3.6M parameters

Challenges

Current hls4ml

Streams of Struct

```
Struct { ap_fixed[N] } data_t
hls::stream<data_t>
```

Synthesize
Large Channel
Layers

Modified hls4ml

Single-value Streams

```
hls::stream<ap_fixed>
```

Channel larger than 64

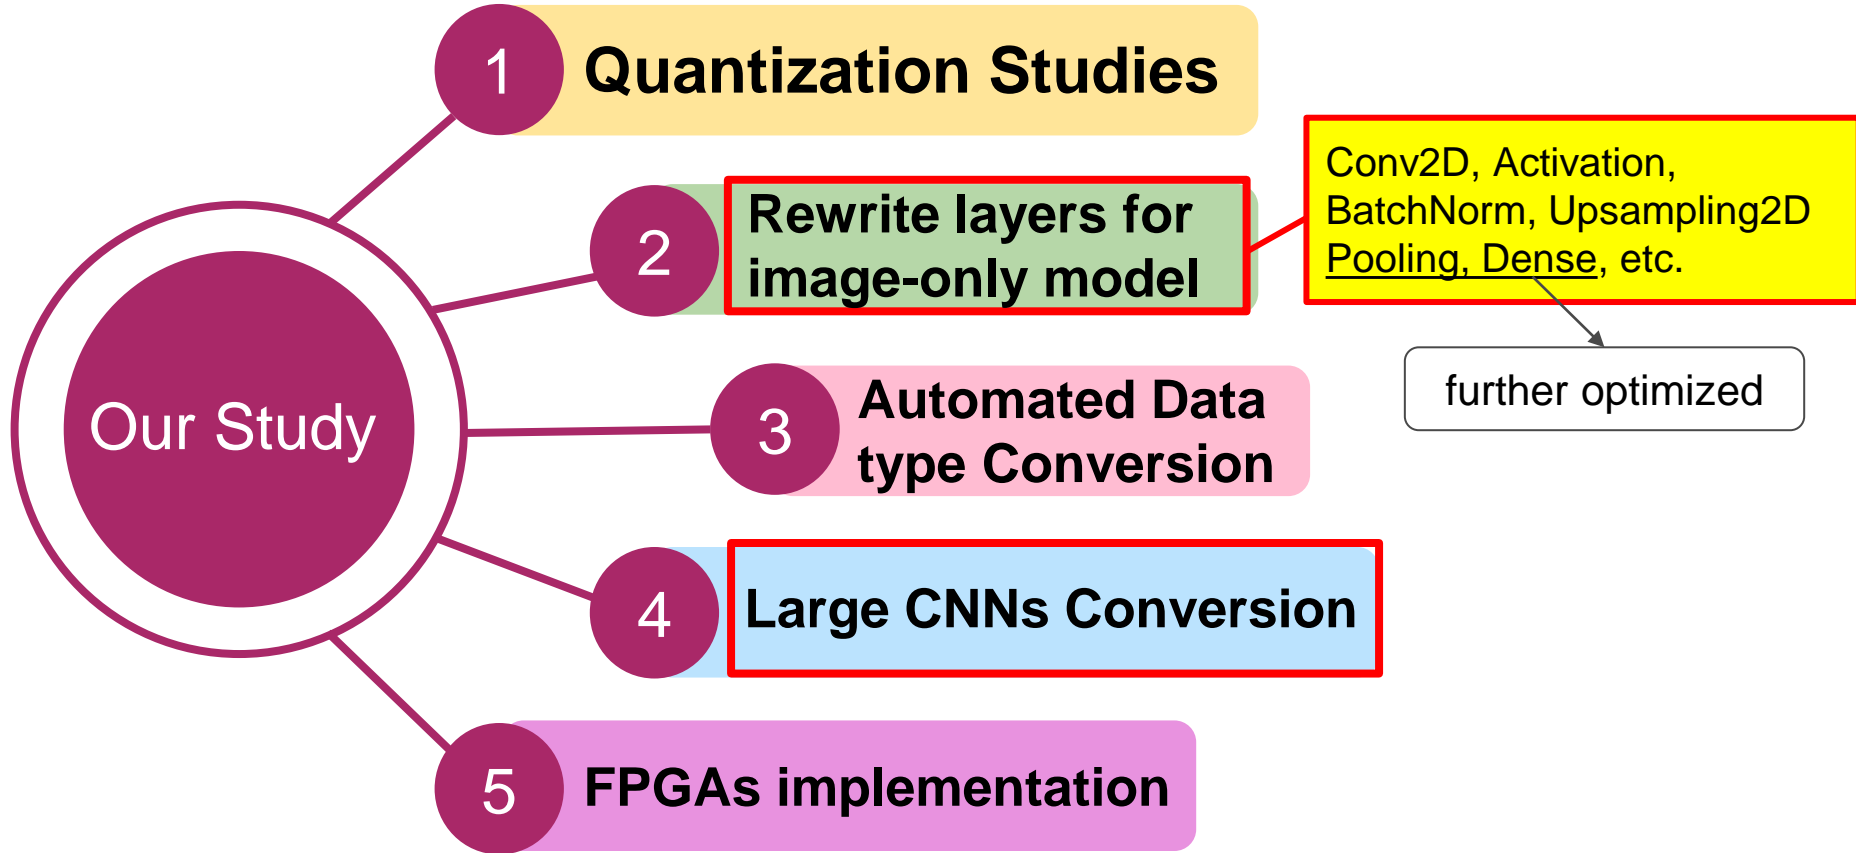

Array of Single-value Streams

```
hls::stream<ap_fixed>[N]
```

Channel less than 64

Design Flow of Our Study

Results from V-Synthesis

- FPGA: Alveo U50
- Model: image-only
With 2 kinds of data types
- Precision: `ap_fixed<16,6>`
- Cycle: 5ns

	hls4ml model (all single)	Resource utilization(%)	hls4ml model (array + single)	Resource utilization(%)
BRAM	662	49.26 %	662	49.26 %
DSP	3,524	59.21 %	3,524	59.21 %
FF	202,011	11.59 %	235,714	13.52 %
LUT	194,744	22.34 %	342,007	39.24 %
URAM	115	17.97 %	115	17.97 %
FPGA time	0.9ms		0.6ms	

Our current progress:

- Expanded the hls4ml library for supporting **automated large CNNs conversion**.
- Applied the design to the **image-only model** and successfully synthesized and tested it on FPGAs.

Next-steps

- Develop tools to convert the full-model and load it on FPGAs.
- Further quantization study for the DeepCalo models.

Thank you for listening!
