

Pi0 and photons discrimination Tutotial #6

Clement Helsens KIT

Tutorial description

- Using full simulation inputs from the previous tutorial
 - Sample of single photons and single π^0 s
- Within FCCAnalyses learn how to:
 - Select the calorimeter cluster of highest energy
 - Get the list of cells associated to this highest energetic cluster
 - Build collections of cells observables (energy, theta, phi, radius, layer)
 - Transform those collection to call state of the art Deep Learning
