## 3D printing Bullseye glass preform for fibre drawing

*Tuesday, December 13, 2022 12:15 PM (15 minutes)*

Additive manufacturing makes it possible to produce complex structures and individual pieces directly from the CAD file within short production times. This research focuses on a filament extrusion method, where the objects are directly printed from a soda-lime glass filament.

**Primary authors:** RADIONOVA, Anna (Institute for Photonics and Advanced Sensing (IPAS) & School of Physical Sciences, The University of Adelaide, Adelaide 5005, SA, Australia); SCHATNER, Erik (Institute for Photonics and Advanced Sensing (IPAS) & School of Physical Sciences, The University of Adelaide, Adelaide 5005, SA, Australia); EBENDORFF-HEIDEPRIEM, Heike; Mrs DENKER, Meike (Institute for Machine Elements, Design and Manufacturing, Freiberg, Germany); Dr KOUTSONIKOLAS, Tony (Maple Glass Printing Pty Ltd, Melbourne, VIC, 3070, Australia); PAN, Xuanzhao (School of Physical Sciences, The University of Adelaide, Adelaide, SA, 5005, Australia); WEI, Yunle (The University of Adelaide)

**Presenter:** PAN, Xuanzhao (School of Physical Sciences, The University of Adelaide, Adelaide, SA, 5005, Australia)

**Session Classification:** 7th International Workshop on Speciality Optical Fibres

**Track Classification:** WSOF: WSOF: Industrial applications and commercialisation
