

Amir Gruber, 26 (27 next week), from Tel Aviv, Israel. I'm a Physics and Computer Science double major undergraduate student, and (hopefully) I'll graduate sometime during 2023. For the past year I've been a member of the Tel Aviv University neutrino physics group, led by Dr Adi Ashkenazi, where I've done work on Fermilab's MicroBooNE experiment. Currently working as a summer student for CERN's neutrino platform.
