

My name is Razvan-Nicolae Virtan. I am coming from Hunedoara, Romania, and I will finish my bachelor's in computer science next year, at University Politehnica of Bucharest. During my university years, I enjoyed contributing to open-source projects, Unikraft being the most important one. This year I have also started teaching operating systems usage and assembly languages labs.

The reason for joining CERN in my case was the desire to combine computer science skills with an older passion for physics. Right now, I am working in the SFT group, trying to profile CERN-VM FS (the subject of my presentation).
