

Hadron Therapy Control System

Luka Šepetavc & Kristijan Kuhar

With the help of Primož Lavrič & Boštjan Mulej

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101008548

Table of Content

- **Q&A**

About Cosylab

Three areas of Cosylab

- Big Science
- Radiation Therapy
 - **Hadron Therapy Control Systems**
- Medical Devices

300+ people, 9 locations worldwide

- 200+ highly skilled developers and engineers
- 25+ PhD holders from STEM fields

About us

- **Luka Šepetavc**, Senior Systems Engineer & Project Manager
- **Kristijan Kuhar**, Senior Architect & Senior Developer

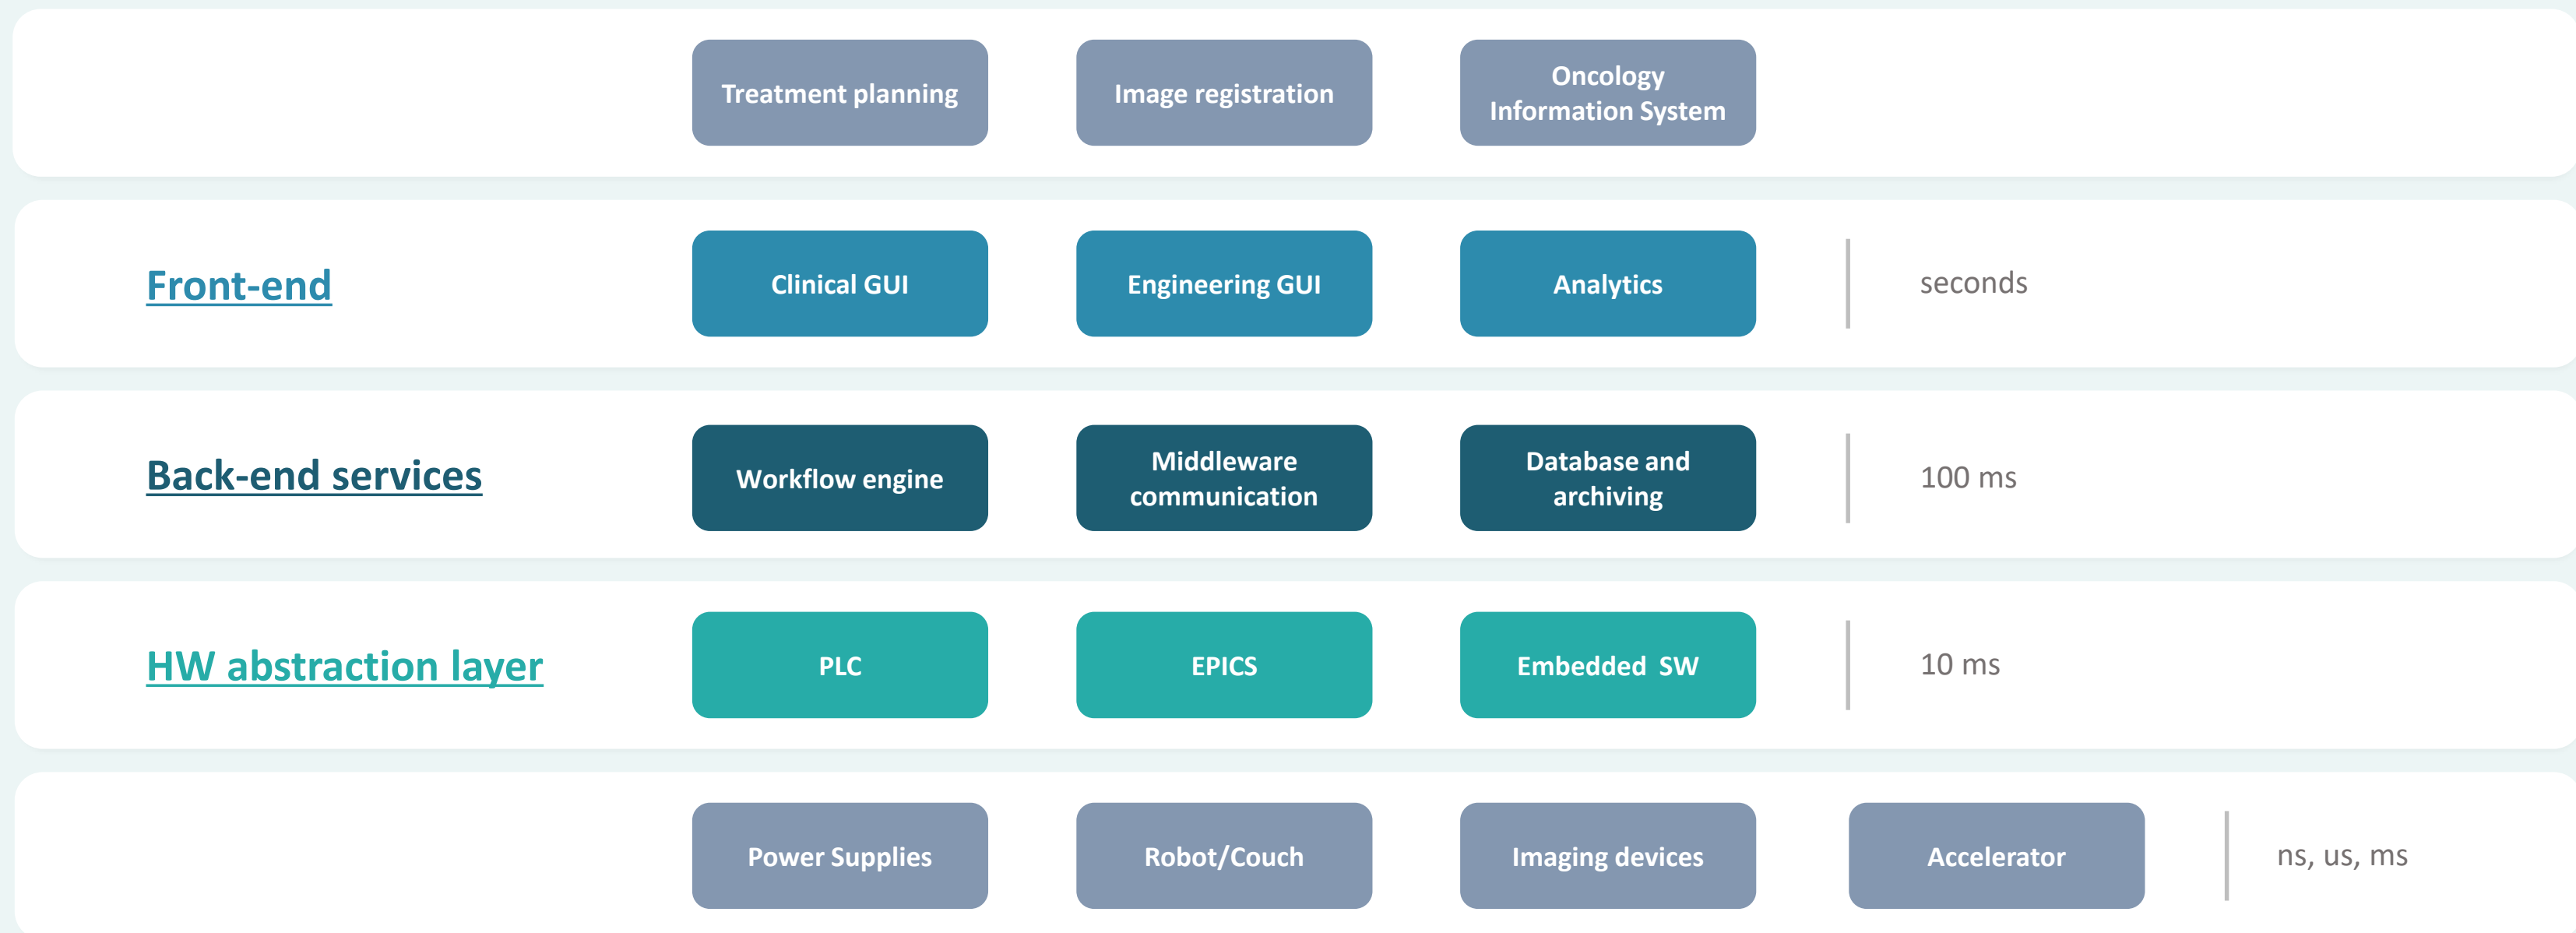

What is Hadron Therapy, What is a Control System?

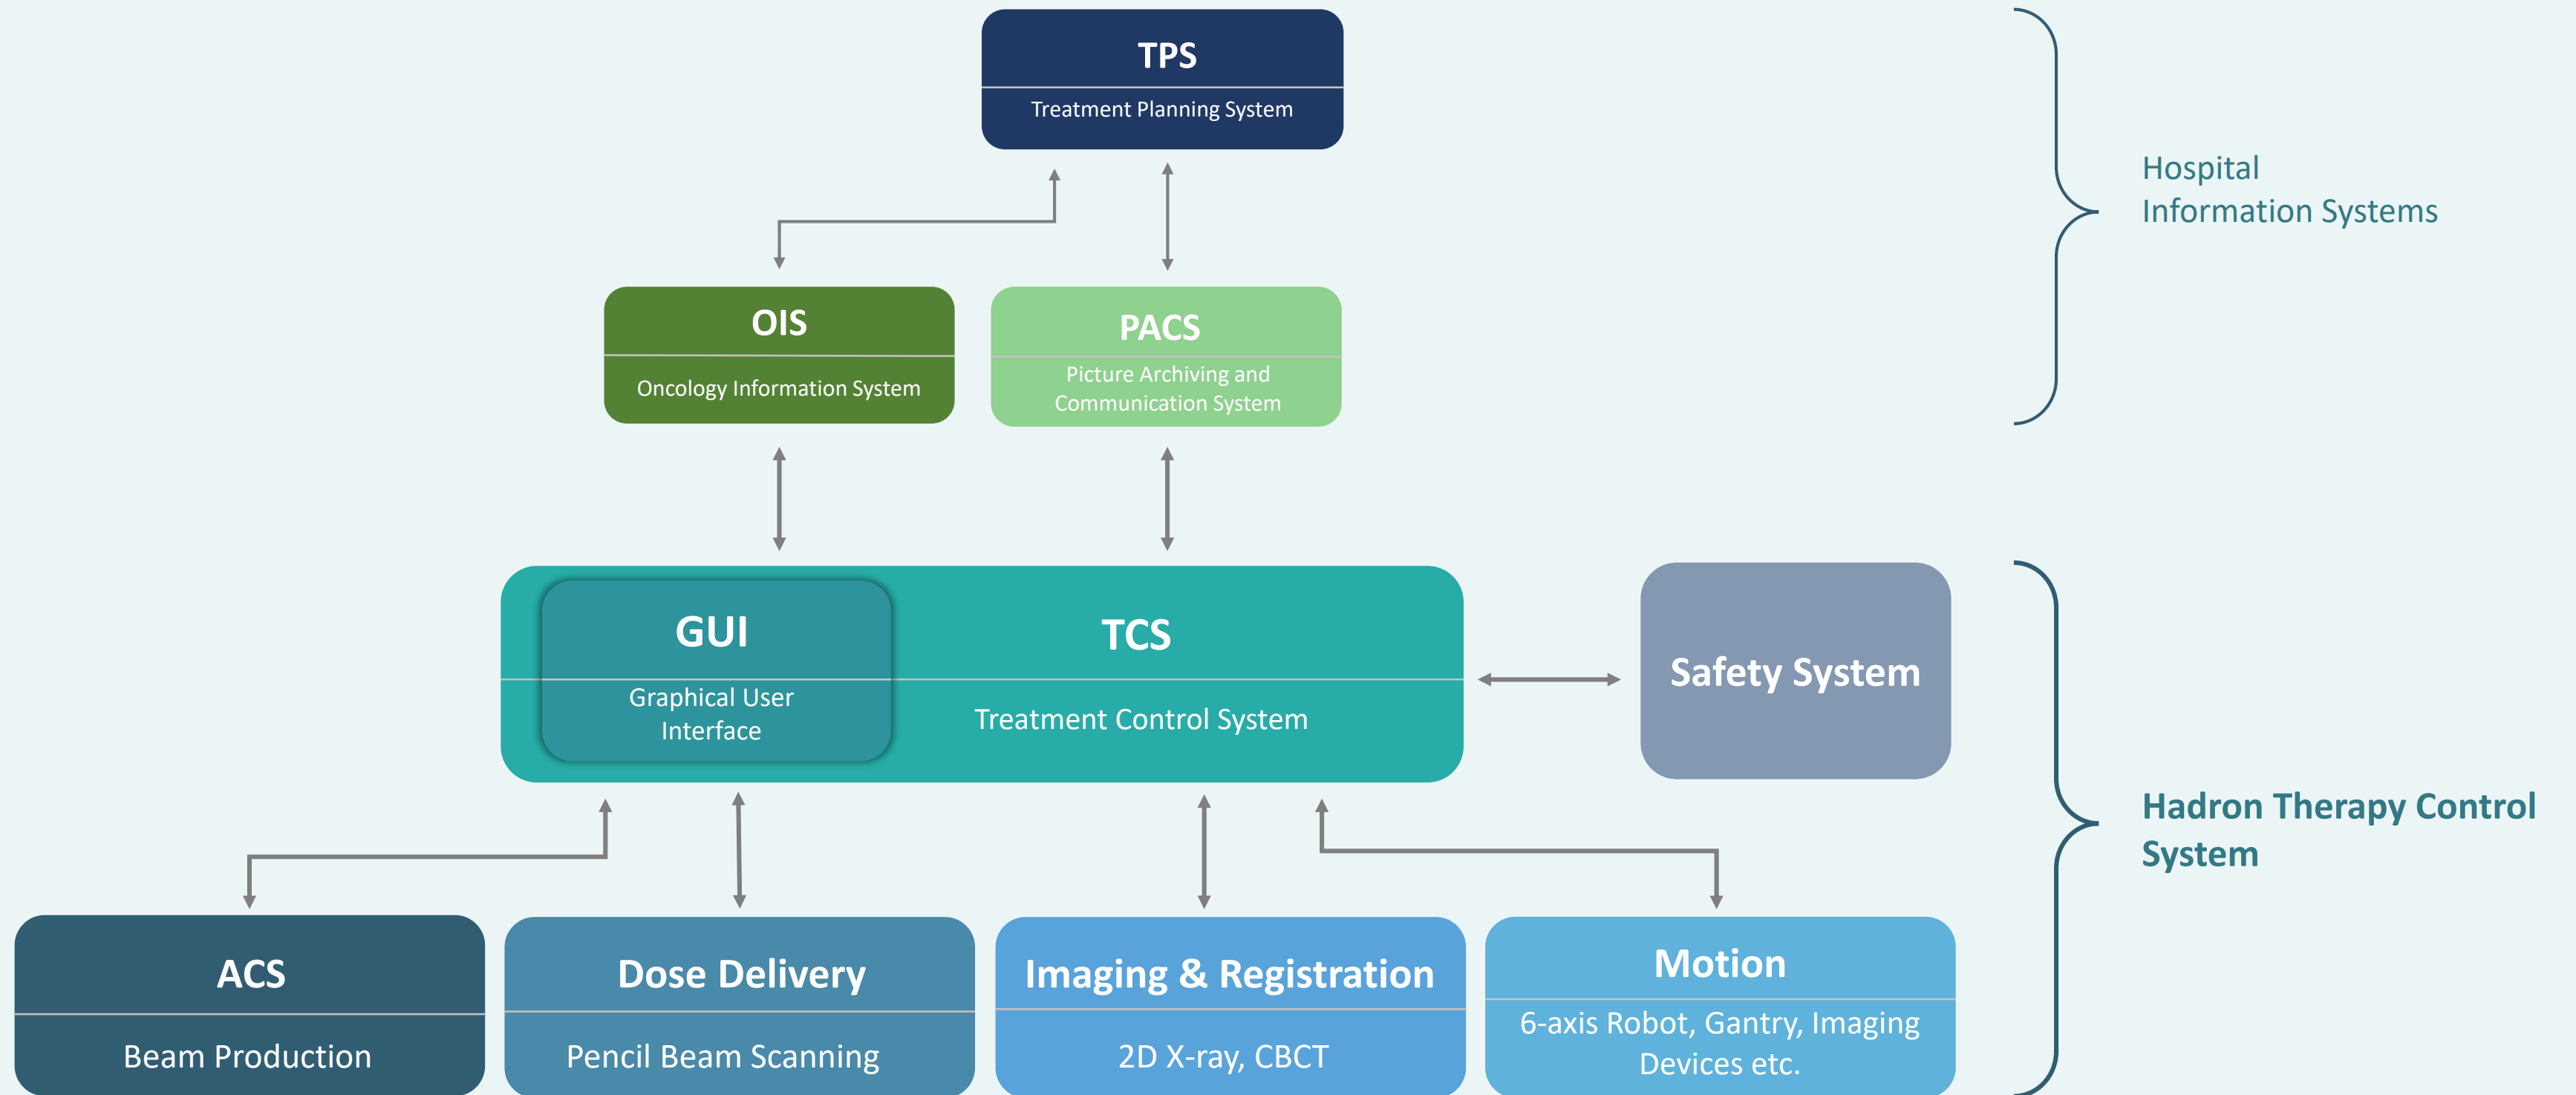

- **Hadron Therapy**
 - Particle therapy: proton, carbon ion
- **Control System**
 - Software which controls devices in a desired way
 - Provides user interface to the operator
- **What is special about Hadron Therapy Control System?**
 - Software must control tens or hundreds of devices
 - Real-time (ns, μ s, ms) and non-real-time requirements
 - Optimize on patient throughput
 - Must be safe
- **What about other radiation therapy systems?**
 - RT - electrons and photons
 - BNCT (Boron Neutron Capture Therapy)

Architecture of a Hadron Therapy Control System

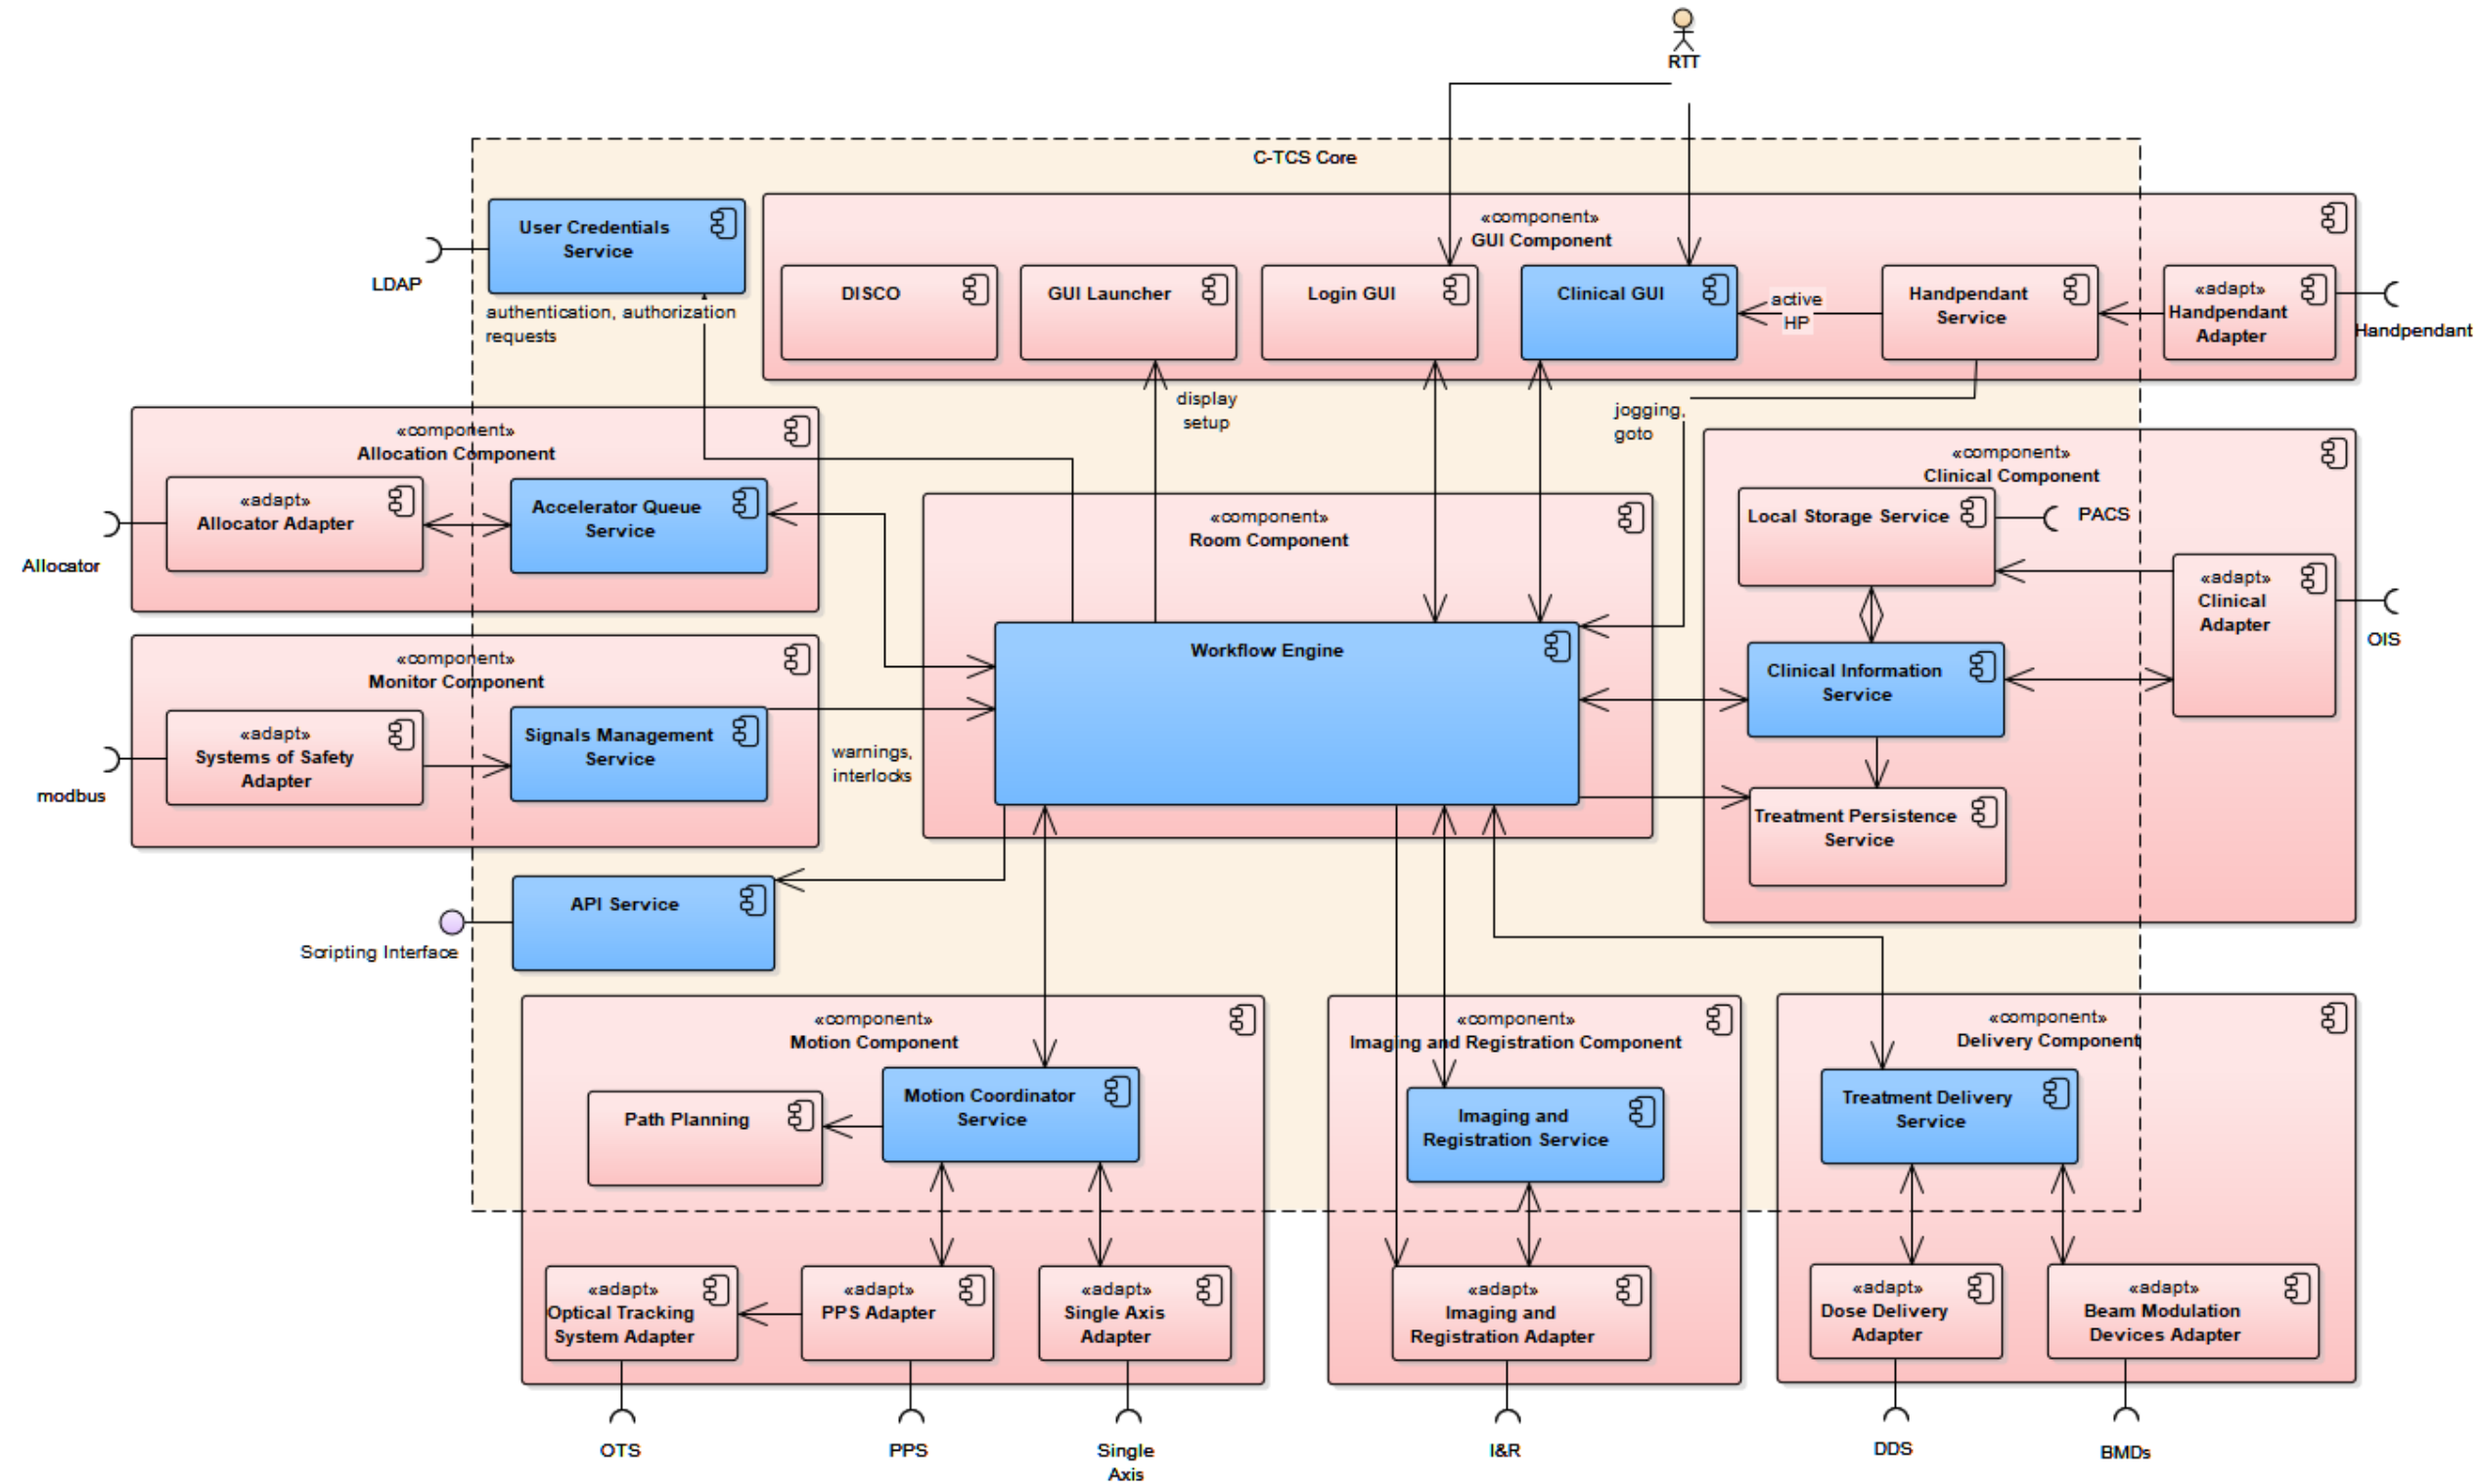

Breakdown of Hadron Therapy Control System

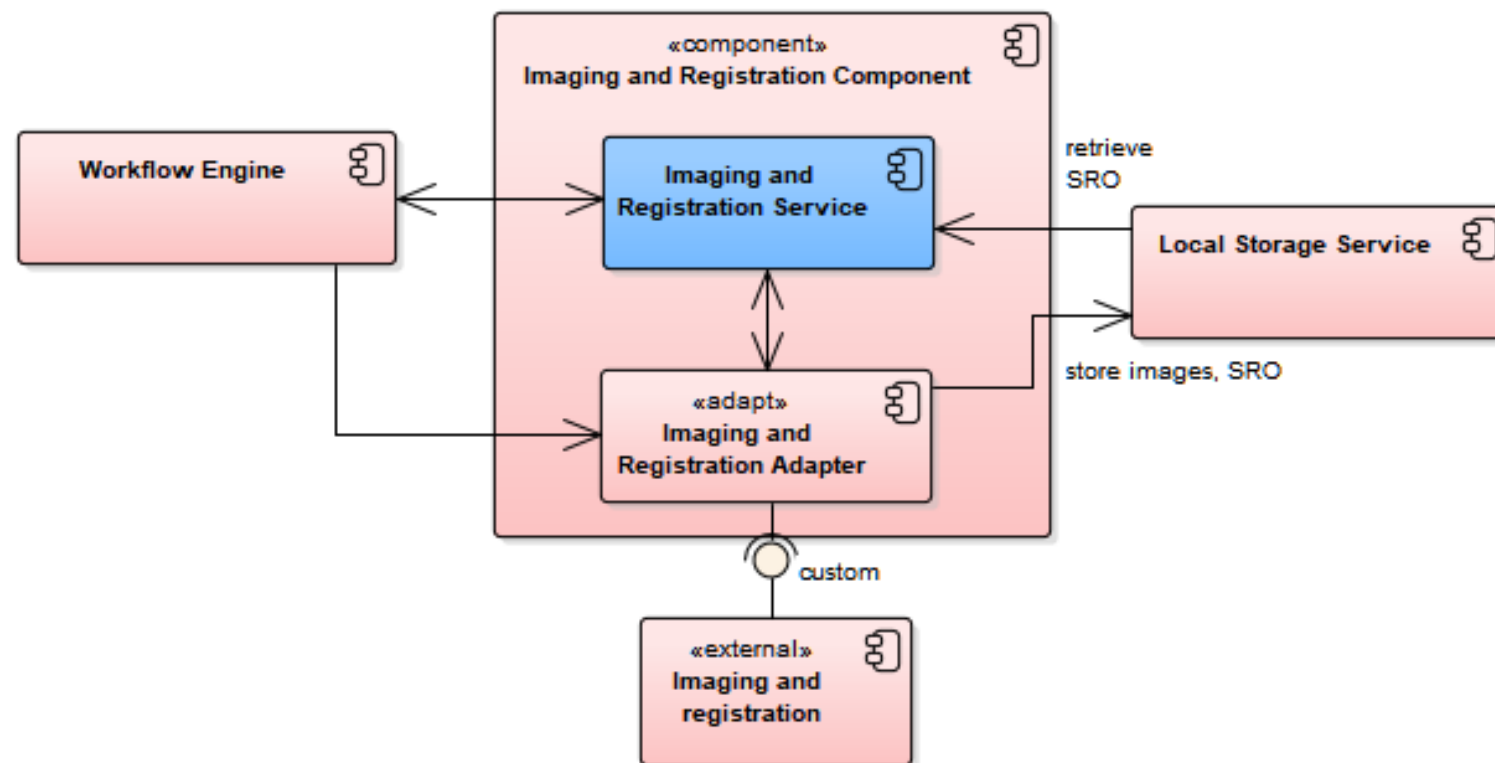

Detailed Architecture 1/4

C-TCS Core

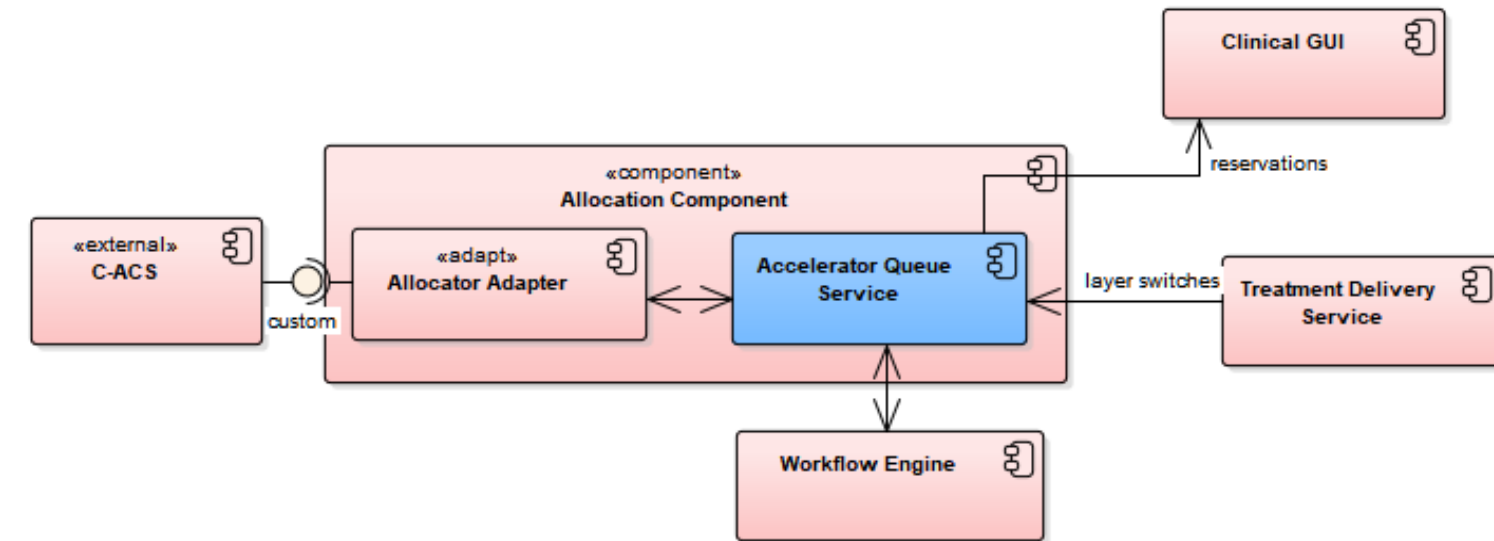

Detailed Architecture 2/4

Imaging and registration Component

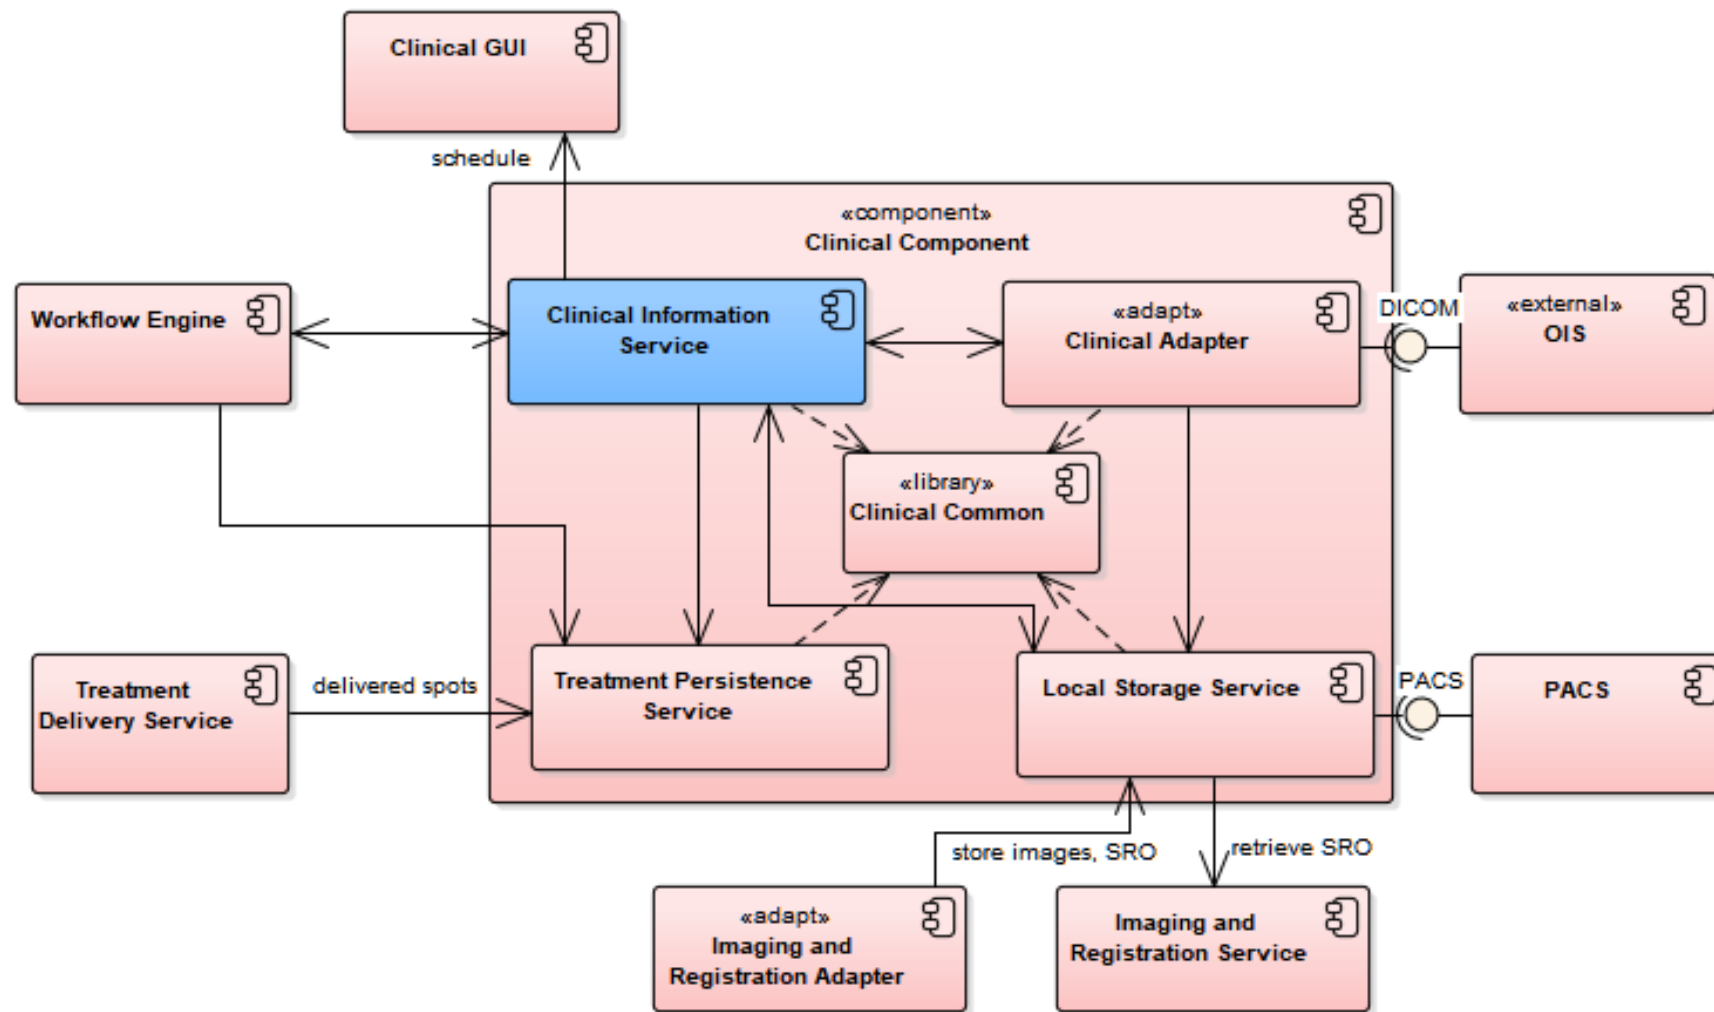

Allocation Component

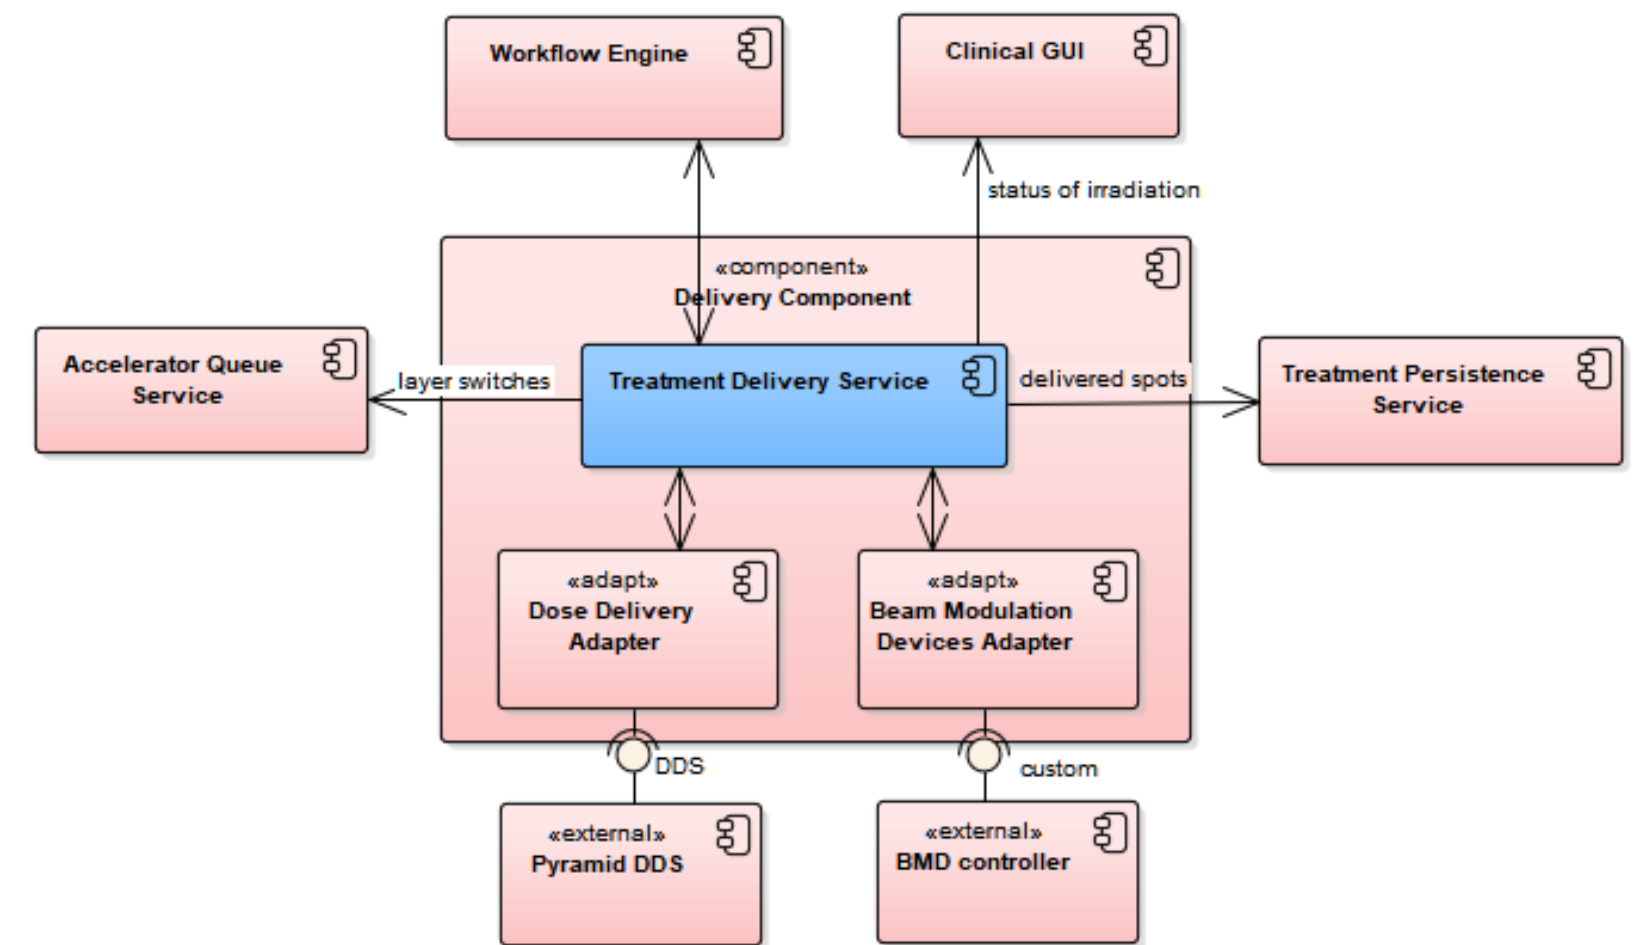

Detailed Architecture 3/4

Clinical Component

Delivery Component

Usage of Simulators

- **Speed up development and testing**

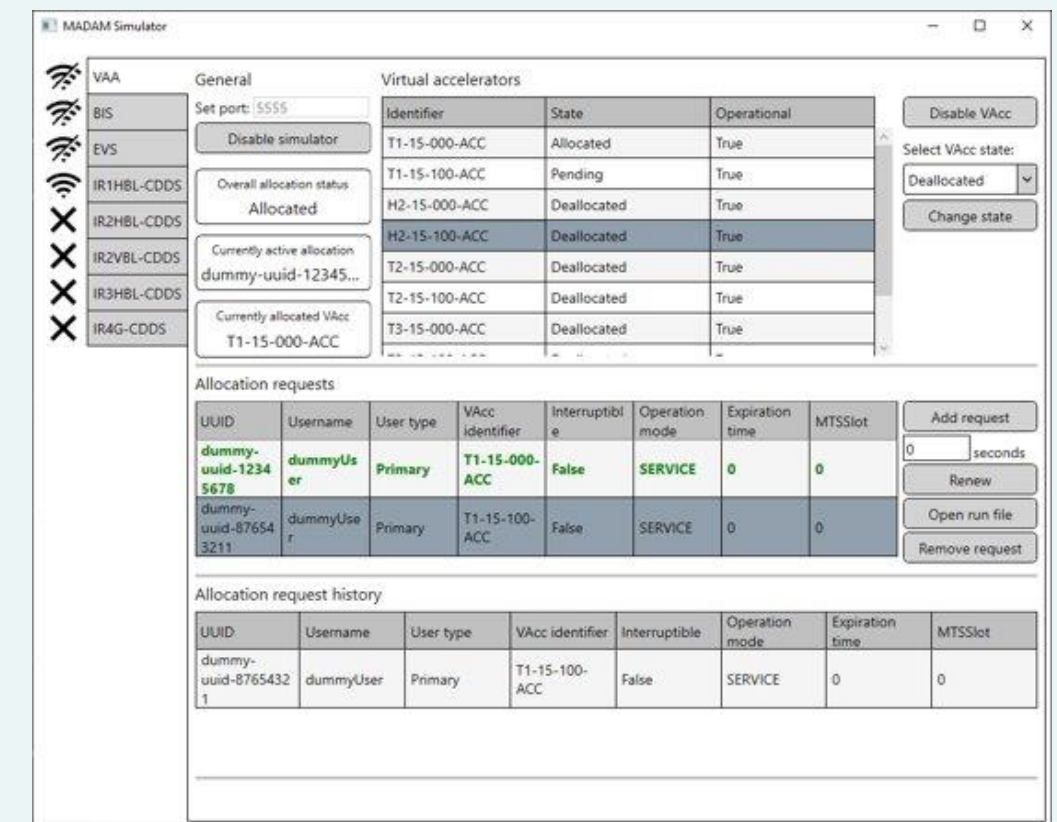

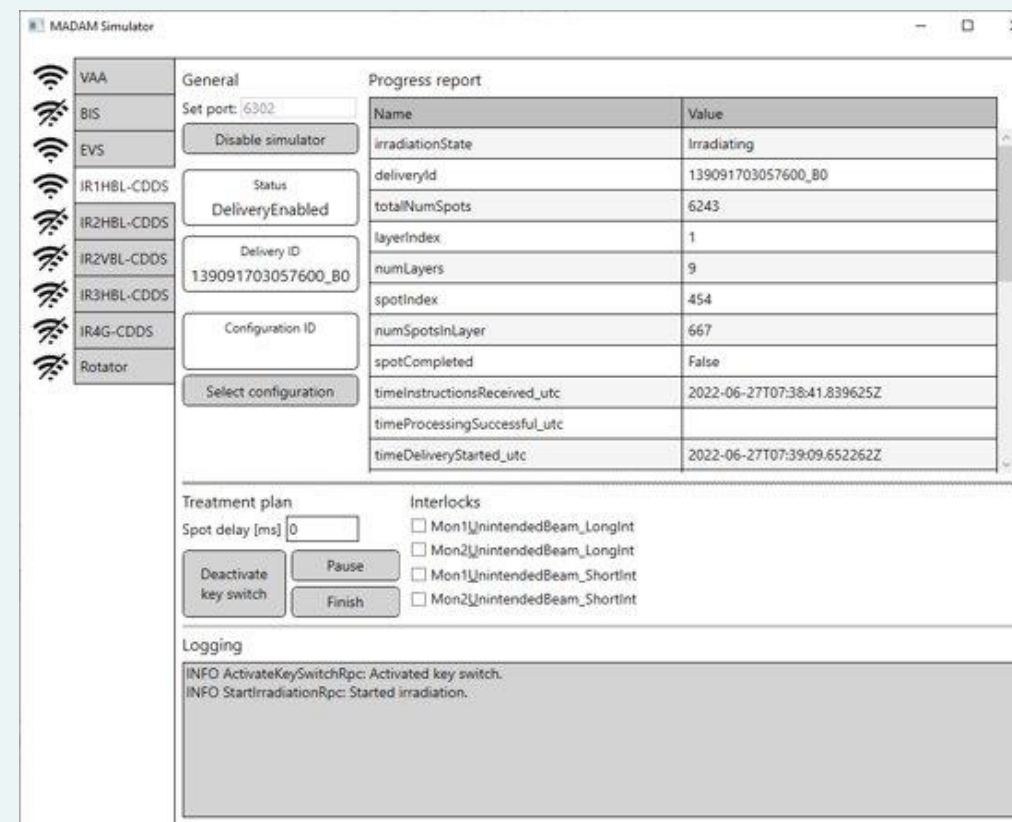

- Automated testing
- Test edge cases and issues that occur rarely
- Replace missing hardware with simulators
- Save time on the real system

- **Types of simulators**

- Programmatic
- With user interface

- **Validation of simulators**

- Formal testing of medical devices

Clinical Workflow Demonstration

Live demo of the Treatment Control System

Presented by Kristijan Kuhar

Technologies Used

- **Good object-oriented design is crucial**
 - Readability, testability, scalability and maintainability.
- **Higher level programming languages on higher tiers (C#, Java, Scala)**
 - High performance is not necessary
 - Faster to develop and less bug prone development
- **Lower lever programming languages on lower tiers (C, VHDL)**
 - Real-time control, quick response times
- **Good logging system is very important**
 - Essential during testing
 - Often it is not feasible to block the execution with a debugger
 - Diagnostics when running in production
- **Execution data collection for workflow optimization (future)**

```
// Allow imaging in IMAGING position when imagingReady
when {

  // Imaging ready, imagingAllowed fills getCurrentlyAllowedImagingTypes
  case s @ State(ss: WithBeam, _, None)
    if params.conditions.get(Cond.imagingReady) && ss.plan.planState.getCurrentlyAllowedImagingTypes.isEmpty() =>
      desc
        // Imaging is allowed
        .onCondition(Cond.imagingAllowed, triggerValue = true, () => {
          val planState = ImmutablePlanState.builder().from(ss.plan.planState)
            .currentlyAllowedImagingTypes(
              if (ss.plan.planData.getInitialImagingTypes.isEmpty()) { // ternary if
                params.config.getImagingTypes
              } else {
                ss.plan.planData.getInitialImagingTypes
              }
            ).build
          newSubstate(s, ss.copyBeam(ss.plan.copy(planState = planState), ss.beamState))
        })
    }

  when {

    // Imaging ready, not imagingAllowed clears getCurrentlyAllowedImagingTypes
    case s @ State(ss: WithBeam, _, None)
      if params.conditions.get(Cond.imagingReady) && !ss.plan.planState.getCurrentlyAllowedImagingTypes.isEmpty() =>
        desc
          // Imaging not allowed
          .onCondition(Cond.imagingAllowed, triggerValue = false, () => {
            val planState = ImmutablePlanState.builder()
              .from(ss.plan.planState)
              .currentlyAllowedImagingTypes(Collections.emptyList())
              .build
            newSubstate(s, ss.copyBeam(ss.plan.copy(planState = planState), ss.beamState))
          })
    }
  }
}
```

Development Lifecycle

- **Software for the most complex medical device in the world**
- **Carefully follow development processes**
 - Requirements
 - Architecture & Design
 - Implementation & Integration
 - Verification & Validation
 - Risk Management
 - Usability
- **Regulatory & standards**
 - EU, USA, China, Japan...

Team & Time to Develop

- **Big Teams**
 - Product development: 10-40 people
 - Integration: 5-10 people
- **Different Roles Involved**
 - Systems Engineer
 - Architect
 - Developer
 - Tester
 - Project Manager
- **Multi-Year Projects**
 - Product development: ~4 years
 - Integration: 1-2 years

Thank you!

Q & A
