

# Photon-triggered jets as probes of multi-stage jet modification

**Chathuranga Sirimanna** for the **JETSCAPE** Collaboration  
Wayne State University

5<sup>th</sup> September 2023

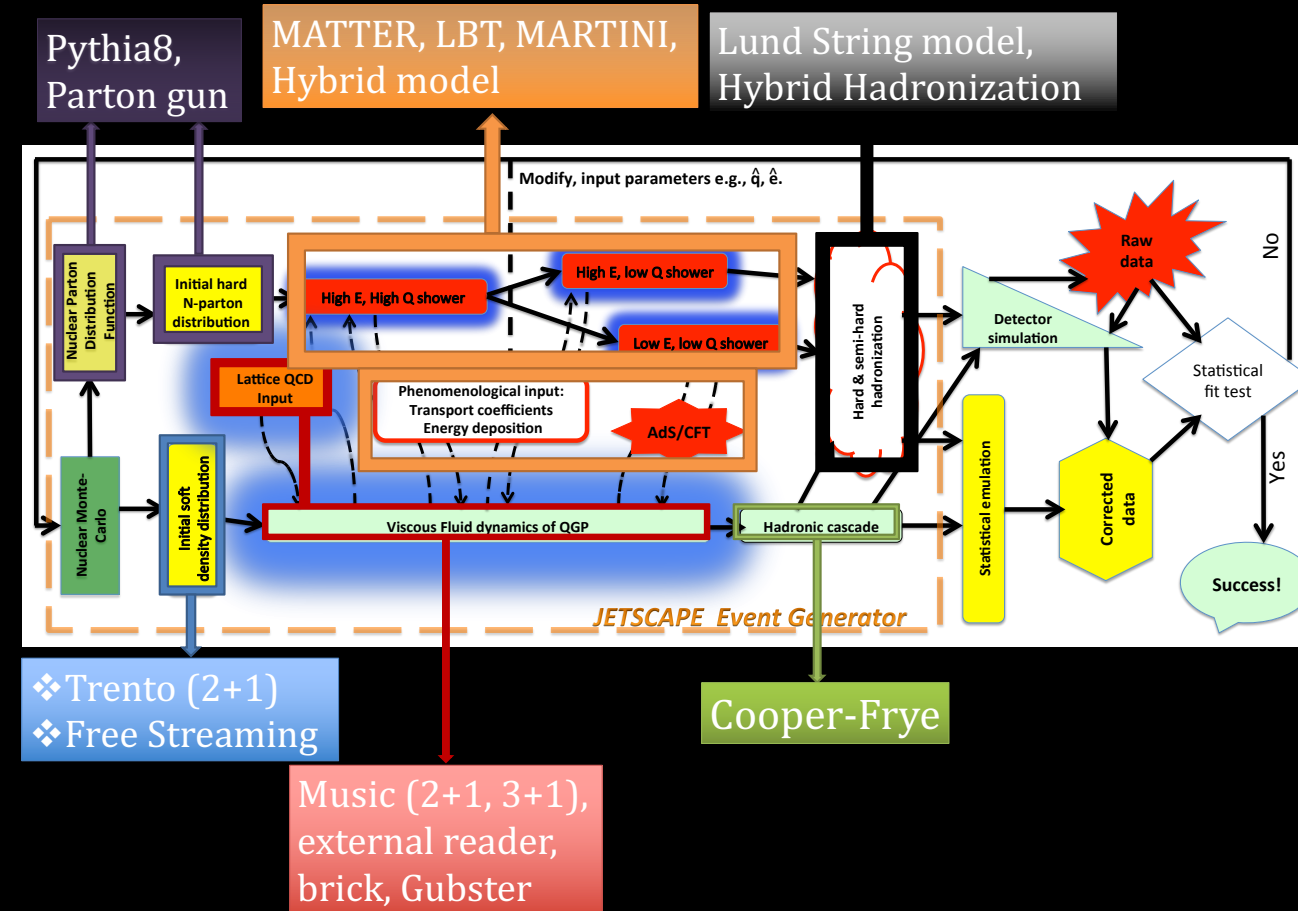

# Outline

- Introduction: JETSCAPE framework and multistage evolution
- Photon triggered jets
- Simulating jet evolution with JETSCAPE framework
- Simultaneous description of leading hadron and jet spectrum
- This study: 5.02 TeV
  - ❖  $\gamma$ -jet asymmetry: central and peripheral events
  - ❖  $\gamma + 2$  jets
  - ❖ Groomed jets substructure using photon triggered jets
- Summary

# Introduction

- **JETSCAPE**: General, modular and extensive framework
- Latest version of JETSCAPE publicly available at <https://github.com/JETSCAPE/JETSCAPE>
- No single model can describe all stages of jet evolution
- Multi-stage jet evolution
  - ❖ Different stages depending on the virtuality,  $Q$  and energy,  $E$  of the partons
- One can customize the framework by using their own modules
- ASCII, Gzip, and HepMC output formats
- Manual ([arXiv:1903.07706](https://arxiv.org/abs/1903.07706)), JETSCAPE PP19 tune ([arXiv:1910.05481](https://arxiv.org/abs/1910.05481)), JETSCAPE AA tune ([arXiv:2204.01163](https://arxiv.org/abs/2204.01163))

# JETSCAPE framework: Multistage Evolution

- Large  $Q$ , Large  $E$ : Dominated by radiation with few scatterings (DGLAP, HT)
  - ❖ MATTER (*Majumder(13), Kordell, Majumder(17), Cao, Majumder(17)*)
- Small  $Q$ , Large  $E$ : Scattering driven emission, mostly by medium effects (Transport, AMY, HT)
  - ❖ LBT (*Wang, Zhu(13), Luo, et al.(15,18), Cao, et al.(16,17), He, et al.(18)*)
  - ❖ MARTINI (*Schenke, Gale, Jeon(09), Park, Jeon, Gale(17, 18)*)
- Small  $Q$  &  $E$ : Nearly thermal, strongly coupled (AdS/CFT)
  - ❖ AdS/CFT (*Chesler, Rajagopal(14, 15), Pablos, et al.(15, 16, 17), and others*)

Virtuality Separation Scale:  $Q_0$

Switching between modules parton by parton depending on the virtuality and energy

Large  $Q$ :  $Q > Q_0$

Small  $Q$ :  $Q < Q_0$

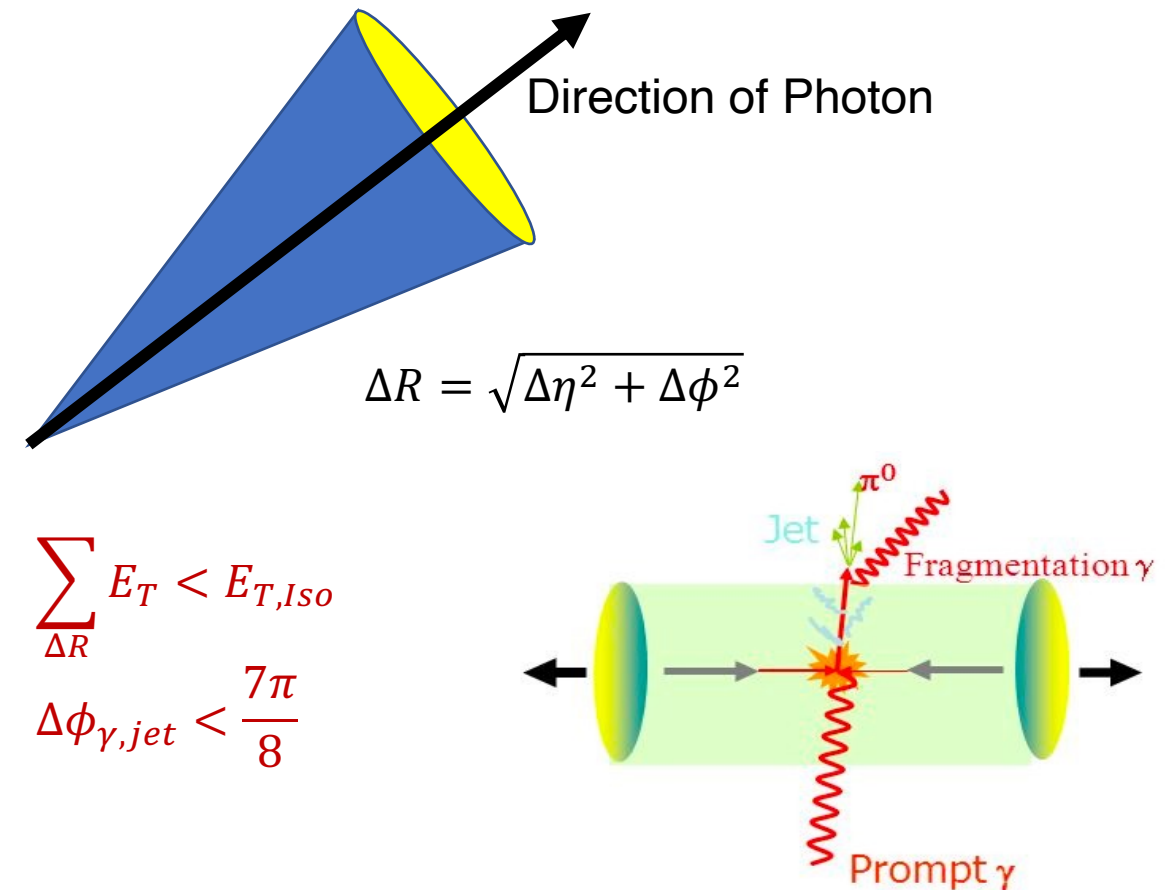

# Prompt photons as Probes of QGP

- Prompt photons - produced directly in the hard subprocesses
- Can be used to estimate the energy and the direction of jet initiating parton (before the energy loss) – Calibrated probe of the QGP
  - ❖ Limited Statistics: Challenging to measure experimentally
- Important probe to study jet energy loss (Wang, Huang, and Sarcevic, PRL 77 (1996) 231-234)
- Isolation criteria is necessary to identify the prompt photons
  - ❖ Same isolation criteria used in experimental analysis (CMS-HIN-13-006, CMS-HIN-16-002, PLB 789 (2019) 167)
- Isolated photons mainly consist of prompt photons
  - Isolated Non-prompt photons make considerable contribution

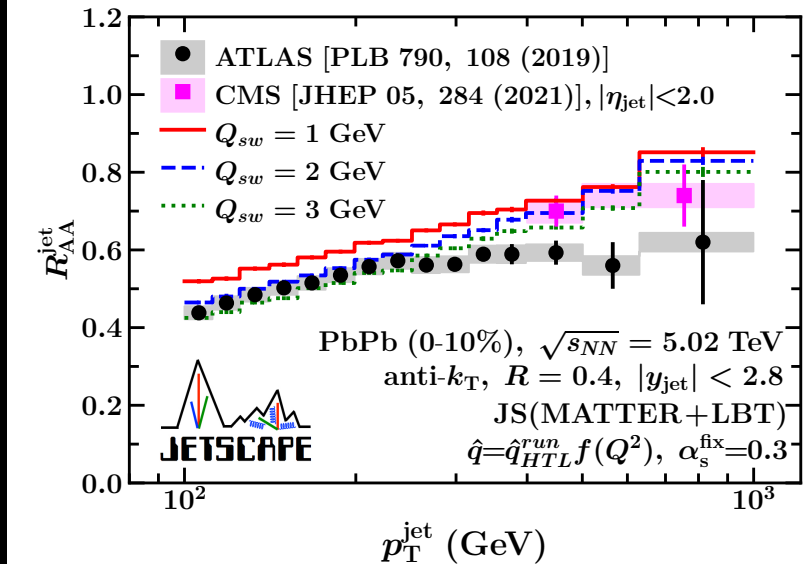

# Simulating Jet Evolution

- **p-p baseline:** Pythia for hard scattering and MATTER for shower
- **PbPb:**
  - ❖ Virtuality separation scale,  $Q_0 = 2 \text{ GeV}$
  - ❖ MATTER+LBT with recoil
  - ❖ Colorless hadronization (color is randomly assigned) with Pythia Lund String model
  - ❖ Event by event hydro
- **p-p and PbPb:**
  - ❖ Prompt photons, photons from intermediate shower and fragmentation photons
  - ❖ Same isolation criteria used in experimental analysis

# Simultaneous Description of Leading Hadrons and Jets

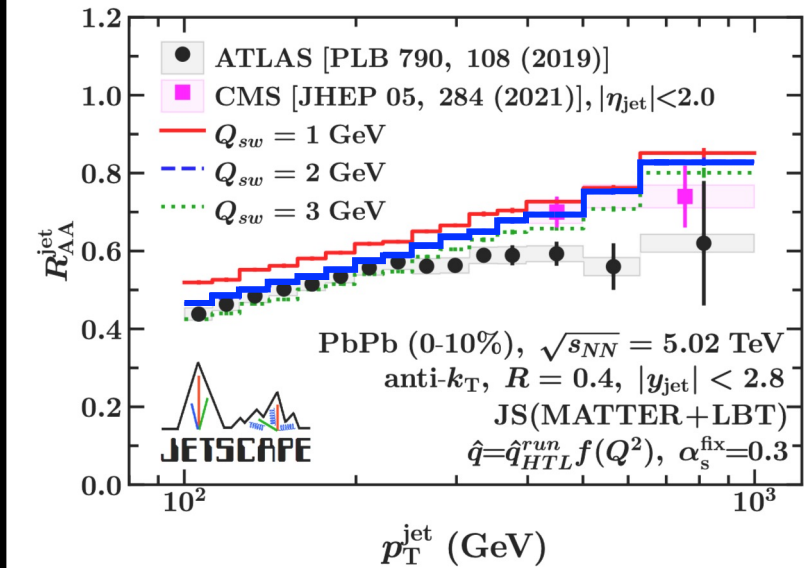

- Parameters tuned for simultaneously describe leading hadron and jet spectra
  - ❖ Blue line of each plot:  $Q_{sw} = 2 \text{ GeV}$ ,  $\alpha_s^{fix} = 0.3$ ,  $\tau_0 = 0.6 \text{ fm}/c$ , and  $T_c = 160 \text{ MeV}$
  - ❖ AA22 tune
- Not tuned using Bayesian calibration
  - ❖ See the talks by Andi Mankolli and Raymond Ehlers for more details of Bayesian calibration
- Same tune can be used to accurately describe number of different observables (Different  $E_{CM}$ , centrality, etc.)
- JETSCAPE AA paper: Phys.Rev.C 107 (2023) 3, 034911, arXiv: [2204.01163](https://arxiv.org/abs/2204.01163)
  - Further information on parameter tuning

# Simultaneous Description of Leading Hadrons and Jets

# $\gamma$ -jet Asymmetry – p-p

- $\gamma$ -jet Asymmetry:  $X_{J\gamma} = \frac{p_T^{jet}}{p_T^\gamma}$
- 5.02 TeV p-p: Full Events and Prompt Photon Events
  - ❖  $p_T^{jet} > 31.6 \text{ GeV}$ ;  $|\eta_\gamma| < 2.37$  (excluding the region  $1.37 < |\eta_\gamma| < 1.52$ );  $R = 0.4, |\eta_{jet}| < 2.8, |\Delta\phi| > \frac{7\pi}{8}$
  - ❖ Isolation cut ( $E < 3 \text{ GeV}$ )  $\Delta R = \sqrt{\Delta\eta^2 + \Delta\phi^2} = 0.3$
- p-p simulation using JETSCAPE PP19 tune
- Full events: Have better description with relatively large error bars

ATLAS  
[PLB 789, 167-190 (2019)]

# $\gamma$ -jet Asymmetry – Central PbPb

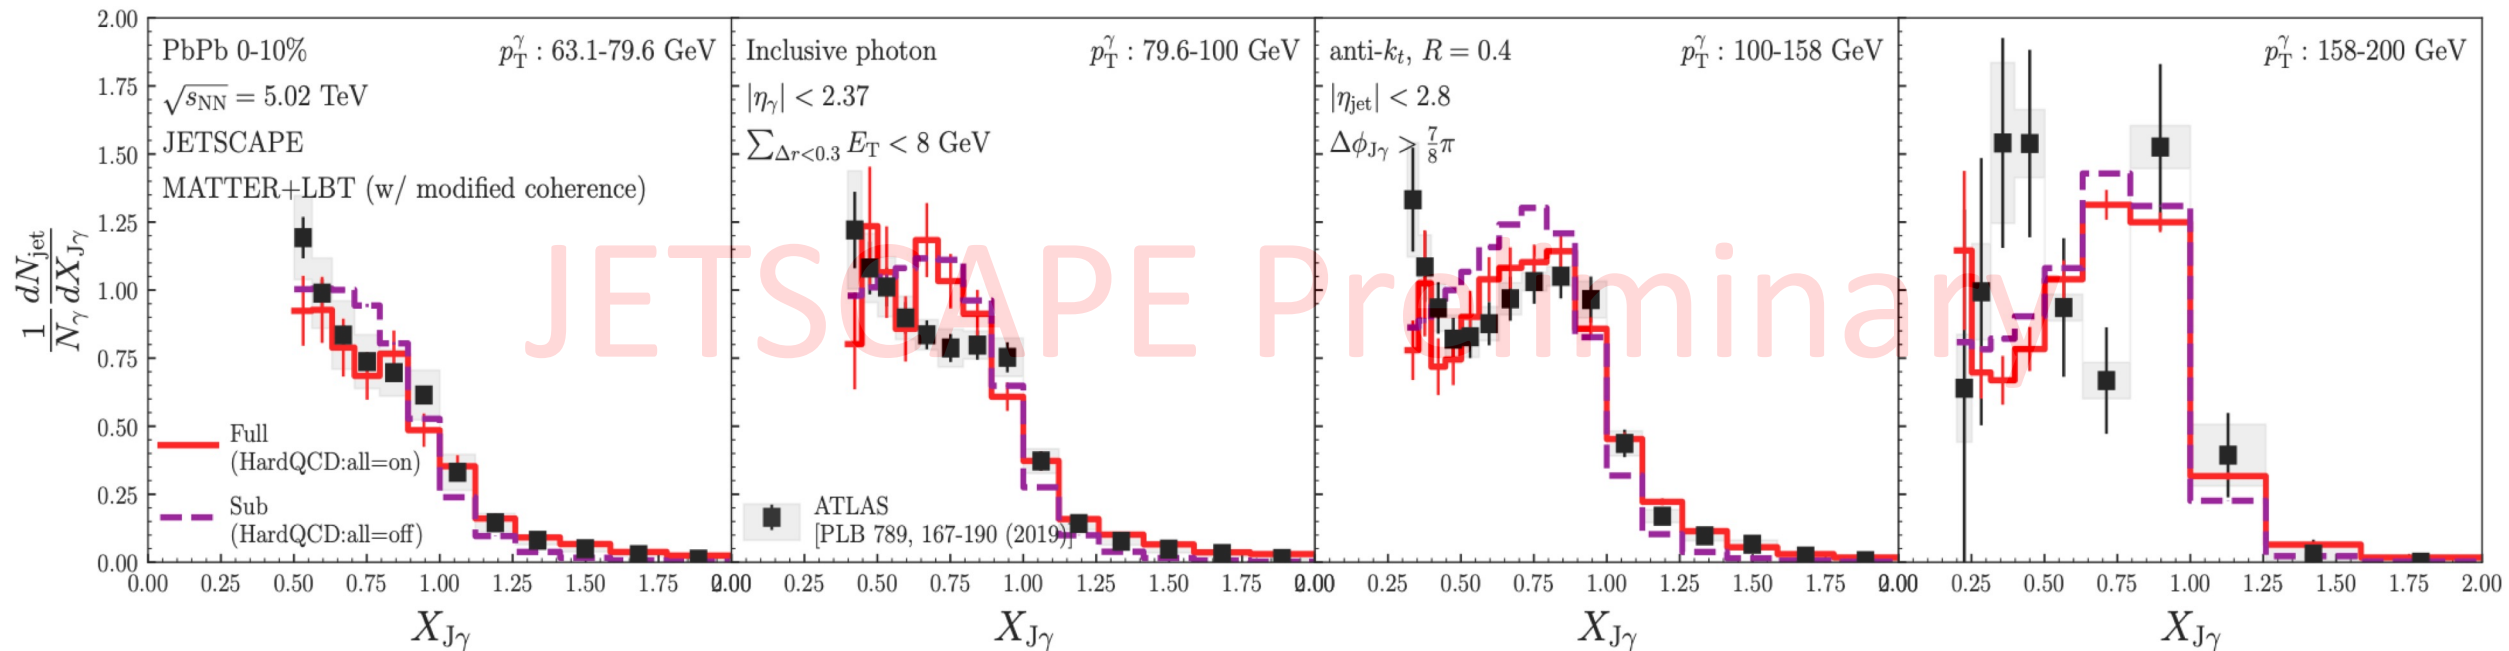

## ➤ 5.02 TeV PbPb: Full Events and Prompt Photon Events

- ❖  $p_T^{jet} > 31.6 \text{ GeV}$ ;  $|\eta_\gamma| < 2.37$  (excluding the region  $1.37 < |\eta_\gamma| < 1.52$ );  $R = 0.4, |\eta_{jet}| < 2.8, |\Delta\phi| > \frac{7\pi}{8}$
- ❖ Isolation cut ( $E < 8 \text{ GeV}$ )  $\Delta R = \sqrt{\Delta\eta^2 + \Delta\phi^2} = 0.3$

## ➤ Unfolded experimental results

## ➤ Full events: Have better description with relatively large error bars

ATLAS  
[PLB 789, 167-190 (2019)]

# $\gamma$ -jet Asymmetry – p-p and Central PbPb

## ➤ 5.02 TeV: Full Events and Prompt Photon Events

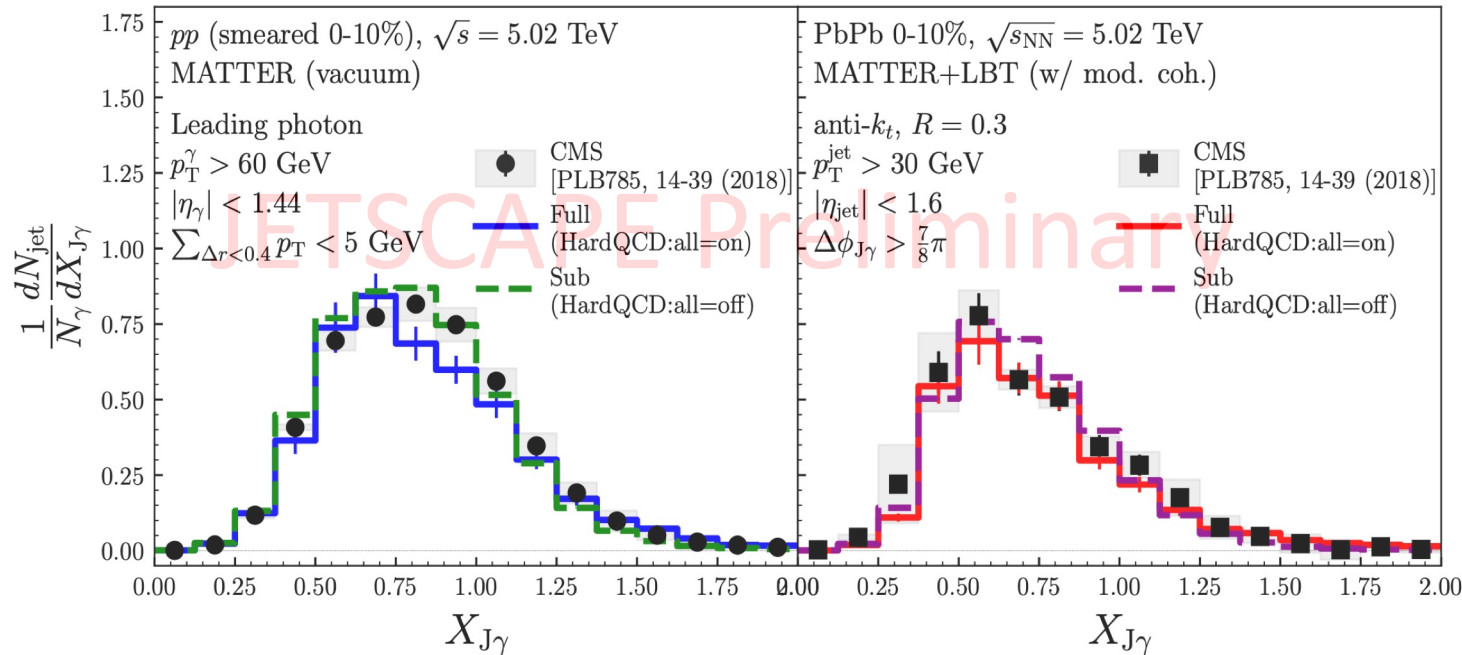

- ❖  $p_T^{\text{jet}} > 30 \text{ GeV}$ ,  $|\eta_\gamma| < 1.44$ ,  $R = 0.3$ ,  $|\eta_{\text{jet}}| < 1.6$ ,  $|\Delta\phi| > \frac{7\pi}{8}$
- ❖ Isolation cut ( $E < 5 \text{ GeV}$ )  $\Delta R = \sqrt{\Delta\eta^2 + \Delta\phi^2} = 0.4$

➤ Full events: Have better description with large error bars

➤ Same JETSCAPE Events

➤ Smeared jet  $p_T$  (p-p and PbPb)

**CMS**  
[PLB 785, 14-39 (2018)]

Smearing Function

$$\sigma(p_T) = \sqrt{C^2 + \frac{S^2}{p_T} + \frac{N^2}{p_T^2}}$$

# $\gamma$ -jet Asymmetry – Peripheral Smeared p-p

## ➤ 5.02 TeV p-p: Full Events and Prompt Photon Events

- ❖  $p_T^{jet} > 30 \text{ GeV}$ ,  $|\eta_\gamma| < 1.44$ ,  $R = 0.3$ ,  $|\eta_{jet}| < 1.6$ ,  $|\Delta\phi| > \frac{7\pi}{8}$
- ❖ Isolation cut ( $E < 5 \text{ GeV}$ )  $\Delta R = \sqrt{\Delta\eta^2 + \Delta\phi^2} = 0.4$

## ➤ Full events: Have better description with large error bars

## ➤ Ratio plots: Shows large deviation at large $X_{J\gamma}$

- ❖ Wide angle photon radiation after initial hard scattering

**CMS**  
[PLB 785, 14-39 (2018)]

# $\gamma$ -jet Asymmetry – Peripheral PbPb

## ➤ 5.02 TeV PbPb: Prompt Photon Events only

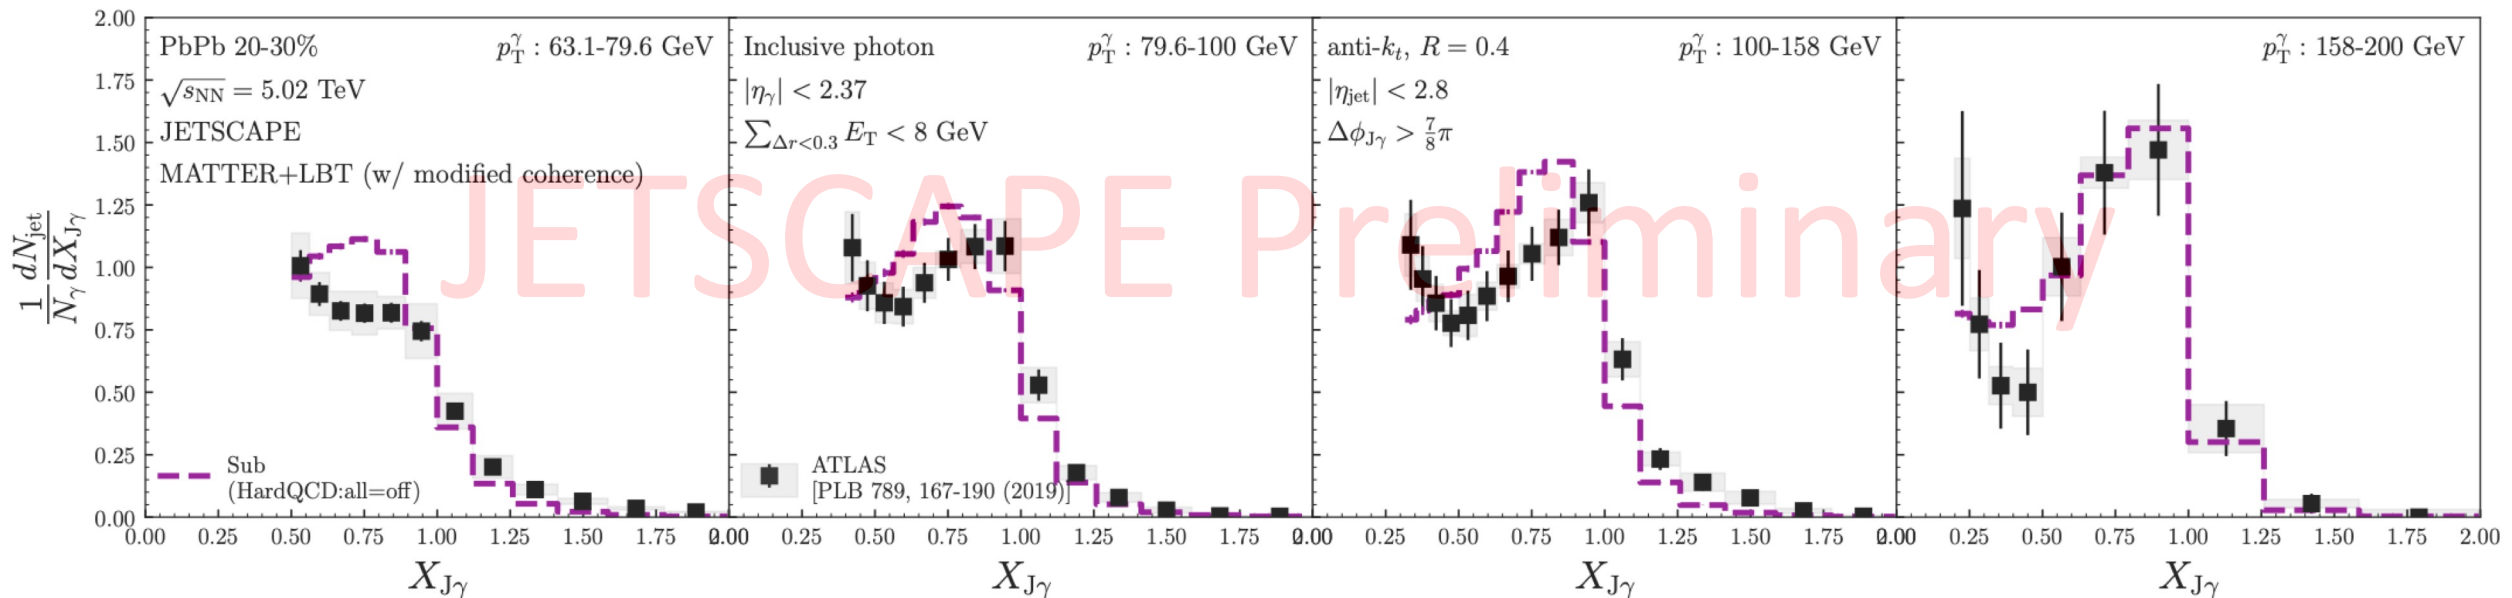

❖  $p_T^{jet} > 31.6 \text{ GeV}$ ;  $|\eta_\gamma| < 2.37$  (excluding the region  $1.37 < |\eta_\gamma| < 1.52$ );  $R = 0.4, |\eta_{Jet}| < 2.8, |\Delta\phi| > \frac{7\pi}{8}$

❖ Isolation cut ( $E < 8 \text{ GeV}$ )  $\Delta R = \sqrt{\Delta\eta^2 + \Delta\phi^2} = 0.3$

## ➤ Deviated from experimental results: May be fixed by using full events

❖ Similar behavior can be seen in the central events

ATLAS  
[PLB 789, 167-190 (2019)]

# $\gamma + 2$ jets

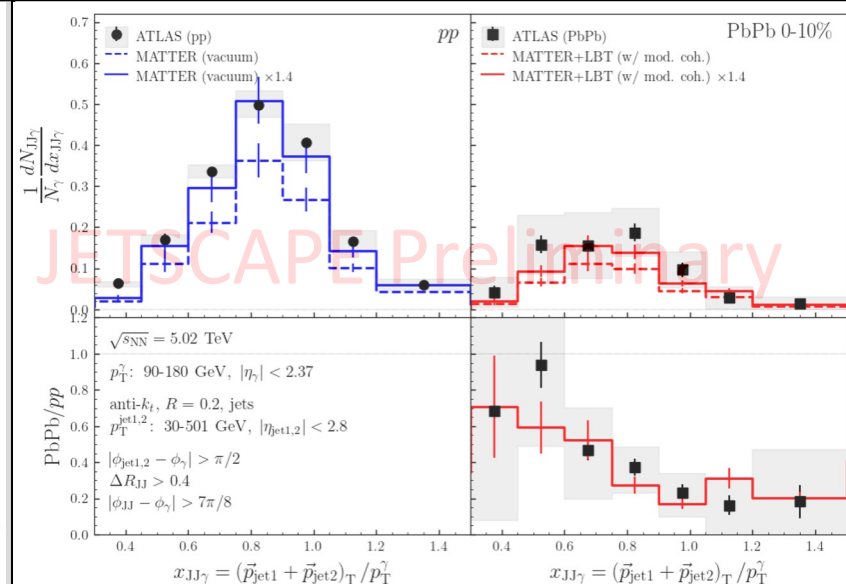

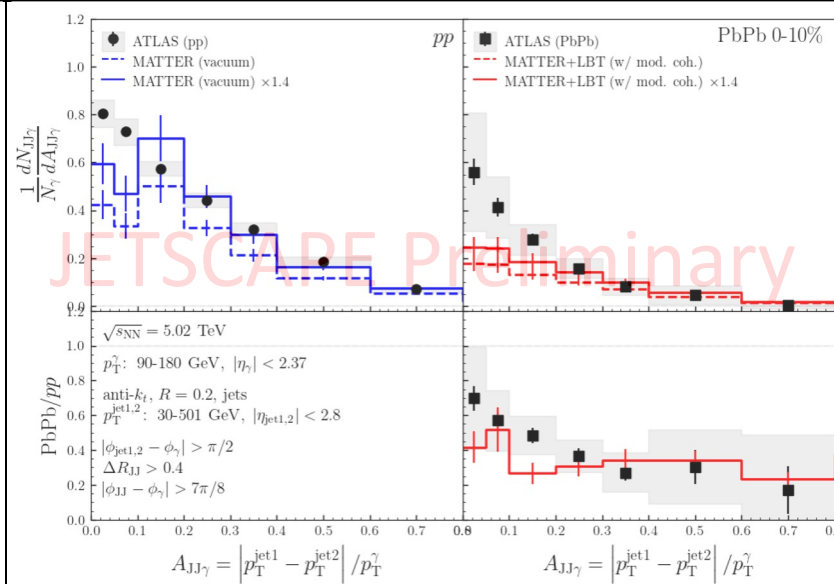

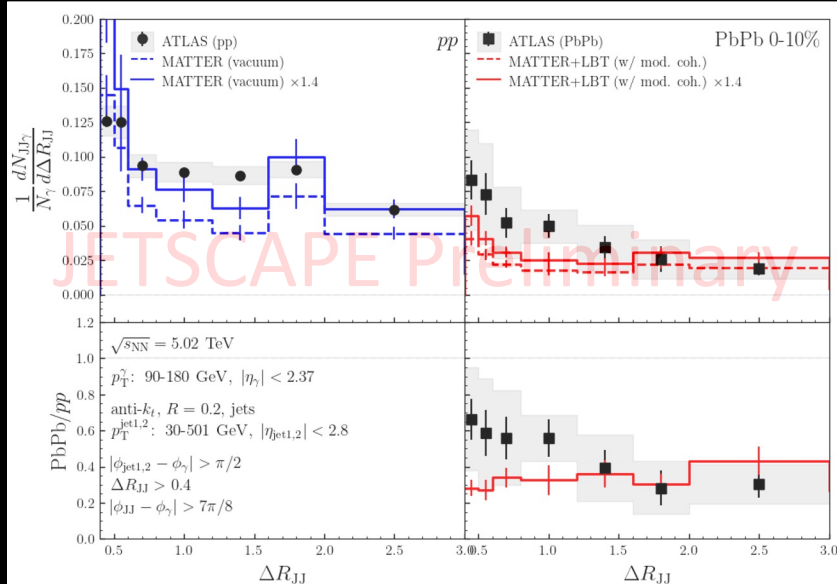

- Same Isolation criteria as  $\gamma$ -triggered single jet analysis
- $PbPb/pp$  ratio for all three observables have good agreement
- Multiplicative factor of 1.4 separately improves Pb-Pb and p-p
- Tension with models (without multiplicative factor)
- Possible role of NLO effects

ATLAS Preliminary  
[ATLAS-CONF-2023-008]

$$x_{JJ\gamma} = (\vec{p}_1 + \vec{p}_2)_T / p_{T,\gamma},$$

$$A_{JJ\gamma} = (p_{T,1} - p_{T,2}) / p_{T,\gamma},$$

$$\Delta R_{JJ} = \sqrt{\Delta\phi_{1,2}^2 + \Delta\eta_{1,2}^2}.$$

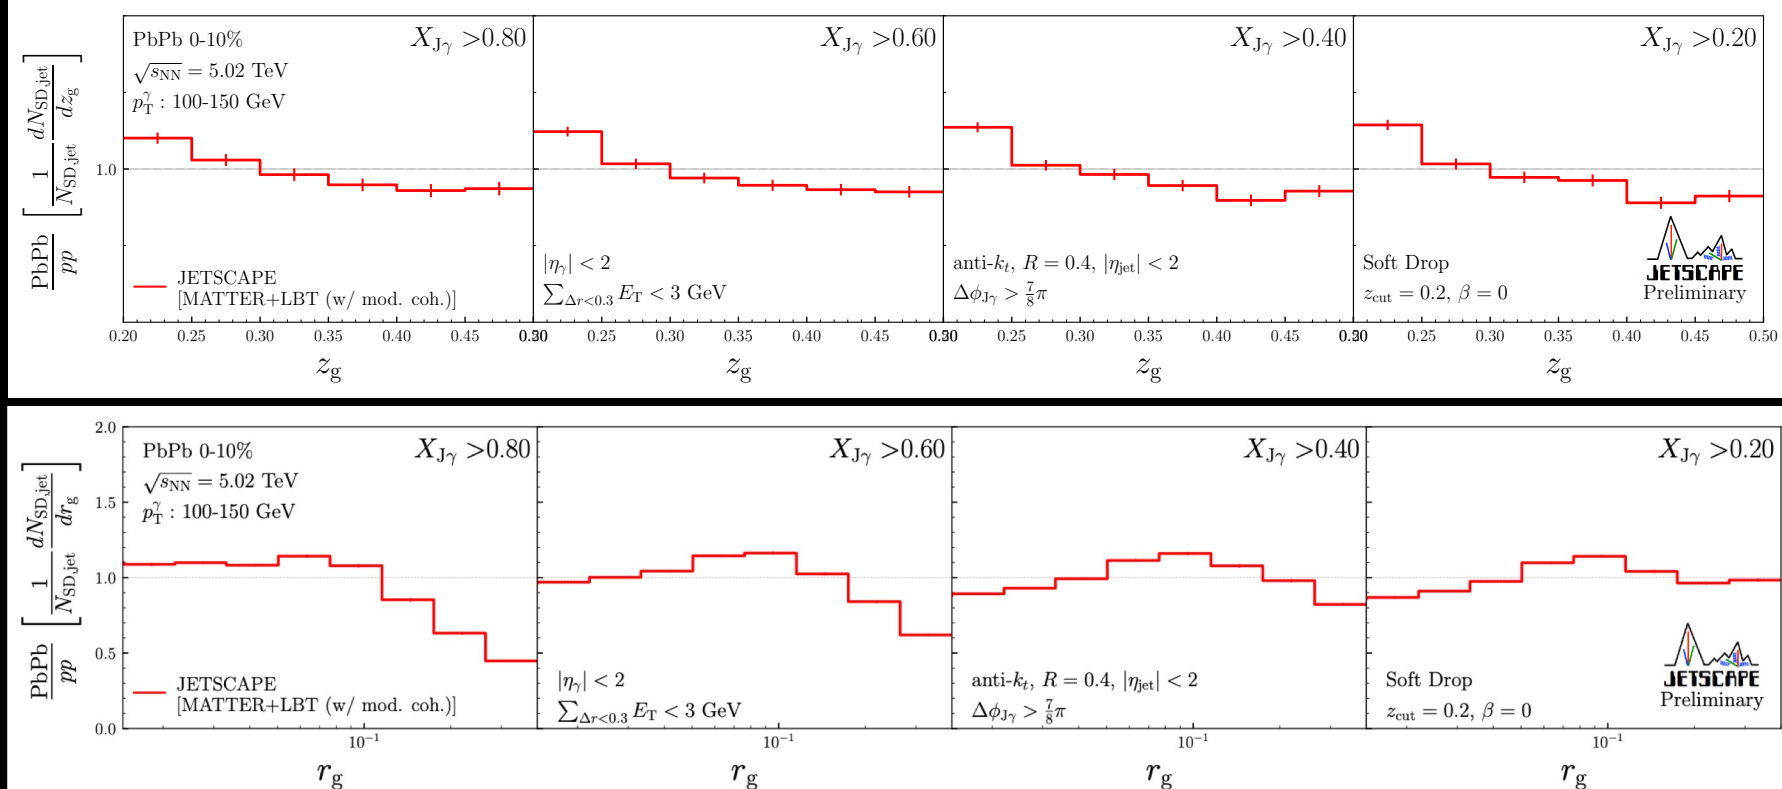

# Groomed Jet Substructure with $\gamma$ -triggered jets

- $z_g$ : energy imbalance of its hardest splitting
- $r_g$ : angular separation of its hardest splitting
- Doesn't show significant dependence on  $X_{J\gamma}$
- Only a slight signal of broadening of the splitting can be seen in  $r_g$

$$z_g = \frac{\min(p_{T,i}, p_{T,j})}{p_{T,i} + p_{T,j}}$$

# Summary and Future Directions

- JETSCAPE framework: General, Modular, Extensive framework uses **Multistage evolution**
  - **Simultaneously** describe most of the observables by using the **same set of parameters** for **different center of mass energies and centralities**
- Photon observables - an independent, parameter free verification of the multistage evolution
- Using the prompt photon events from hard scattering might not be sufficient
  - Prompt photon events are rare: Computer intensive simulation
  - Full events shows a better description of all results with relatively large error bars
  - Isolated Non-prompt photons make considerable contribution
- Further studies needed to understand  $\gamma+2$  jets
- Groomed Jet substructure doesn't show significant dependence to  $X_{J\gamma}$
- Full event analysis for both central and peripheral PbPb events
- Include more physics in our simulations
