## Glowworm Capture Threads Studied by AFM

*Tuesday 13 December 2022 15:00 (15 minutes)*

Tapping mode atomic force microscopy was used to reveal nano-scale features and material variation near the surface of capture threads of glowworm (*Arachnocampa tasmaniensis*). Unstretched and stretched threads are contrasted.

**Primary author:** Prof. KANE, Deb (Australian National University)

**Co-authors:** Dr HE, Bo-Ching (Center for Measurement Standards, Industrial Technology Research Institute); Dr PIORKOWSKI, Dakota (Department of Life Science, Tunghai University,); Prof. TSO, I-Min (Department of Life Science, Tunghai University,); Dr BLAMIREs, Sean (Evolution and Ecology Research Centre, University of New South Wales)

**Presenter:** Prof. KANE, Deb (Australian National University)

**Session Classification:** AIP: Condensed Matter, Materials and Surface Physics

**Track Classification:** AIP Congress: AIP: Condensed Matter, Materials and Surface Physics
