# Managing Xen with Quattor

*Monday, 12 March 2007 14:45 (30 minutes)*

In this talk, I will describe the development of the ncm-xen
component for managing the configuration of Xen virtual
machines. I will cover pypxeboot, a new tool for simulating
PXE booting for guest VMs and describe the functionality of
ncm-xen itself. Feedback welcome!

**Presenter:**   CHILDS, Stephen (Unknown)

**Session Classification:**   Quattor developments (cont)
