Quantum microscopy with van der Waals heterostructures

Tuesday, 13 December 2022 16:00 (30 minutes)

We demonstrate a microscopy technique that employs spin defects in hexagonal boron nitride as quantum sensors to perform magnetic and temperature imaging of van der Waals materials.

Primary author: TETIENNE, Jean-Philippe (RMIT University)

Co-authors: HEALEY, Alex (University of Melbourne); SCHOLTEN, Sam (University of Melbourne); YANG, Tieshan (University of Technology Sydney); SCOTT, John (University of Technology Sydney); ABRAHAMS, Gabriel (University of Melbourne); ROBERTSON, Islay (RMIT University); RAHMAN, Sharidya (Australian National University); LU, Yuerui (Australian National University); KIANINIA, Mehran (University of Technology Sydney); AHARONOVICH, Igor (University of Technology Sydney)

Presenter: TETIENNE, Jean-Philippe (RMIT University)

Session Classification: Precision and Quantum Sensing Workshop

Track Classification: PQS2022: PQS: Precision and Quantum Sensing Workshop
