

The background is a solid green color. In the four corners, there are decorative orange lines that resemble a circuit board or a network diagram. These lines consist of straight segments connected by small circles, creating a stylized, abstract pattern.

Régulation Température PID

TPI O'Donnell David 2022

Sommaire

- Introduction
- Contexte du TPI
- Pourquoi (Utilité)
- Régulation (BO/BF)
- CAO
- DAO
- Programme
- Bilan

Introduction

=== Moi ===

- O'Donnell David
- CFC Automaticien
- 19 yo - Osu !

=== Projet ===

- Système de Chauffage
- Compatibilization
- Test

Contexte du TPI

=== INCLUS ===

- Chauffage de la boîte
- Choix des composants
- Compatibilité du système

=== EXCLUS ===

- Faire un Régulateur

Pourquoi (Utilité)

- TPI Imposé
- Pertinent (Energie)
 - | - lois cantonales
 - ` - rien sans régulation
- Moin de perte d'électricité

Régulation (BO/BF)

== Boucle ouverte ==

Perturbations

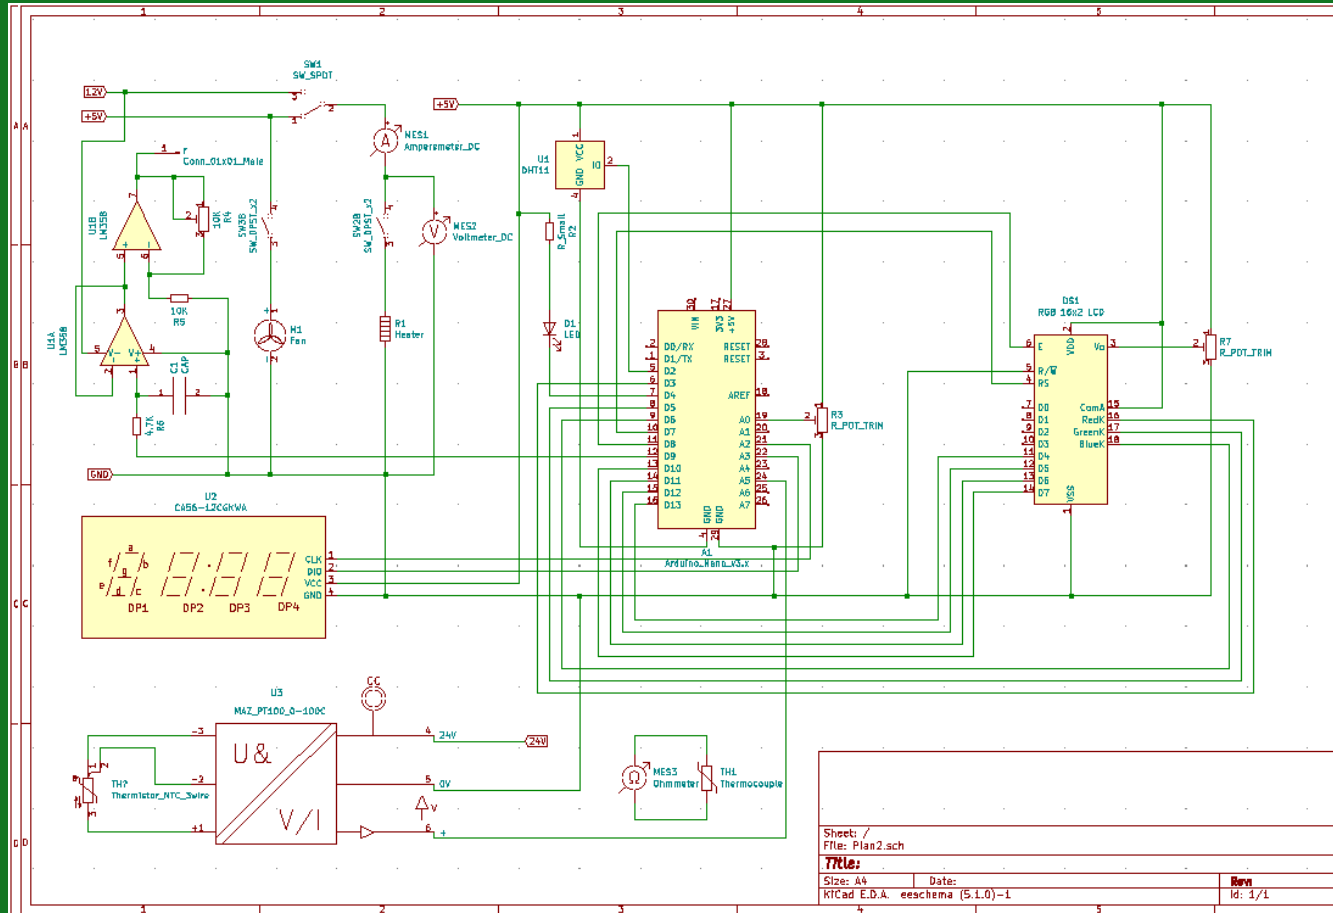

== Boucle fermée ==

CAO

DAO

Sheet: /
File: Plan2.sch
Title:
Size: A4 Date: Rev
KICad E.D.A. eeschema (5.1.0)-1 Id: 1/1

Programme

- Affichage

```
lm35
1 #include <TM1637Display.h>
2
3 // Define the connections pins for 7 segment:
4 const uint8_t CLK_PIN = A2;
5 const uint8_t DIO_PIN = A3;
6 const uint8_t NUM_DIGITS = 4;
7
8 // Create degree Celsius symbol:
9 const uint8_t celsius[] = {
10     SEG_A | SEG_B | SEG_F | SEG_G, // Circle
11     //SEG_A | SEG_D | SEG_E | SEG_F // C
12 };
13
14 // Create display object of type TM1637Display:
15 TM1637Display display = TM1637Display(CLK_PIN, DIO_PIN);
16 const uint8_t DELAY_MICROS = 10000;
17 // Set the display brightness (0-7):
18 display.setBrightness(0);
19 delay(500);
20
21 // Clear the display:
22 display.clear();
23 display.showNumberDecEx((c35 * 10), 0b11100000, false, 3, 0);
24 display.setSegments(celsius, 1, 3);
```

- LM35 (Temperature)

```
3 int Yr = A6;
4 int Y = 9; //to opamp
5 int T = 10; //transistor
6 float lm35 = analogRead(A1);
7 float t35 = lm35 * (1100 / 1024);
8 float c35 = t35 / 10;
9
10 pinMode(Yr, INPUT);
11 pinMode(Y, OUTPUT);
12 pinMode(T, OUTPUT);
13
14 analogReference(INTERNAL);
15
16 float lm35 = analogRead(A1);
17 float t35 = lm35 * (1100 / 1024);
18 float c35 = t35 / 10;
19 opamp = map(lm35, 0, 1100, 0, 255);
20 analogWrite(Y, opamp);
21 val = analogRead(Yr);
22 analogWrite(T, val);
```

Billan

=== Conclusion ===

- Nombreux problèmes de parazitage
- Gestion du temps très important
- Comportement du systeme correspond

=== Améliorations ===

- Utilisation du Atmega 328
- Circuit électronique sur PCB
- Capteur de précision (Pt100)

Remerciments
