Polarization dependent quantum correlation measurements of two nitrogen-vacancy color centres in diamond

Thursday 15 December 2022 14:45 (15 minutes)

By focusing on the second-order correlation as a function of emission polarization, we demonstrate additional information gained from using polarization combined correlation optics and pave the way for future protocols in sub-diffraction limited particle localization and characterization via quantum imaging.

Author: PENG, Davin Yue Ming (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University)

Co-authors: Prof. GREENTREE, Andrew D. (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University); Prof. GIBSON, Brant C. (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University); Mr WORBOYS, Josef G. (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University); Dr CAPELLI, Marco (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University); Dr REINECK, Philipp (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University); Dr SUN, Qiang (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University)

Presenter: PENG, Davin Yue Ming (Australian Research Council Centre of Excellence for Nanoscale Biophotonics, RMIT University)

Session Classification: Precision and Quantum Sensing Workshop

Track Classification: PQS2022: PQS: Precision and Quantum Sensing Workshop
