

Hey! I'm Abbey, and I've just finished the third year of her MPhys Physics degree at Lancaster University and am from the UK. For my Master's project I'm investigating tau neutrinos at the DUNE experiment at Fermilab and am pursuing a PhD in the same area. I've previously completed projects at Oxford University and AstraZeneca and have a passion for outreach and engagement. At CERN, I'm working on the ATLAS experiment testing pixel modules for the upgrade of the ATLAS Inner Tracker.
