The Training Needs of Physics Teachers: a Challenge from the Association for Physics Teaching

Tuesday 27 August 2024 11:10 (20 minutes)

A comparison is presented between the training needs expressed by a significant number of physics teachers (about a thousand) and the perception of the effectiveness of the various Association for Physics Teaching (Associazione per l'Insegnamento della Fisica, AIF) in-service training initiatives on AIF's members. The analysis presents ideas on which initiatives are most effective and how to propose training activities that satisfy the real training needs of in-service teachers. The AIF's commitment to promoting innovative and effective teaching methods in the most diverse contexts favoured discussion in the conference between different stakeholders interested in a widespread improvement in physics teaching.

How would you like to present your contribution?

Hybrid from my own country (early in the conference day, best for Asia, Australia)

Target education level

Secondary

Category

Formal Education

Author: MONTALBANO, Vera (University of Siena)

Presenter: MONTALBANO, Vera (University of Siena)

Session Classification: Oral presentations

Track Classification: Physics Teacher Education and Professional Learning
