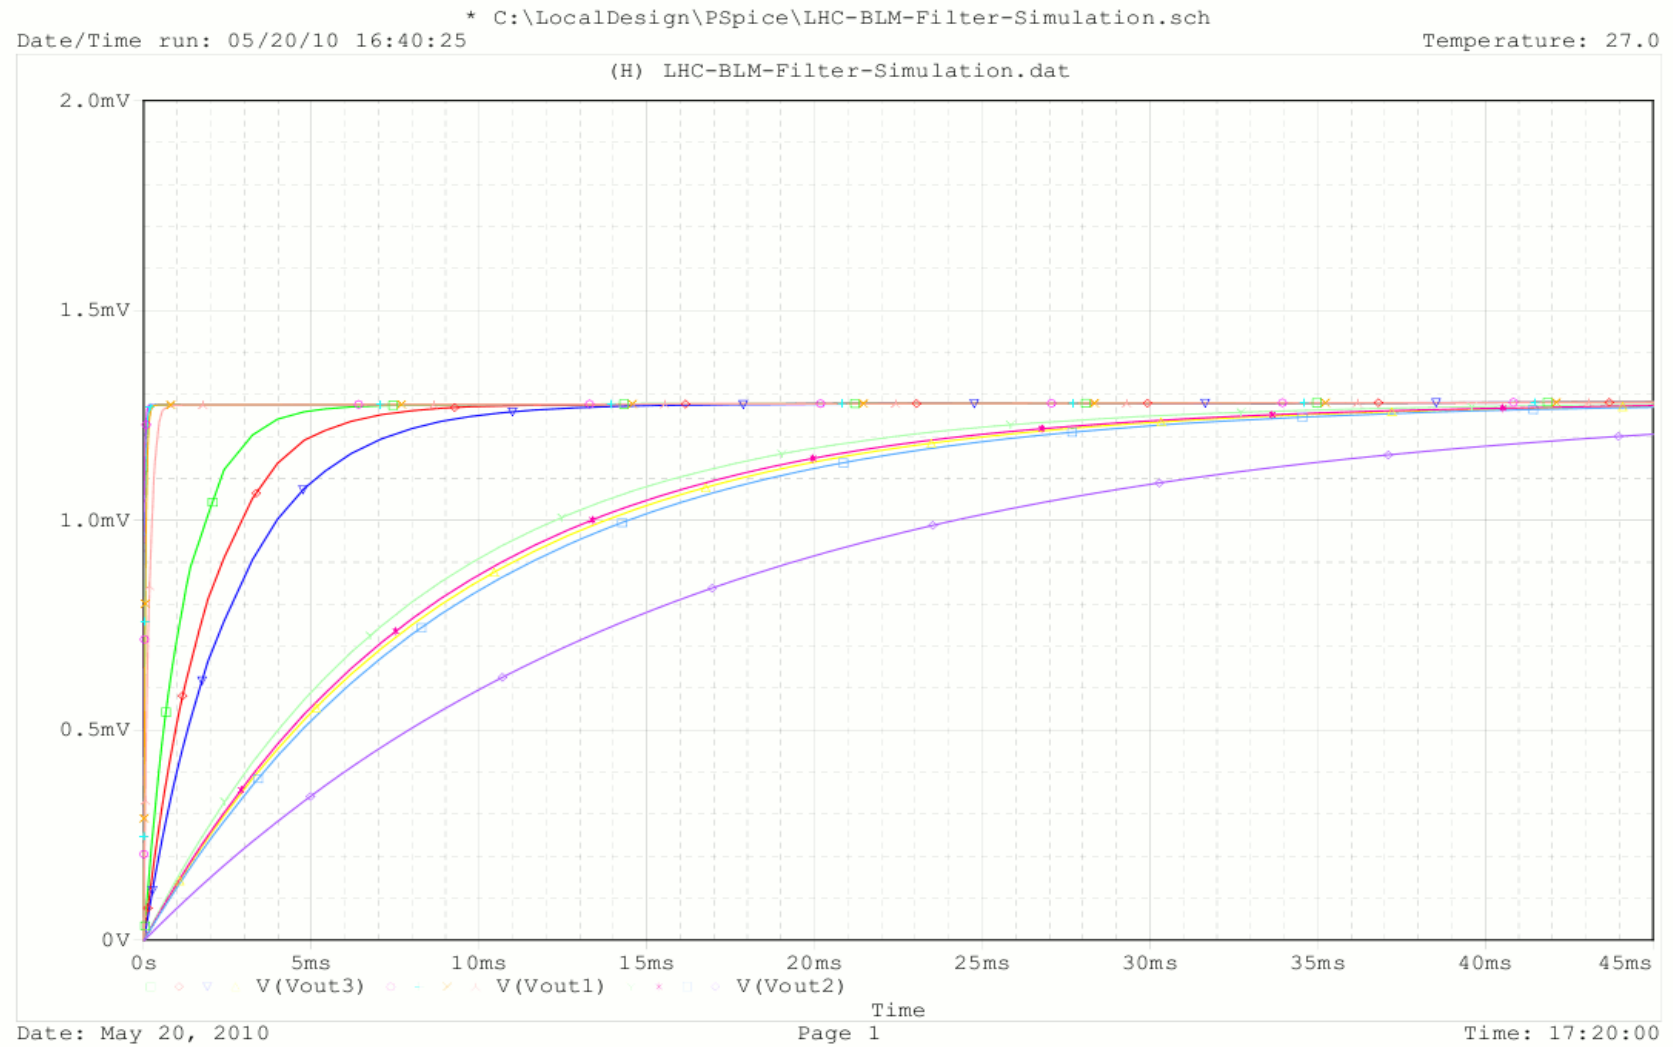

Example for BLMEI.06R3.B2E10_TCHSH.6R3.B2:
 $t = 13.6 \text{ ms}$ (PM)
 $t = 13.9 \text{ ms}$ (Meas DB)

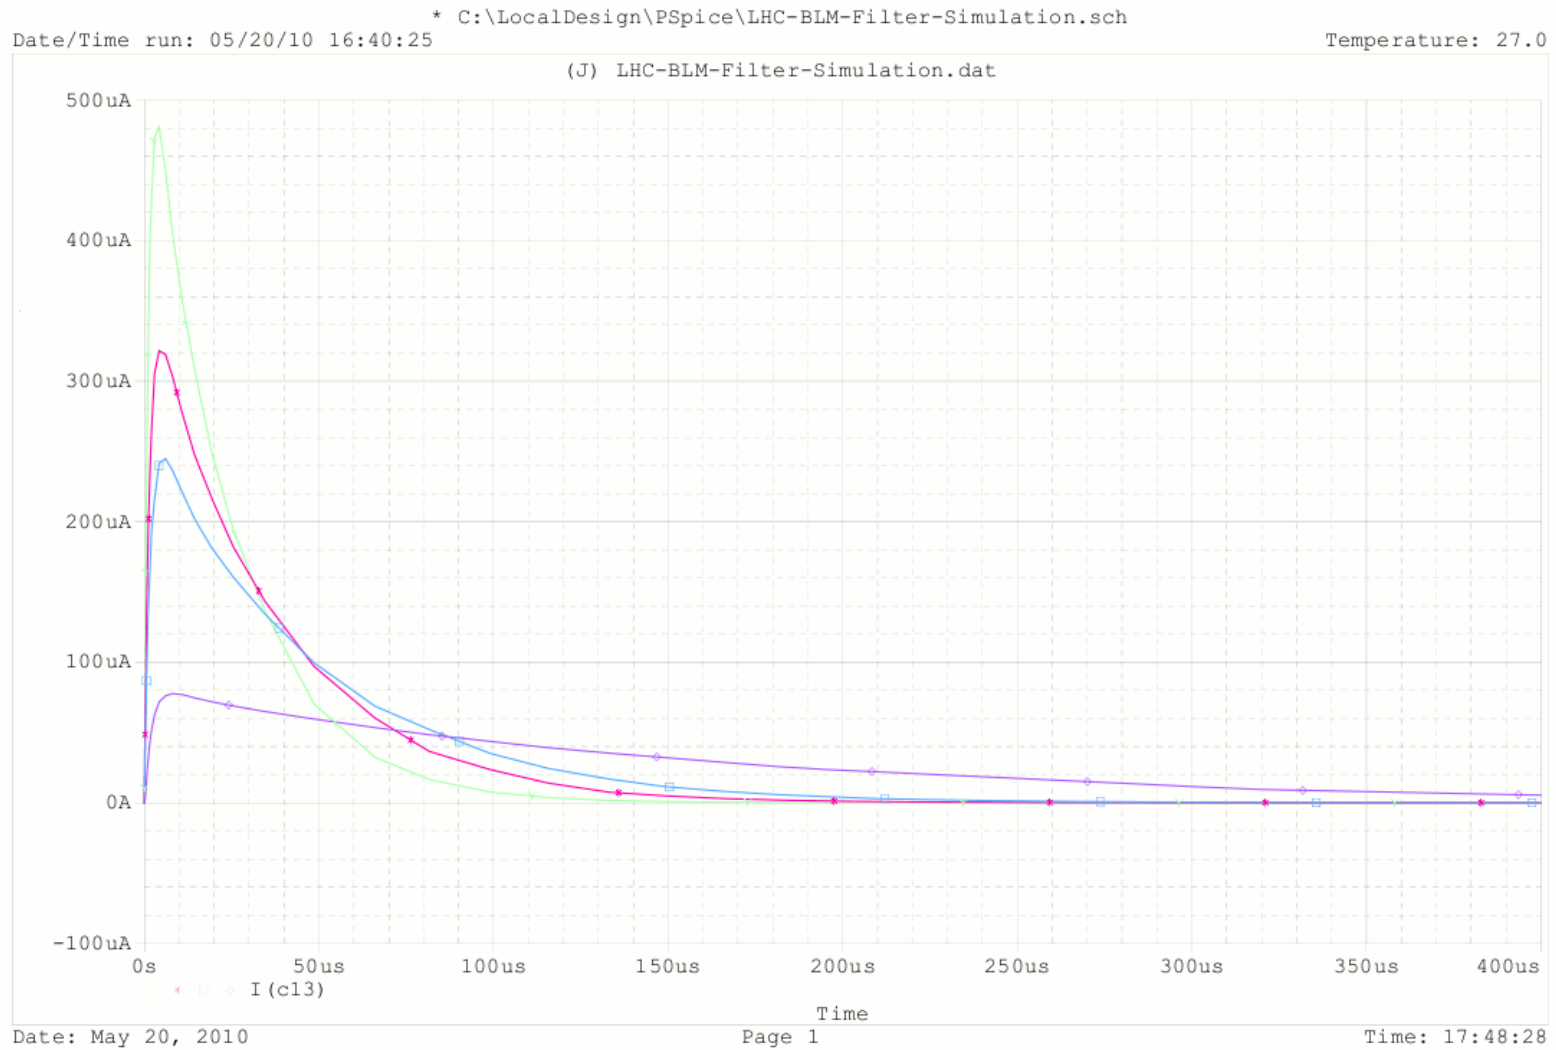

Simulations Results

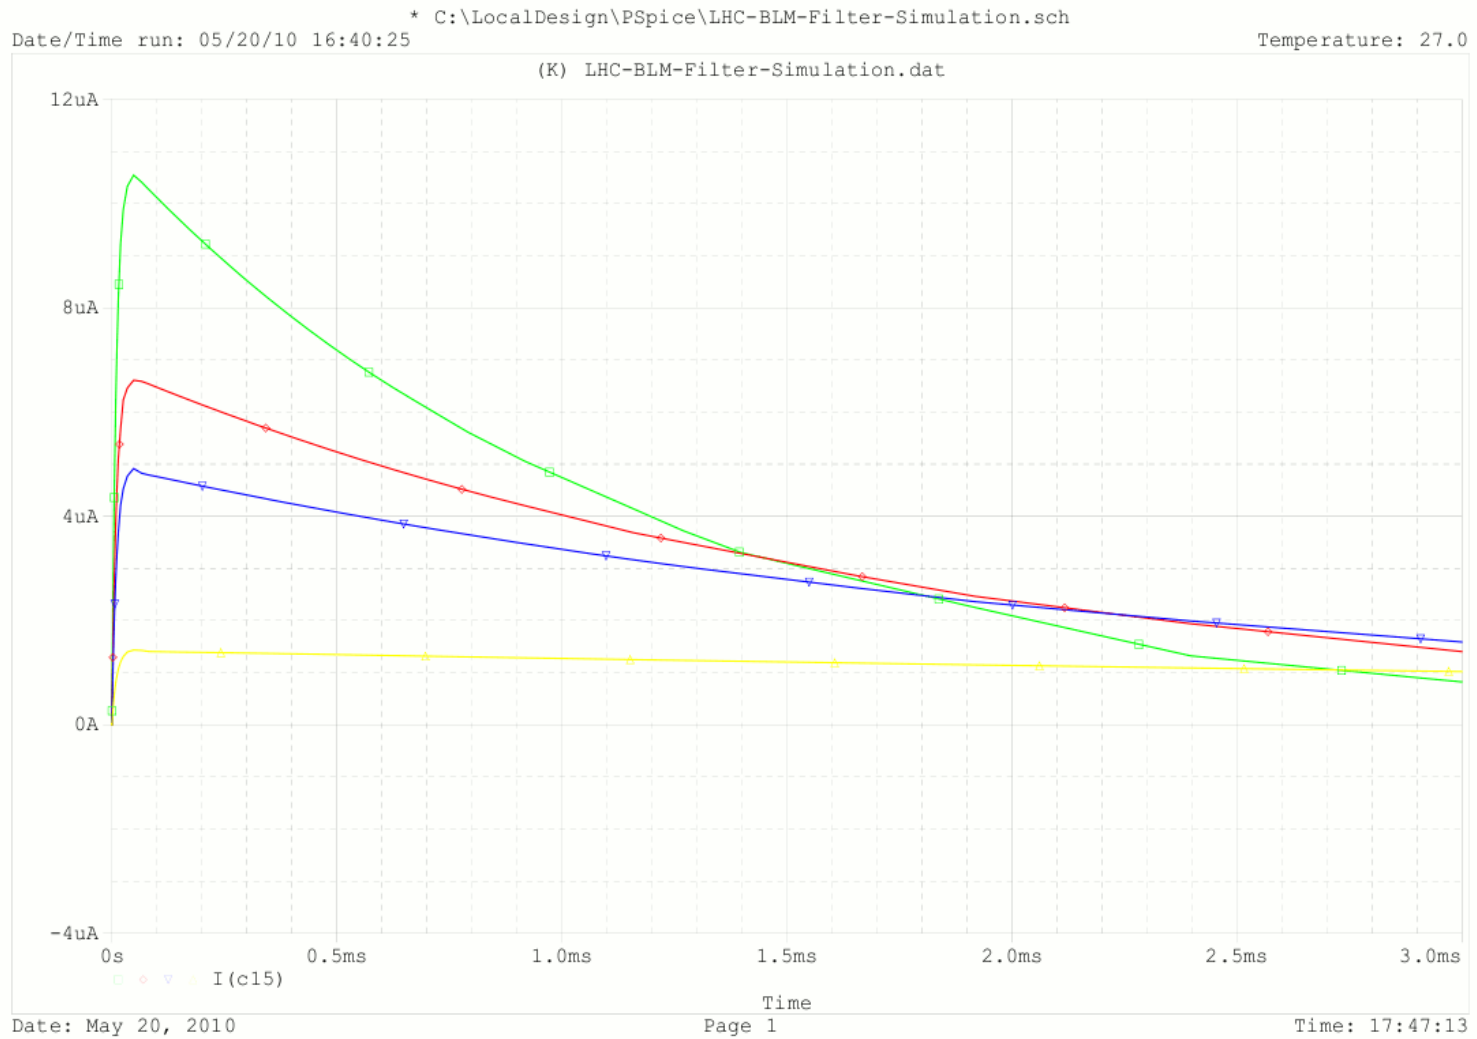

Simulations Results: Current (no Filter)

Simulations Results: Filter (C=2.2nF)

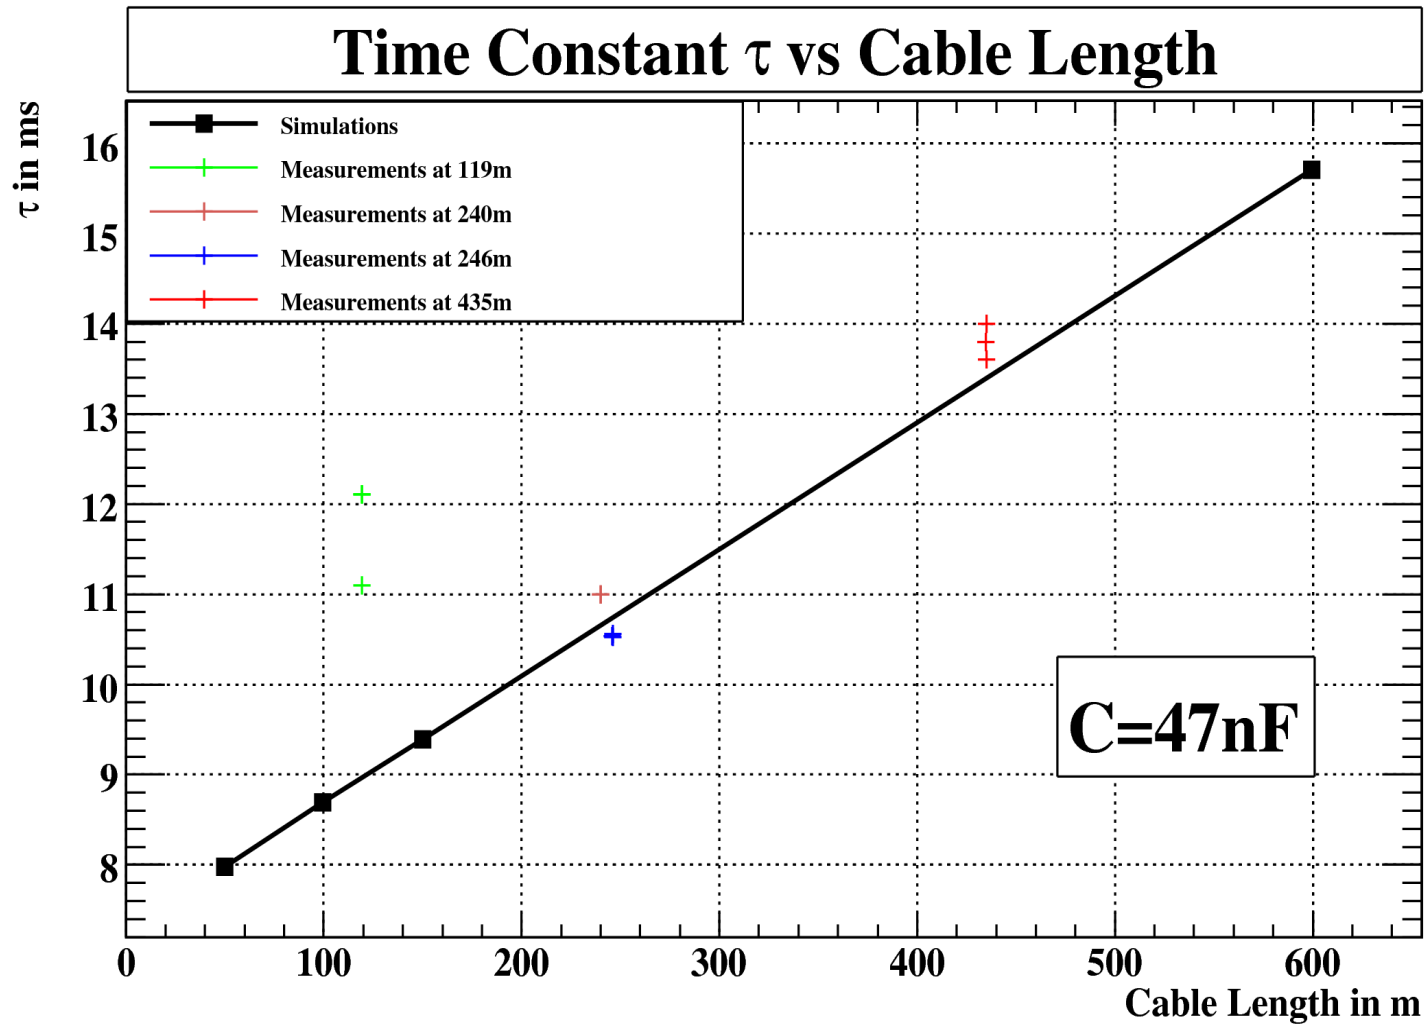

Simulations Results: Current (C=47nF)

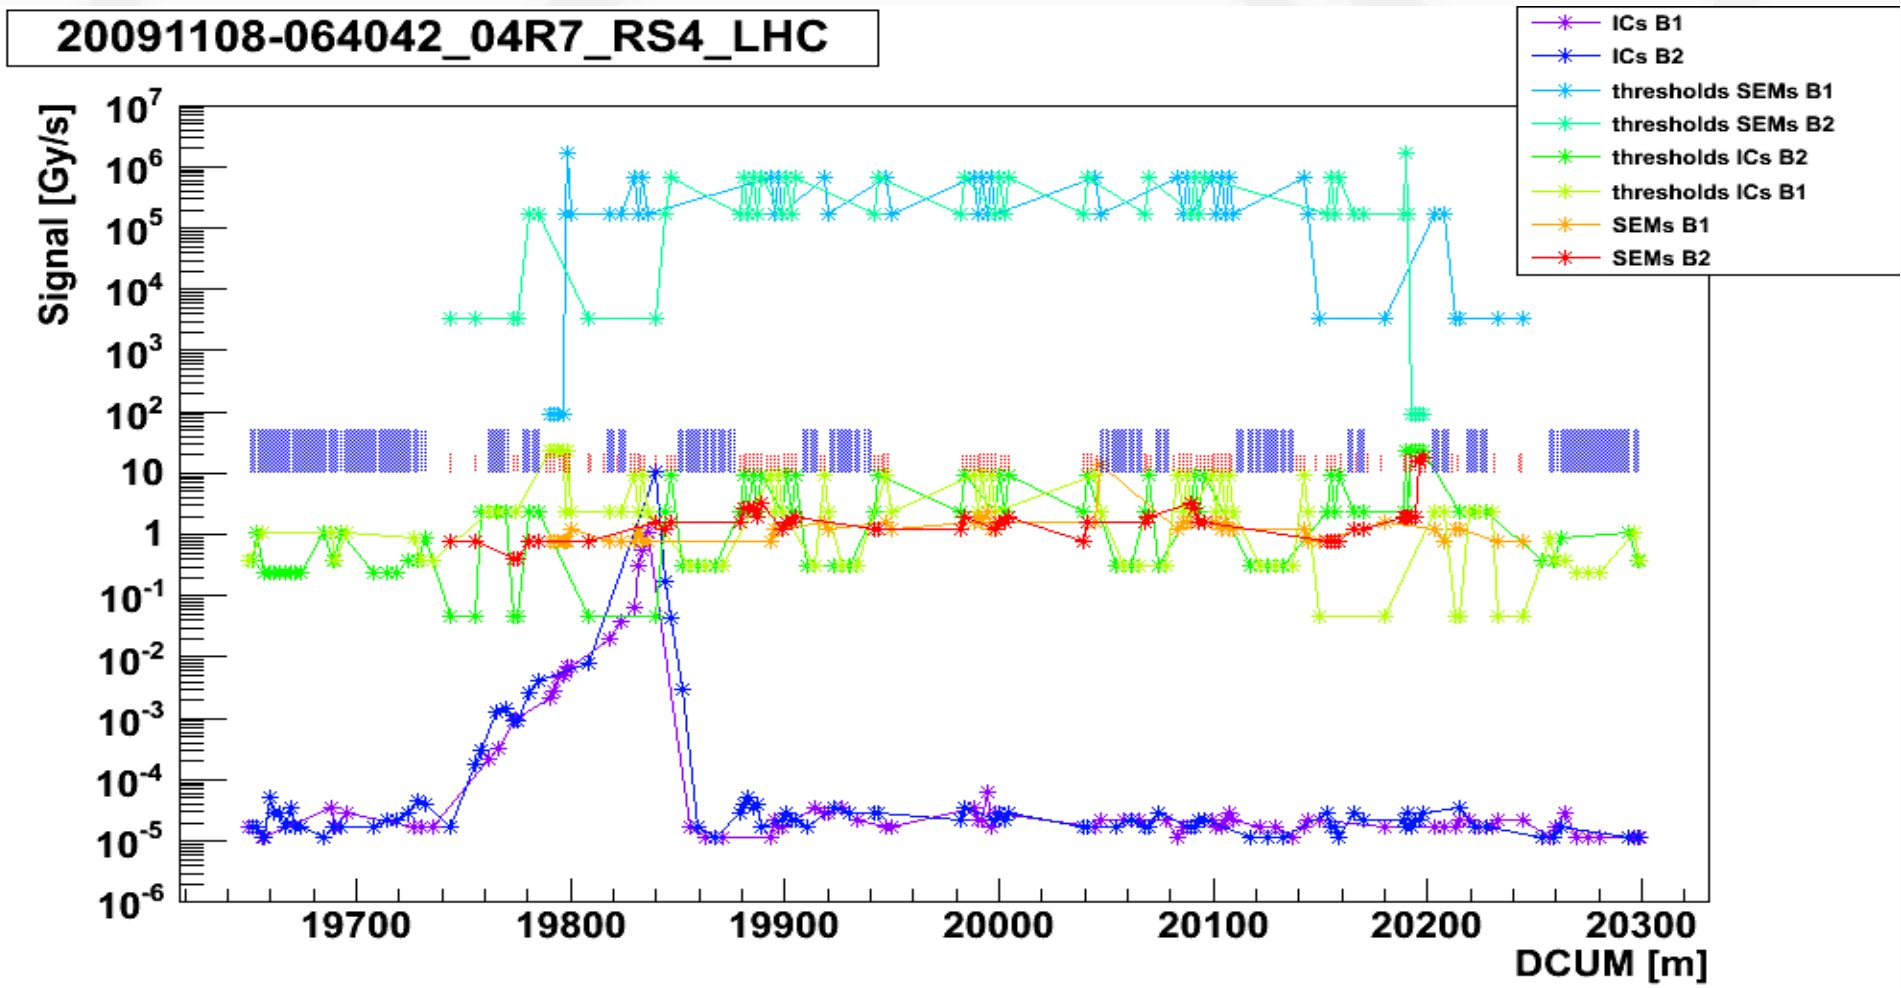

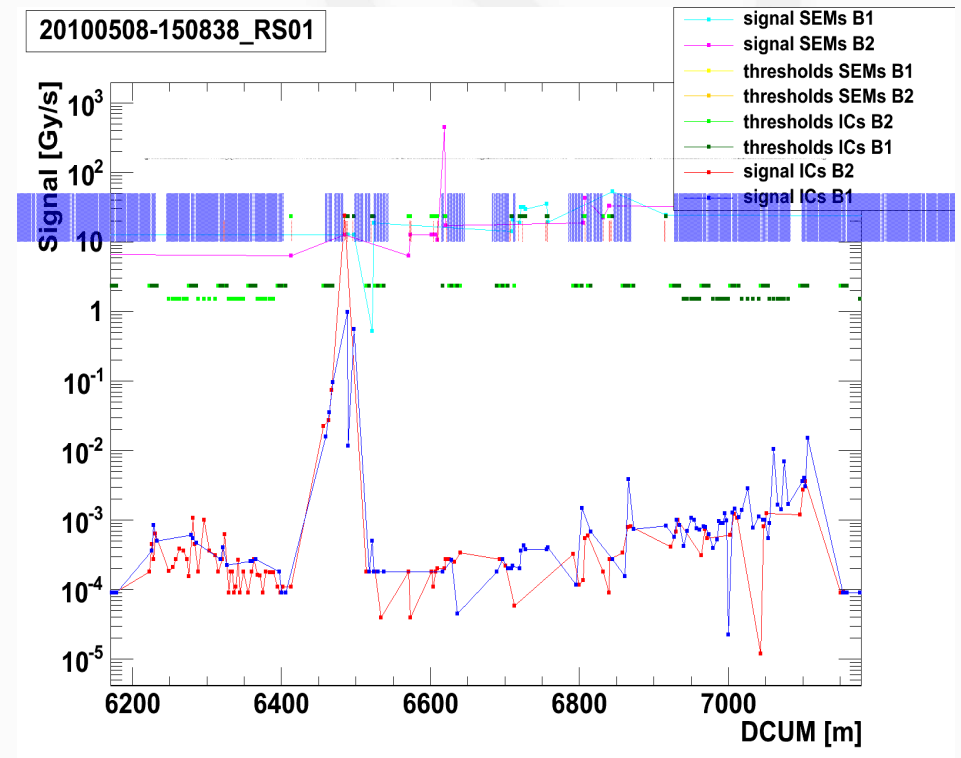

Simulations Results vs Measurements

length	Tau, C=2.2n F Sim	Tau, C=2.2n F Meas.	Rise Time, C=2.2n F Sim.	Ratio Filter/ no Filter S.		Tau, C=47n F Sim.	Tau, C=47n F Meas.	Rise Time, C=47n F Sim.	Ratio Filter/ no Filter S.
50	1.2e-3	1.4e-3	4.9e-5	45.7		8.0e-3	x	4.9e-5	304
100	1.9e-3	1.8e-3	4.9e-5	48.7		8.7e-3	1.2e-2	4.9e-5	221
150	2.7e-3	x	4.9e-5	49.9		9.4e-3	1.1e-2	4.9e-5	182
600	9.0e-3	x	4.9e-5	54.3		1.6e-2	1.4e-2	4.9e-5	95.2

Shooting on TCLA

Shooting on TCLA (beam 1 and beam 2)

- Checked network structure
- HV on the front ends is stable
- No dependence on HV box found
- It can be not excluded that the effects come from signal cables
- Expected non-conformity in HV distribution
- Expected difference in cable types
- Investigations and analysis ongoing

The measured losses are equal in IP3 and in IP7 and they are equal for Left and Right side in IP3

→ Functionality of the system is given and protection can be assured

- Two errors in threshold settings:
 - Family: THRI_TDI_RC (2 filter monitors)
 - Wrong during 30.4.-6.5.2010
 - Family: THRI.06_7_TCLA_A and THRI.06_7_TCLA_B
 - Wrong during 30.4.-20.5.2010
- Consequences:
 - 1 person to introduce thresholds
 - 1 person to check settings
 - Software changes, more safety and automatic checks (protocols, reports)
