

Cosmology

HST2024 Study Group 8

Curriculum & Classroom Connections

Key Ideas

1) Expansion of the universe

- Hubble (-Lemaître) law 1929 (1927)
- **velocity** = $H_0 \cdot \text{distance}$

redshift

Georges Lemaître

Velocity-Distance Relation among Extra-Galactic Nebulae.

age of the Universe $\sim H_0^{-1} \sim 14 \cdot 10^9 \text{ y}$

HISTORY OF THE UNIVERSE

Key Ideas

5) Gravitational waves

- way to see into the early universe

Theory of Big Bang

2) Bang

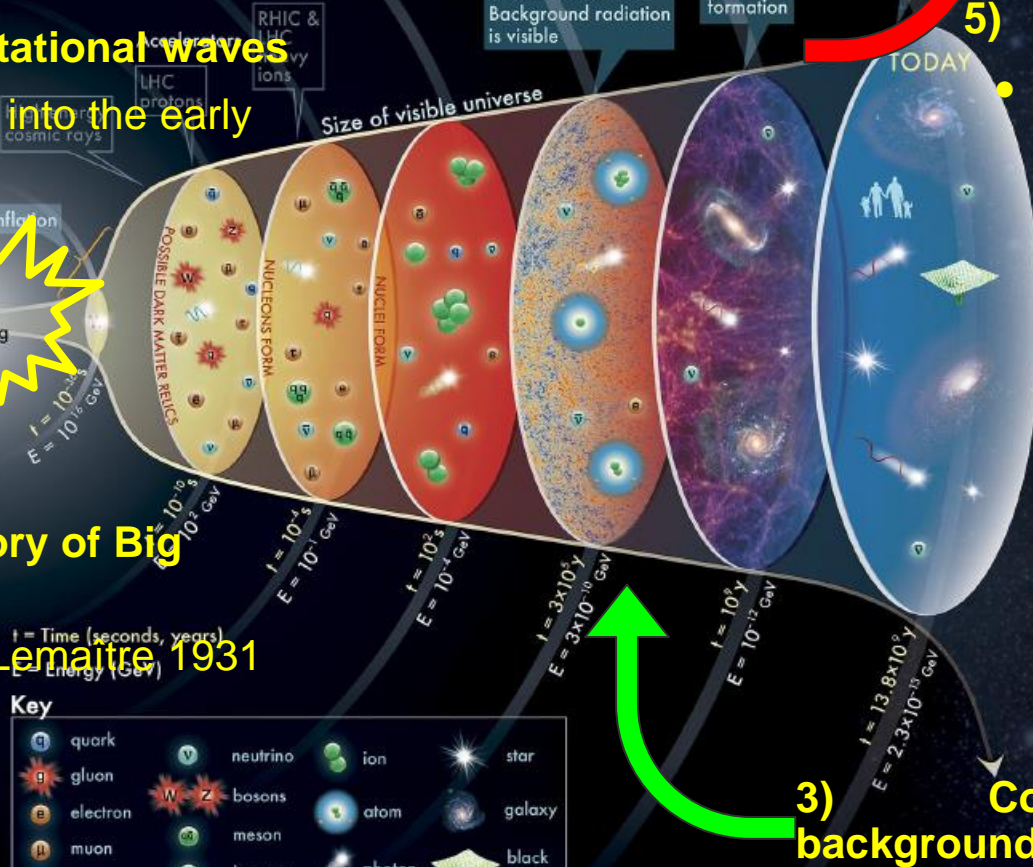

- Georges Lemaitre 1931

t = Time (seconds, years)
E = Energy (GeV)

Key

	quark		neutrino		ion		star
	gluon		bosons		atom		galaxy
	electron		meson		photon		black hole
	muon		baryon				
	tau						

Dark energy

- leads to a repulsive force accelerating the expansion of the universe

4) Dark matter

- galaxies rotating at speeds too big for its observable mass to hold them together

3) Cosmic microwave background

- Penzias & Wilson 1965

Potential Students' Conceptions & Challenges

How do my students think?

- Spatial
 - Three dimensional view?
 - Four dimensional?
- Time
 - Real time view of the sky?
 - Everything in the sky is dead
 - A window to the past
- Nature of Science
 - Scientists know the truth
 - No one knows anything
 - Religious/Cultural views
 - Evidence/Theory developments

Background image

Activity: Exploring the Cosmos with Supercomputers

What are my challenges?

- Language
- Cultural References
- Prior knowledge
 - "Knowledge voids"
- Scientific Skills

[Dark Matter Explained](#)

Helpful Material & Resources

Educational Resources:

Books:

1. THE COSMIC CODE-A Journey to the Origin of the Universe- by Sophie Domingues-Montanari
2. Cosmic Evolution: The Rise of Complexity in Nature by Eric J. Chaisson
3. Cosmology by V. A. Rubakov, <https://arxiv.org/pdf/1804.11230>

4. Introduction to Cosmology-A. D. Dolgov

<https://www.e-booksdirectory.com/details.php?ebook=4114>

5. Advances in Modern Cosmology- by Adnan Ghribi

<https://www.e-booksdirectory.com/details.php?ebook=6400>

Online Courses:

[Esa Cloud Chamber Activity](#)

[National Geographic 5 min Video Origin of Universe](#)

Best Practice Example

1. Online Lab: Hubble's Law and the Expansion of the Universe

Objective: Students will use real astronomical data to calculate the Hubble constant and estimate the age of the universe.

Procedure:

1. Access an online database of galactic distances and recession velocities
2. Plot the data on a graph (distance vs. velocity)
3. Calculate the slope of the best-fit line to determine the Hubble constant
4. Use the Hubble constant to estimate the age of the universe

Analysis:

- Discuss the relationship between distance and velocity
- Compare the calculated Hubble constant with current accepted values
- Explore the uncertainties in the data and calculations

M

- <https://www.golabz.eu/lab/hubble-s-law>

(the Go-Lab simulator is an interactive tool that can help students grasp the fundamental principles of Hubble's Law)

- <https://www.merlot.org/merlot/viewMaterial.htm?id=75282>

(for a more comprehensive lab experience, this resource provides a structured lab activity that guides students through the process of understanding and applying Hubble's Law)

Best estimate

72±8 (km/s)/Mpc

(Hubble telescope 2001)

67.8 ± 0.8 (km/s)/Mpc

ESA Planck Surveyor

Best Practice Example

2. Galactic Rotation Curves Activity

Use this activity to demonstrate evidence for dark matter:

- Show students rotation curves of galaxies
- Explain how the observed rotation speeds of outer stars don't match predictions based on visible matter
- Discuss how dark matter explains this discrepancy

Critical Thinking Exercise: Dark Matter Candidates

Engage students in a discussion about potential dark matter particles eg WIMPs (Weakly Interacting Massive Particles) and MACHOs (Massive

Research Project: Current Dark Matter Experiments

Assign students to research and present on current experiments searching for dark matter, such as:

Xenon Dark matter experiment

<https://xenonexperiment.org/>

LUX-ZEPLIN (LZ) experiment

<https://lz.lbl.gov/>

What we'll tell our students we did in CERN

Dirac was not happy

What we actually did!

But Feynman knew the path
