

Second MODE Workshop on Differentiable Programming for Experiment Design

Contribution ID: 49

Type: Talk

Normalizing flows for differentiable expectation values

Wednesday, September 14, 2022 9:50 AM (20 minutes)

I will give a short introduction to (conditional) normalizing flows and discuss why they are essential to calculate “manageable” differentiable expectation values of continuous random variables. I will discuss some examples where this might be useful and end the talk with a github-package that combines some state of the art conditional normalizing flows to be used with minimal manual labor.
