Low-scale leptogenesis with flavour and CP symmetries

Tuesday 1 November 2022 16:05 (20 minutes)

We consider a type-I seesaw framework with a flavour symmetry from the series of non-abelian groups $\Delta(3n^2)$ and $\Delta(6n^2)$ and a CP symmetry and study the impact of these symmetries on the predictions for neutrino oscillation data, for low-scale leptogenesis and the testability prospects of the model. Based on 2203.08538 and some upcoming work.

Authors: HAGEDORN, Claudia (INFN, Section of Padua); KLARIC, Juraj (Universite Catholique de Louvain (UCL) (BE)); DREWES, Marco (Universite Catholique de Louvain (UCL) (BE)); GEORIS, Yannis

Presenter: GEORIS, Yannis

Session Classification: Heavy neutral leptons
