

## What's new in Python 3.11

*Wednesday 14 September 2022 18:10 (10 minutes)*

Python 3.11 is coming out in October! We will look through the major features you can expect, such as results from the Faster CPython project, enhanced exceptions, new typing functionality, a very nice new asyncio feature, and several exciting enhancements sprinkled throughout the standard library. A couple of major new changes will be rolling in in future versions, as well, like the removal of distutils (3.12) and utf-8 by default (3.15); 3.11 provides some assistance for those, as well.
