TheBureaucrat, a package to help you organize your work

Monday 12 September 2022 15:10 (10 minutes)

In science we deal a lot with data acquisition and analysis. The process until we draw a conclusion is usually very complex, involving the acquisition of several different datasets, and the application of many analysis procedures that in turn create new data. Moreover, we often want to repeat this procedure many times. This creates a lot of information that we have to store and keep well organized, which can be a time consuming and very tedious process that we don't like but, sooner or later, we cannot avoid. In this talk I present *The Bureaucrat*, a simple yet powerful Python package that will help you with this organizational task transparently and easily. And of course, cross platform.
