

RCS-SIS' collaborations hosting

Wednesday 27 April 2022 09:10 (25 minutes)

The CERN Scientific Information Service (RCS-SIS) participates in and supports multiple collaborations from the Open Science community. Some of these collaborative projects are hosted at CERN and run by the RCS-SIS Tools & Services team. To ensure a smooth development and release experience, the team rely entirely on GitOps principles and practices. All of this is made possible by using Github, Github Workflows & Actions, ArgoCD, Kustomize, Kubernetes and SealedSecrets.
