## Professional Development Programs in Physics in Tuscany

*Monday 26 August 2024 13:00 (20 minutes)*

Since 2000 we have been engaged in professional development programmes to improve the cultural knowledge and skills of pre-service and in-service teachers. All activities focus on promoting active learning in laboratories. After testing different training modalities for in-service teachers, in recent years a series of national summer school has been organised to explore a single general topic from an interdisciplinary point of view. In addition, in collaboration with an interdisciplinary inter-university team, we have developed and tested a training course for tutors for newly recruited teachers in Tuscany, with the aim of promoting the acquisition of professional skills.

### How would you like to present your contribution?

Live in Kraków (time slot to be allotted based on the programme)

### Target education level

Secondary

### Category

Informal Education
