

Hello to everyone.

My name is Omsap Jaroonrak, and I'm a summer student in 2022. I'm originally from Thailand. In June, I received my Bachelor of Science in physics from Suranaree University of Technology. This summer, I have been working in the EP-CMG-OS department's The Compact Muon Solenoid (CMS) group. Cecile Caillol and Andrea Marini have been supervising my work on constraining light quark Yukawa couplings from WH charge asymmetry. Following this summer program at CERN, I intend to begin applying for a Ph.D. in physics and, hopefully, await good news.

So far, I've really enjoyed working with people who are passionate about their work and being able to participate in CERN's diverse community.
