

Hello, my name is Selim Zoorob, I am from the United States. I currently reside in California and have recently graduated from UC Riverside with a bachelor's (BS) degree in physics with a concentration in biophysics.

During my time at CERN, I had the opportunity to work with the amazing team that is VITO at ISOLDE, where I worked on the setup of the ZULF-RD-NMR project and have assisted the team during beam-time in the liquid beta-NMR studies of the interaction of Na and K cations with DNA G-quadruplex structures.

I have enjoyed working with the group as everyone is passionate and knowledgeable about their respective fields in physics. My favourite moments would be the lunch times that we had together as we got to know each other.

There is a long list of people I would like to thank for allowing me to realize my lifelong dream of interning at CERN, but I would like to specially thank the NSF (National Science Foundation), Dr. Philip Rubin from GMU and CERN for making this internship possible; and Dr. Magdalena Kowalska for hosting me in the VITO group.
