EP-ESE-BE Seminar

3rd Python Technical Discussion

9-MAR-2022
Python Technical Discussions

• Series of meetings on Python for every-day work in EP-ESE-BE and beyond.

• Aim is to get inspiration, to find common solutions, to exchange experience on how to make our daily work easier, by using Python.

• Today we have the third meeting; the first and second meeting had a number of short presentations on various aspects of the use of Python.

• There was already one presentation on Jupyter Notebook by Max, which sparked a lot of interest – thanks to Max!

• For today, Eduardo volunteered to give us a –live– tutorial on Jupyter Notebook, building an example, showing how to develop scripts for collecting data, and how to visualize and analyse them.

• We have foreseen time for questions and discussion at the end – do not hesitate to ask your questions then.
