REDUCING THE ELECTRICAL POWER CONSUMPTION OF SCIENTIFIC SOFTWARE DOMENICO GIORDANO, <u>STEFAN ROISER</u>, ANDREA VALASSI — IT-GOV 20 SEP 2022. HEPSCORE WORKSHOP

- Data centres are significant consumers of electricity
 - Power consumption for data centres is expected to rise further

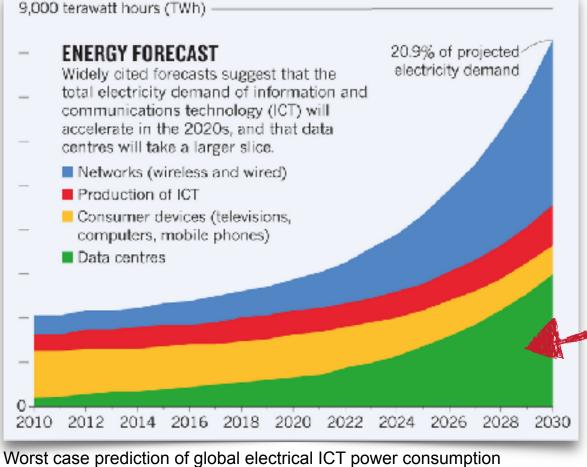

Electricity prices are currently going through the roof

- HEP and other sciences are main consumers of publicly funded distributed computing infrastructures
 - E.g. LHC data processing on 1.4 million compute cores
 - For HL-LHC a x10 of data will be collected and processed

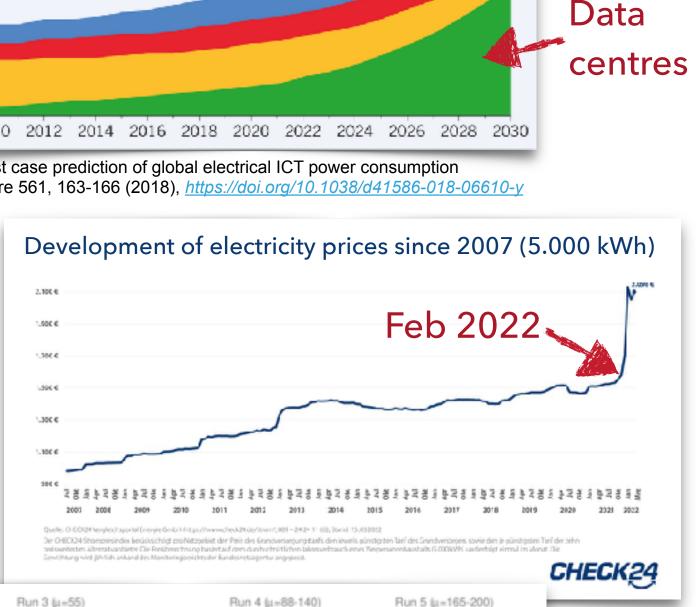

[MHS06years]

Annual C

Nature 561, 163-166 (2018), https://doi.org/10.1038/d41586-018-06610-y

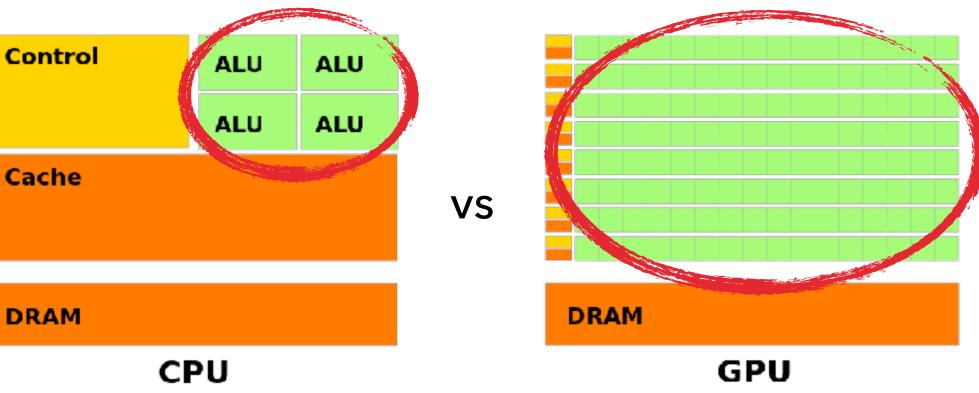

Can we improve the electrical power efficiency of scientific software applications?

Investigation example: CPU vs GPU execution

- GPU means highly parallel Cache processing on O(1000) compute cores (vs CPU O(10)) DRAM
- the application by factors of 100s

To address future computing needs HEP applications are being ported to processing on graphics cards (GPU) in addition to optimisations for "traditional" CPU processing

Depending on application type and complexity can increase the data throughput of

HOW

Scientific data processing software applications

The artefacts for the power consumption measurements

- Detector simulation
- Experiment high level trigger
- Machine learning algorithms

Can run on various CPU (Intel, IBM Power, ARM) and GPU (Nvidia, ARM, Intel) hardware platforms

- CERN computer center - HPC sites (Jülich/GE, Cineca/IT, ...) - CERN Openlab

Project plan:

Hardware infrastructure

Computing infrastructure to perform the measurements on

Provide all necessary hardware platforms we want to use

Software infrastructure

Software tools to perform, store and analyse the measured data

- Measure power consumption
- Store results centrally
- Plot and compare data

Available via HEPIX benchmarking working group and IT-FA

1. Connect the scientific software applications, the software infrastructure and the hardware infrastructure 2. Execute and collect the electrical power measurements of the applications on different hardware platforms 3. Analyse the data and publish general guidelines for power efficient execution of scientific software applications

Embedded in:

- Madgraph software development team (IT-GOV)
- HEPIX benchmarking team (IT-GOV)

1 technical student

1 year

Collaborates with:

- CERN Openlab
- IT computer center infrastructure team (IT-FA)
- AdePT / Geant4 development team (EP-SFT)
- HPC centres (Juelich/Germany, CINECA/Italy, ...)
