

MICE Magnetic measurements

We made the request that the magnetic measurements MICE wide be performed by the CERN group. They made an estimate of 60 kCHF for manpower and construction of device and travel during the conception phase.

UNIGE made a request to the Swiss admin to cover this (FORCE) and this was accepted.

CERN has officially recognized/approved the project

The 60 kCHF will run out at some point and 'exploitation travel' will need to be covered.

- I will make a further request in one year.
- we will arrange a request to EUCARD TNA (for measts in the Hall) in July 2011

If these do not work out I would propose that

- travel to construction place (LBNL, TESLA) be covered by institute in charge of magnet (LBNL, MICE-UK)
- travel to measurements in MICE Hall be covered by MICE-CF
