Intrinsic quantum confinement and charge-carrier localisation in metal halide semiconductors

Monday 12 December 2022 11:00 (30 minutes)

Metal halide semiconductors have emerged as attractive materials for solar cells. In this talk I will discuss some of our recent work exploring the optoelectronic properties of lead-iodide perovskites and silver-bismuth halide semiconductors.

Author: HERZ, Laura (University of Oxford)

Presenter: HERZ, Laura (University of Oxford)

Session Classification: Conference on Optoelectronic and Microelectronic Materials and Devices

Track Classification: COMMAD: Emerging materials: 2D, oxide, organic, and perovskite materials
