Heavy baryons in the Chiral Quark Soliton Model

Tuesday 25 October 2022 11:30 (30 minutes)

In this talk we shall summarise present status of the heavy baryon description within the Chiral Quark Soliton model, including exotica. We shall show that ground state parity + and excited parity - states are well described by the model. We shall argue that within the model some excitations are parametrically suppressed, so that the predicted spectrum is less abundant than in other approaches. We shall also argue that new exotic states are in most cases “invisible”.
