

My name is Samuel Zahorec. I come from Slovakia and next year I am finishing my master's degree at the Institute of Particle and Nuclear Physics at the Charles University in Prague. As a Summer Student I got an opportunity to work on FASER experiment. It is an amazing experience since FASER was installed only back in 2021 and everyone is very excited about collecting the very first data from LHC Run 3.

In past I experienced a Summer Student programme in DESY where I worked on the ITk detector for ATLAS collaboration. For the past few years I was also getting in touch with the new and very fastly evolving field of Quantum Computing.
