(I) Recent Physics Highlights from the ATLAS Experiment

Monday 19 June 2023 16:00 (30 minutes)

The ATLAS experiment recorded 140 ifb in the LHC's \sqrt{s} = 13 TeV Run 2, and the analysis of this high-quality and well-understood dataset continues. Canadian physicists are involved in all aspects of data analysis, from the trigger systems to reconstruction to physics results. Recent results, including highlights from Higgs properties and precision measurements of the Standard Model, as well as searches for new physics, will be discussed.
