Munkatársaink

Csörgő Tamás (MTA Wigner FK és KRF (2015-)), TOTEM tag 2008 óta; TOTEM-Magyarország vezetője, TOTEM Collaboration Board tag, LHC TOTEM Resource Review Board tag, TOTEM upgrade, $d\sigma/dt$ skálaviselkedésének vizsgálata, adatok értelmezése, részvétel az adatok felvételében.

Sziklai János (MTA Wigner FK), TOTEM tag 2008 óta; A TOTEM Detector Control System (DCS) fejlesztése, a DCS remote control system távoli vezérlése a Wigner FK-ból, részvétel az adatok felvételében.

Novák Tamás (KRF), TOTEM tag 2008 óta; TOTEM Detector Control System boxok építése, $p+Pb$ teljes és differenciális hatáskeresztmetszetek méréséhez referencia számítások végzése, részvétel az adatok felvételében.

Lucsányi Dávid (BME és MTA Wigner FK), TOTEM tag 2013-2016 között; BSc és MSc témavezetője Sziklai János, PhD témavezetője Csörgő Tamás, kutatásait ösztöndíj nélkül, egy fél tanéven keresztül folytatta csoportunkban.

Szanyi István (Ungvári Nemzeti Egyetem), TOTEM tag 2018-tól

Nemes Frigyes (ELTE és MTA Wigner FK), TOTEM tag 2009 óta; PhD hallgató, a TOTEM finanszírozásában folyamatosan a CERN-ben, az LHC optika rekonstrukciója, Roman Pot és egyéb upgrade detektorok szimulációja, részvétel az adatok felvételében, a $d\sigma/dt$ adatok értelmezése.

Ster András (MTA Wigner FK), TOTEM tag 2007-2010; TOTEM front-end elektronika programozása, $p+Pb$ adatokhoz $d\sigma/dt$ és σ_{tot} DIPSY Monte Carlo szimulációk és Glauber számítások végzése.

Csanád Máté (ELTE), TOTEM tag 2008 óta; TOTEM adatfelvételi rendszer, adatkiolvasás és az adatformátum fejlesztése, $dN/d\eta$ adatok értelmezése, részvétel a $p+Pb$ adatfelvételben.

Dénes Ervin (MTA Wigner FK), TOTEM tag 2008-2009; a TOTEM DCS fejlesztésében vett részt. Fájdalommal vettük tudomásul, hogy elhunyt 2015. június 10-én.

Odderon: 48 years old scientific puzzle

Odderon: L. Lukaszuk, B. Nicolescu,
Lett. Nuovo Cim. 8, 405 (1973)
Received: 31 July 1973

Odderon is an odd component of
elastic scattering:
Changes sign for crossing

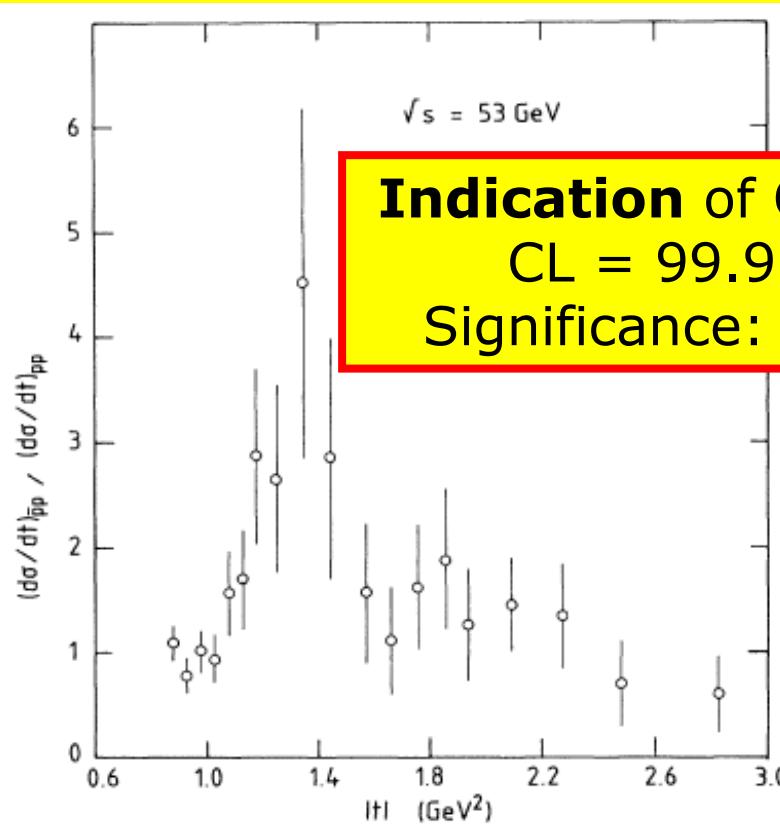

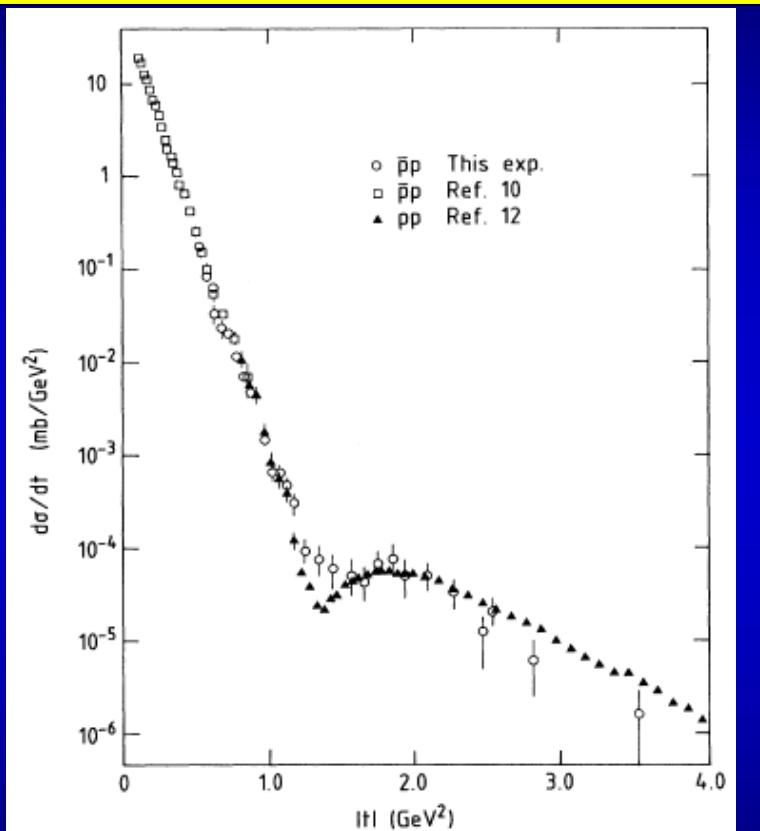

Odderon name coined: D. Joynson, E. Leader, B. Nicolescu, C. Lopez,
Nuovo Cim. 30A, 345 (1975) - Well established in QCD by now !
Honorable mention: A. V. Efremov, R. Peschanski, JINR-E2-6350 (1972)

Odderon: elusive experimentally

Odderon search at ISR: indication but no conclusive result

Breakstone et al, Phys. Rev. Lett. 54, 2180 (**1985**): CL = 99.9 %

Terminology for **this** talk:

Agreement if statistical significance is $< 3 \sigma$

Indication of signal if $3 \sigma \leq \text{significance} < 5 \sigma$

Evidence or observation of signal if $5 \sigma \leq \text{significance}$

Discovery of signal if $5 \sigma \leq \text{significance}$ **for the first time**.

2021 observations of Odderon with $> 5 \sigma$

Evidence of Odderon-exchange from scaling properties of elastic scattering at TeV energies #5

T. Csörgő (Wigner RCP, Budapest and CERN), T. Novák (Unlisted, HU), R. Pasechnik (Lund U., Dept. Theor. Phys.), A. Ster (Wigner RCP, Budapest), J. Szanyi (Wigner RCP, Budapest) (Dec 26, 2019)

Three Oldest Hungarian Universities

UP Story - 650 years

Home » University » UP Story 650 years

University of Pécs: 1367

The history of higher education in Pécs dates back to 1367, when Louis the Great initiated the establishment of a university in the episcopal city of Pecs. As a result of an integration process of several stages, the University of Pécs was founded, which has become one of the most famous, prestigious institutions having a leading role in regional education. It has ten faculties which cover the full spectrum of high-quality higher education.

1367

The University of Debrecen, the oldest institution of higher education in the country operated continuously in the same city, is one of the research universities of national excellence in Hungary offering the widest spectrum of educational programs in 14 faculties and 24 doctoral schools.

University of Debrecen: 1538

Institutions of higher education in the city reach all the way back to the 16th century and the foundation of the Reformed College of Debrecen in 1538. The College played a central role in Hungarian education and culture for centuries. This is the date featured on the symbol of the university as well, the *gerundium*, a tool originally used by the students of the Reformed College to put out fires, showing respect for ancestors and traditions.

(S,C) structure evident,

S: statement, valid if

C: condition is satisfied

See talk of [R. Dardashti](#) at ISMD21

Eötvös Loránd University: 1635

The

predecessor of Eötvös Loránd University (ELTE) was founded in Nagyszombat in 1635 (sixteen thirty-five) by Archbishop of Esztergom, Péter Pázmány, and it is the oldest Hungarian university where the teaching has continued uninterrupted since its inception. More than sixty years

European CORDIS English EN

For most of us, physics terms such as odderon are – and will always remain – firmly lodged in the science fiction realm. Not so for the scientific community, whose determined members spent nearly half a century searching (without much success) for this mythical particle.

Now, a research team including physicists from Hungary and Sweden has discovered the odderon by analysing experimental data from the Large Hadron Collider (LHC) at Switzerland's European Organization for Nuclear Research, better known as CERN. Supported by the EU-funded MorePheno project, the physicists have published a paper describing their findings in the 'The European Physical Journal C'.

Particle physics milestone achieved at CERN

After 50 years of research, physicists have found evidence that the elusive subatomic quasiparticle called odderon actually exists.

3+2 Oldest Hungarian Universities

Why Eszterházy Károly Catholic University (EKCU)?

Eszterházy Károly Catholic University is one of the oldest higher educational institutions in Hungary. Opened in 1774 it has served the Northern Hungarian region for nearly three centuries. Now the university offers potential students the opportunity to work towards their BA, BSc, MA, MSc or doctorate

Eszterházy Károly Catholic University:
1774 (or, 2020?)

History of MATE

With the foundation Hungarian University of Agriculture and Life Sciences (MATE), one of the largest agricultural-focused, multi-disciplinary higher education institutions in Europe was established on 1 February 2021.

With such a long history and legacy of excellence, Hungarian University of Agriculture and Life Sciences stands as a central pillar of higher education in Hungary and throughout the region.

Milestones in the history of MATE:

- 1787 Faculty of Veterinary Medicine founded
- 1880 Ybl Miklós Technical College founded
- 1917 Teacher Training College, Jászberény founded
- 1920 University of Agriculture was founded in Budapest
- 1950 University of Agriculture moved to Gödöllő
- 2000 Szent István University founded
- 2011 institutional integration to 7 faculties
- 2016 integration of 3 faculties (Food Science, Horticultural Science and Landscape Architecture and Urbanism) of Corvinus University of Budapest; and the disintegration of the Faculty of Veterinary Medicine
- 2020 integration of Kaposvár University, Eszterházy University's Károly Róbert Campus (Gyöngyös) and Pannon University's Georgikon Faculty in Keszthely

MATE: 2021 (or, from 1787)

MODEL RESULT BASED ON EPJC 81 (2021) 7, 611

1st property:
Pomeron intercept normal: $\alpha_p(0)-1 = 0.075 \pm 0.001$

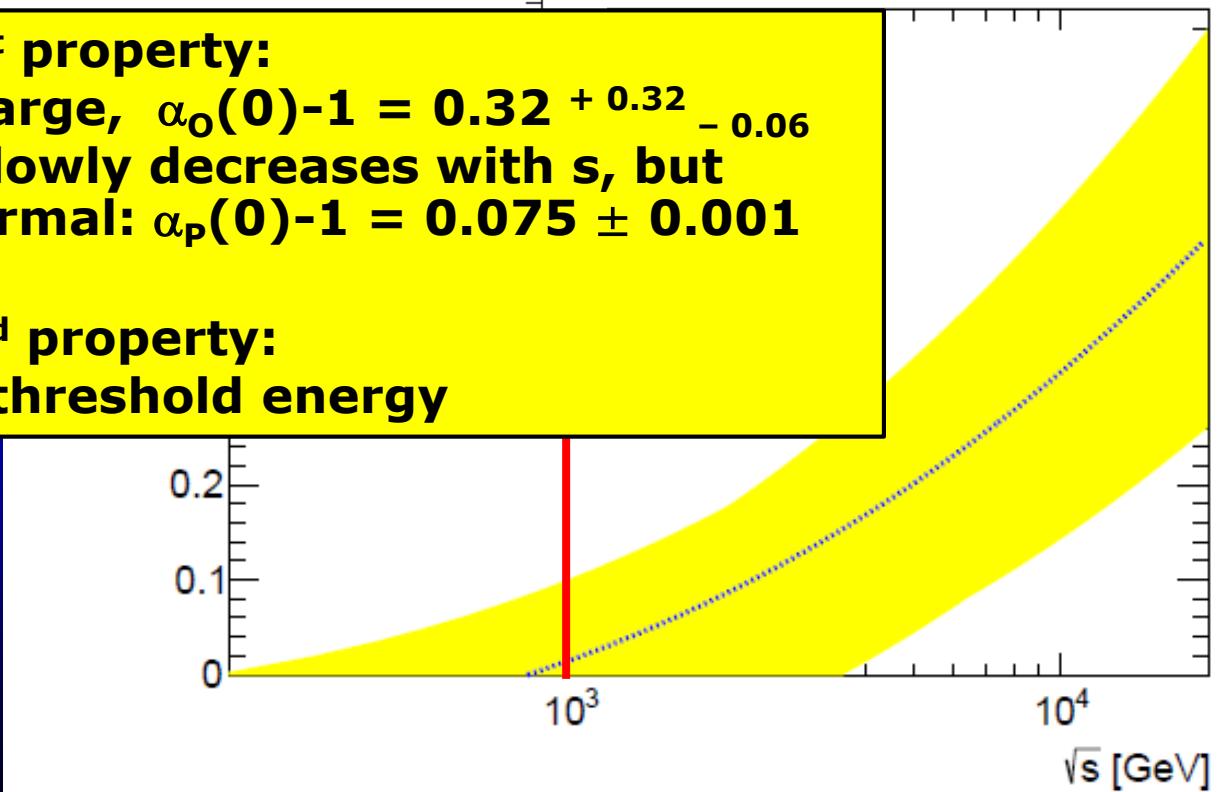

ODDERON PROPERTIES

EPJC 81 (2021) 7, 611

1st property:
Odderon intercept is large, $\alpha_o(0)-1 = 0.32^{+0.32}_{-0.06}$
Threshold effect, slowly decreases with s , but
Pomeron intercept normal: $\alpha_p(0)-1 = 0.075 \pm 0.001$

2nd property:
1 TeV \sim threshold energy

SUMMARY: ODDERON DISCOVERED IN 3 PAPERS, NEW: FOCUS ON ITS PROPERTIES

Bialas-Bzdak $p = (q,d)$ model: certain Odderon effect
statistical significance $\gg 5 \sigma$

Odderon first discovered in three published papers:
three different analysis, each with a statistical significance $> 5 \sigma$

(S,C) structure evident,
Scientific Statement S is valid if Condition C is satisfied

0th property: Odderon exists! (Questioned: where, at 13 TeV and t=0?)

Odderon properties: from Bialas-Bzdak model, so far
valid in a limited s and $-t > 0.37 \text{ GeV}^2$ range only

Odderon intercept is large, $\alpha_o(0)-1 = 0.32^{+0.32}_{-0.06}$
Pomeron intercept normal: $\alpha_p(0)-1 = 0.075 \pm 0.001$

1.96 TeV – 8 TeV:
Threshold effect, just appearing

Ongoing debate: what is the significance of the D0-TOTEM PRL?
Is there any evidence for Odderon at t= 0? Response is coming...

ODE TO ODDERON → OBERON

Ode to Odderon

Let's be truly happy,
for what we've come upon:
We have just discovered
the elusive odderon!

For forty-eight years,
forging a ring of colors white:
Odd number of gluons
has been hiding in plain sight!

*"Discovery consists of seeing what everybody has seen,
and thinking what nobody has thought."*

Albert Szent-Györgyi

OBERON POETRY MAGAZINE

So happy together,
with love for science and research:
Happiness and pleasure
must not slow down the search!

Let's live in harmony,
and in equanimity:
Let's make light of the fight,
gloom is our true enemy!

Odderon: origin of its name

Odderon name coined in 1975:
D. Joynson, E. Leader, B. Nicolescu, C. Lopez
Nuovo Cim. 30A, 345 (1975)

IL NUOVO CIMENTO

VOL. 30 A, N. 3

1 Dicembre 1975

Non-Regge and Hyper-Regge Effects in Pion-Nucleon Charge Exchange Scattering at High Energies.

D. JOYNSON (*), E. LEADER (**) and B. NICOLESCU

*Division de Physique Théorique (**), Institut de Physique Nucléaire (*_{*}) - Paris
Laboratoire de Physique Théorique des Particules Elémentaires - Paris (*_{*})*

C. LOPEZ (*_{*})

*Laboratoire de Physique Théorique et Hautes Energies - Paris (*_{*})*

(ricevuto il 24 Giugno 1975)

Odderon: well established in QCD

Odderon proposed in Regge phenomenology:
L. Lukaszuk, B. Nicolescu, Lett. Nuovo Cim. 8, 405 (1973)

Three Gluon Integral Equation and Odd c Singlet Regge
Singularities in QCD

J. Kwiecinski, M. Praszalowicz, Phys.Lett.B 94 (1980) 413-416

A new Odderon intercept from QCD:
R. A. Janik, J. Wosiek, Phys. Rev. Lett. 82 (1999) 1092

Odderon in QCD:
J. Bartels, L.N. Lipatov, G. P. Vacca: Phys. Lett. B (2000) 178

Odderon in QCD with running coupling:
J. Bartels, C. Contreras, G. P. Vacca, JHEP 04 (2020) 183

Back to Scaling: Model independently

$H(x|pp)$
s-independent:
 $2.76 - 7(8) \text{ TeV}$

$H(x|pp, 7 \text{ TeV}) \neq H(x|pbbar, 1.96)$

Odderon,
IF scaling holds
in pp down to
1.96 TeV

6.26 σ
Odderon effect

Energy range: tested **both** model independently and with modelling.
Modelling is useful, but model independent tests more important!
