

A Brief Autobiography

Dođa Elitez

I am a master's student in Physics at the Johannes Gutenberg University of Mainz. I wrote my bachelor thesis in 2020, June on "Investigation of $t\bar{t}(b\bar{b})$ Events with Very High Higgs Boson at ATLAS Detector" and since then I continue working on this topic as a student assistant. Besides I work at Mainz Microtron (MAMI) as a helping operator for the beam operation and control.

At CERN I am part of the EP-ADP-OS group under supervision of Paul Gessinger-Befurt and Andreas Salzburger. My main task is to develop an ACTS (A Common Tracking Software) example with Gaudi toolkit.
