Studies on the sensitivity in measuring anomalous quartic gauge boson couplings using single and multi parametric models in the Effective Field Theory framework.

Wednesday 7 September 2022 19:05 (25 minutes)

We present studies on the sensitivity in measuring anomalous quartic gauge boson couplings using single and multi parametric models in the Effective Field Theory framework. The studies are performed on the diboson ZZ production channel in pp collision at the LHC energies, where Z bosons decay to electron positron pairs or muon+ muon-pairs.

Is this abstract from experiment?

No

Name of experiment and experimental site

N/A

Is the speaker for that presentation defined?

No

Details

Alexandros Marantis, Hellenic Open University, Greece, <http://physicslab.eap.gr>

Internet talk

Yes

Author: Mr MARANTIS, Alexandros (Hellenic Open University)

Co-authors: Prof. LEISOS, Antonios (Hellenic Open University); Dr TSIRIGOTIS, Apostolos (Hellenic Open University); Dr ILLADIS, Dimitrios (Hellenic Open University)

Presenter: Mr MARANTIS, Alexandros (Hellenic Open University)

Session Classification: Poster Session

Track Classification: Main topics: High Energy Particle Physics
