

## In pursuit of determining the Bs mixing phase betas

*Tuesday 12 April 2011 11:25 (25 minutes)*

I discuss the possibility of determining the Bs-Bsbar mixing phase from nonleptonic Bs decays to a charmonium state and a light meson, induced by the  $b \rightarrow c \bar{c} s$  transition.

In particular, I consider the mode  $B_s \rightarrow J/\psi f_0(980)$ .
