Recent quarkonium results at Belle II

Friday 28 October 2022 11:00 (30 minutes)

Belle II offers unique possibilities for the discovery and interpretation of exotic multi-quark combinations to probe the fundamentals of QCD.

This talk presents recent searches for the hidden bottom transition between $Y(10750)$ and χ_{bJ} , as well as other results from an energy scan around 10.75 GeV.
