

# Restic Interface to CTA

\* [work done by AARNET](#)

These file systems support other, like POSIX compliant, access methods less relevant for CTA

# Approach with MinIO S3

- Same benefits of CEPH S3 approach, plus:
  - No need of major code development
  - Leverages on CTA/EOS integration work (injection/callbacks/tape-bit, etc ...). This is a big chunk of work.
  - Leverages on EOS disk buffer cache as we run it today
  - Synergies with AARNET, they run it
