

SUSTAINABLE HEP

Sustainable for whom ?

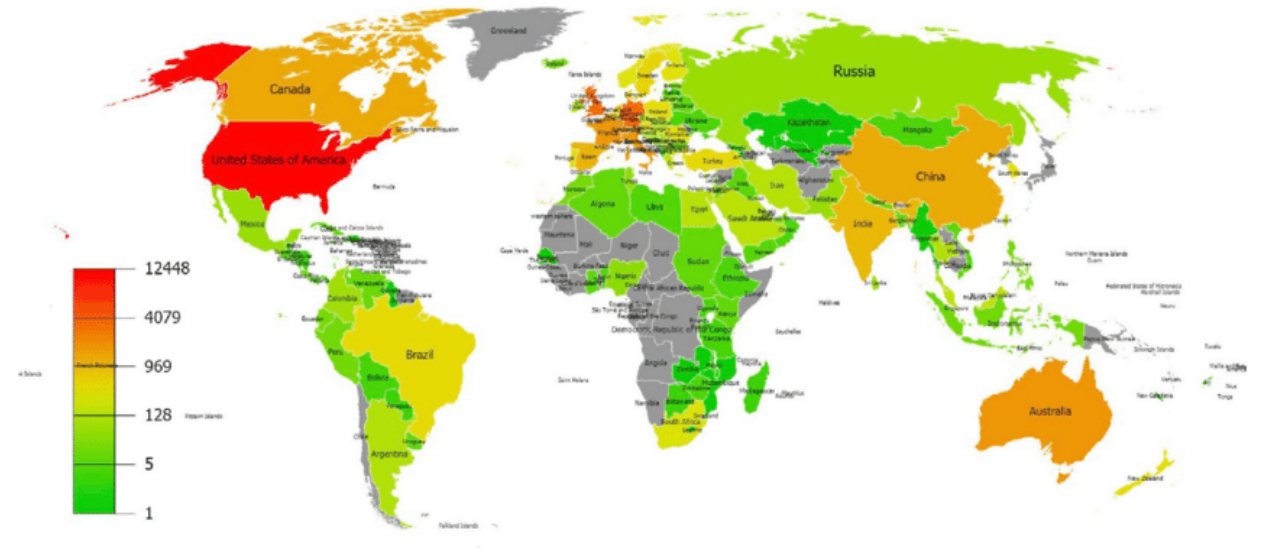

Gabriela Barenboim

Daniel Errandonea

DISCLAIMER

The two problems of the "South" are scientific isolation and a lack of trained manpower

A sustainability plan that focuses on the mobility reduction exclusively (or mainly) will only increase the gap

It might be argued that collaboration can continue, even when mobility is restricted. However, despite advances in computing, collaboration tends to be initiated and sustained through interactions that happen in person.

Limiting mobility is likely to have adverse effects on the scientific system, which is increasingly dependent on international collaboration.

We do not have the solution

Maybe a good compromise would be longer but fewer conferences

But in any case, we need to consider the whole equation when talking about sustainability

Now, we would like to hear your thoughts !
