Optimal mitigation of random-telegraph-noise dephasing by spectator-qubit

Tuesday 13 December 2022 18:45 (15 minutes)

We develop optimal measurement and control strategies for spectator-qubits(SQ) to mitigate data-qubit dephasing caused by a random telegraph process. Our findings show that the SQ, like Dynamical Decoupling and Quantum Error Correction, may effectively increase the coherence of the data-qubit.
