

SSB Feedback

Alessandra Forti

Atlas S&C Week

5th April 2011

Site View Feedback

- As a site admin I don't use it much
 - Shifter dashboard has more information
- I do distribute it to the users though
 - Has the right amount for them and it seems to satisfy them
- Minor changes
 - Order of the columns could be more logical
 - How many sites have two names?
 - Mostly two are redundant
- Following two slides are applicable to Site View too

Navigation and Search

- All listed sites by default not only 25
- We really don't need 2 scroll bars
 - The Browser one is enough
- The search is a very good feature
 - Could be less complicated
 - just search for a case insensitive substring
 - Example gstat search
 - <http://gstat-prod.cern.ch/gstat/summary/Country/UK/>
- Other than that the page contains everything I want to know and I can easily reorder by column

Links Content Feedback

- Can click to access additional information: Great!
 - Unfortunately most links are not yet very useful or are unreliable
- Examples:
 - Click on downtime goes to the AGIS twiki
 - Better to go to the calendar <http://atlas-agis.cern.ch/agis/calendar/?print>
 - Click on panda status and goes to the cloud status
 - Better the site page <http://panda.cern.ch/server/pandamon/query?mode=site&site=UKI-NORTHGRID-LIV-HEP>
 - Click on the SAM tests and goes to the tests selection page rather than the graphical display
 - DDM blacklist should go to DDM blacklist
 - http://bourricot.cern.ch/blacklisted_production.html

Conclusions

- Site Status dashboard and in particular the Shifters View respond quite well to a long standing requirement to have a single point of entry that display the status of the Atlas grid.
- I'd have some navigation and search adjustment
- My major grudge is with the access to the information behind the scene.
 - As a shifter I know where to go anyway
 - But the dashboard should make this easier
