Multi-scale modelling of STM devices with in-plane degenerately doped contacts

Tuesday 13 December 2022 18:45 (15 minutes)

We demonstrate a hybrid quantum-semiclassical multi-scale modeling approach to characterize degenerately phosphorus-doped in-plane contacts and their impact on the energy states of the precision placed donor quantum dots under different bias conditions in silicon STM devices.

Author: MUNIA, Mushita Masud (University of New South Wales)

Co-authors: HUQ, Abu Mohammad Saffat-Ee; SIMMONS, Michelle (The University of New South Wales); RAH-MAN, Rajib (The University of New South Wales); HSUEH, Yu-Ling (The University of New South Wales)

Presenter: MUNIA, Mushita Masud (University of New South Wales)

Session Classification: Poster session

Track Classification: COMMAD: COMMAD: Semiconductor materials, devices, and technologies
