

Begrid Quattor Status

3rd Quattor Workshop
12-13/03/07

Stijn.De.Weirdt@cern.ch

BEgrid Status

- UGent stopped using Quattor
 - Severe issues of spma+vserver (no details known)
 - Spma could not install all rpms in one go, had to be retriggered several times
 - Want to get back ;)
- Central services on new hardware, moving to Trac
- Have the intention that anyone can look/use/join the templates, provide us with a DN for access.
- QWG templates are getting better and better and better
 - We are also busy integrating all local differences into default templates

Development interest/Issues

- Glite integration and testing
 - See talk by Shkelzen
- Work on dcache integration
 - New component soon
- Monitoring templates in QWG
 - Lemon/Oracle to start with
 - Something else?
- Solaris support
 - Needs quite some work on All
 - Need to check on what CERN still has
 - (to be used for storage)
